I'll second that.

Also, after you get your license and feel a desire to communicate,
try to be considerate of what you're doing and how much interference
you'll be causing on all those repeater inputs..if you feel a
compelling need to communicate on the ham bands while you're
flying, be a little considerate and do it direct. You certainly
don't need a repeater when you're at 5000 feet!

6. Recruiting Elmers from the Internet

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-01 00:00:00 UTC
From: pschleck@gonix.com
Message-ID: <pschleck.796747779@gonix.com>
Source record: 249283
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.antenna,rec.radio.amateur.digital.misc,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.policy,rec.radio.amateur.space

As readers of the rec.radio.amateur.* newsgroups are probably aware, I maintain a periodic information posting known as the Amateur Radio Elmers Resource Directory (aka the "Elmers List") which provides a list of net Elmers, indexed by topic, and their E-mail addresses. (For users of threaded newsreaders, this article is linked to the base article of the Directory itself).

As noted elsewhere, the Amateur Radio Elmers Resource Directory is 4 years old as of last month. In order to maintain its value to the net, I have strived to keep it accurate and up-to-date. In addition to reviewing the currency of the entire list every 2 years, I am constantly scouring the newsgroups for new Elmers to join the list.

There's always been an implicit invitation for any qualified person to join the list. However, since I've lost about 1/3 of the list due to attrition from my last biannual mass-ack (i.e., no response at their last-known E-mail addresses), felt the need to send out this explicit invitation. I'd like to replace the lost Elmers with new, motivated, quality Elmers from the net. Areas of expertise that are most desirable for the list right now include:

- Military Affiliate Radio System (MARS), particularly Army and Navy/Marine-Corps. MARS (as I currently don't have any MARS Elmers from those branches)
- Advanced homebrewing techniques (surface-mount, VLSI, DSP, spread-spectrum, etc.)
- TCP/IP Packet Radio and Gateways/Internetworking (particularly local IP coordinators and/or subnet managers/operators/leaders)
- Amateur Satellites/Space Operation (particularly Microsats and SAREX)
- Amateur-related Software for Unix/PC/Mac/Amiga/Psion/HP-95
- College Clubs and organizational guidance/strategies
- Boy Scout Amateur Radio Merit Badge Counselors
- Unix/Linux/X-Windows programming and configuration
- Amateur Radio Organizational Contacts (I am especially looking for contacts for the ARRL Field Organization, GRAPES, AMSAT, QCWA, QRP Int., NARA(?), QRZ, CSVHFS, LAMBDA, ARES, RACES, FEMA, any state OES or EMA, as well as any regional frequency coordinating body)
- Band, Mode or, Brand-specific equipment (actual manufacturer or dealer contacts would be quite welcome, as long as they reveal their affiliation and at least provide *some* free services)
- Maintainers of unique amateur-radio-related anonymous File Transfer Protocol (FTP) sites and World-Wide Web (WWW) Home Pages (as opposed to those that are substantially a rehash of, or pointers to,

existing sites).
- Maintainers of unique amateur-radio-related mailing lists
- Editors/contacts for amateur-radio-related publications

Although expertise in any other area would, of course, be welcome also.

I'd like to emphasize that participation is totally voluntary, with very minimal obligations (1 or 2 polite inquiries a month, if feedback from existing Elmers is any indication). If you find that it is too much work, you are welcome to bow out, no questions asked. In the 4 years I have managed the list, only a handful of Elmers explicitly resigned, and usually only because of severe professional or personal obligations, or their interests or expertise changed. You don't even need access to netnews, just a reliable E-mail address.

I've also attempted to seek out people on the net who I think would be good Elmers. If you've received a personal E-mail invitation from me, I urge you to give it serious consideration. The net would appreciate your volunteerism.

If you'd like to volunteer, or just discuss further what volunteering would involve or if your contribution would be desirable and fit within the Elmers List's mission and editorial policies, send me some E-mail to the Elmers list administrivia mailbox below (the default Reply-To: of this message; an autoreply daemon will respond with an acknowledgement message and I'll be in touch with you personally very soon).

7. AUDIO FILTER FOR AMATEUR RADIO

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-01 00:00:00 UTC
From: af4z@theborg.mlb.fl.us
Message-ID: <af4z.1gyq@theborg.mlb.fl.us>
Source record: 249284

Several years there was a filter project that was in QST, Ham Radio or other Ham magizine that was titled "SCAF" (Switched Capacitor Audio Filter). I would like to get a copy of the artical or similar. I am interesting in building a tunable audio filter but not the standard OP-Amp analog version. Has anyone had good results with DSP? I am not interested in spending $300.00 for a DSP but would be interested to know if sommeone has used the TI DSP TCM-320 eval. board unit with good results or similar.

8. W5 Area QSL bureau address

Newsgroup: rec.radio.amateur.misc

9. WASTED TEST BANDWIDTH / FOOLISH TEST QUESTIONS

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-01 00:00:00 UTC
From: ferret <ferret57@u.washington.edu>
Message-ID: <Pine.A32.3.91c.950401124445.39760F-100000-100000@homer10.u.washington.edu>
Source record: 249286

I am intersted to hear from others what your opinions are about the
current bank of test questions for the radio exams (VEC) are ....

I have been studying for the General, Advanced, and Extra.

Technically the stuff is trivial from a physics and engineering standpoint.

I think that there is, actually a fair balance in the theory section
between giving people technical knowledge and useful knowledge about
operations and technology.

I am not at all convinced that the questions about band allocation and
radiated power on various frequencies are anything of any value at all.

In fact I am sure that they are taking up "bandwidth" in the test that
could be better allocated to helping people learn and be tested on more
useful theory, procedural, and technical issues they would ebenfit from
knowing.

Frankly, who cares to remember frequency allocations and power and etc.
versus mode etc. Idiots task. I mean what kind of idiot is going to try
to remember ALL the allocations and mode matrix and if you can NOT
remember it ALL then you have to have a crib sheet anyway, so why bother
to remember ANY of it. USE THE DURN CRIB SHEETS AND MAKE SURE YOU AER
OPERATING LEGALLY...

IF we do this and teach this, ... then there is NO USE for asking people
to memorize useless stuff that they will HAVE TO have a crib sheet for in
operations anyhow...

And if they have found one or two bands and know their rights in those
bands and do not vary from them, then they only need to use the crib
sheet once to get started..

Lets NOT raise more barriers to entry by asking people to remember stuff
that is USELESS .. lets concentrate on giving people the best possible
preperation for operations and enjoyment by making the tests as
educational as possible.

Who will support me in a petition to have the VEC tests sterilized of
FREQUENCY / BAND / MODE / POWER BY BAND_FREQ QUESTIONS ?

IF you agree, PLEASE POSE TO ME AND I WILL FORWARD TO ARRL ETC ...

THANKS

David W. Rahfeldt PhD
Physicist

10. FS: Ranger 2950 and scanners

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-01 00:00:00 UTC
From: stew@sam.neosoft.com
Message-ID: <stew.27.0076A774@sam.neosoft.com>
Source record: 249287

I've got a few things for sale:

- One Ranger 2950 ten meter rig in absolute mint condition. Has instructions, documentation, all original brackets and accessories and original box. I am selling this radio as a package deal with a 250 watt 10 meter HF amp. This amp has a built-in pre-amp, and a toggle switch for SSB/AM operation. This amplifier may ONLY be used by a licenced amateur operator. You also get a high power SWR/power meter (up to 1000 watts) with mounting bracket. All this for $400.00.

- Pro-34 hand held 200 channel fully programable scanner. This scanner covers all the usual frequencies as well as 800Mhz. It is cellular restorable. $175.00.

- Uniden Bearcat 200XLT hand held 200 channel fully programable scanner. This scanner also covers all the usual frequencies and 800 Mhz. It is also cellular restorable. $175.00.

Please email me if you are interested in any or all of the above. Thanks!

Stewart

<snip>

I've seen more than a couple of cases of repeater jamming where the culprit has turned out to be someone who's held a position of respect and longevity in the local amateur community. And you're right, in each of these instances the acts that brough them infamy were very much out-of-normal-character for them, it seems.

The one chap I've ever talked with that was involved in one of these incidents blames it on 'those new kids' (of whatever age) who have changed his world from that in which he was comfortable and complacent, to a world where he didn't recongize folks... where he couldn't just pick up the mike and gab with one of his buddies without being interrupted by someone wanting to use the autopatch or wanting to call another station... where people were talking about things and using language that disturbed him. In short, he just got fed up, and decided that if he couldn't have 'his' repeater back, then no one would.

Sad, isn't it?

15. Delayed Echo on 15 Meter CW?

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-01 00:00:00 UTC
From: leigh@rain.org
Message-ID: <3lkmme$bpu@news.rain.org>
Source record: 249292

Today I worked a W4-land station in a slow speed CW QSO, in the 15 meter Novice band. I was in a parked car, using an elderly Atlas 210 into a whip. Conditions were weak, and most of the few stations I could hear were either W4 or South American.

On the last transmission from the W4 station, his CW developed a slight raspy buzz of an echo after each character. Thinking my voltage was too low, I started the car and watched the volt meter on the dashboard climb up to normal voltage, but the echo remained. At the end of the QSO I was afraid my old Atlas 210 had developed an audio or recieve problem, so I tuned in several other CW stations. All sounded normal.

Question: does this sound typical of the "delayed echo" sometimes observed on HF?

Thanks. --Leigh/KM6JE in Santa Barbara, California.

16. Re: WASTED TEST BANDWIDTH / FOOLISH TEST QUESTIONS

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-01 00:00:00 UTC
From: Gerald Schmitt <ggs@aerie.lanl.gov>
Message-ID: <3lkni6$dog@newshost.lanl.gov>
Source record: 249293

David,
I think you miss the point. If you pass a test on the band plans
and the rules and then don't follow them you have established that
you knew the rules and therefore are responsibile. It is a "logical"
outgrowth of having lawyers on the planet. All of the tests are a little
physics and a lot of fluff. The only thing left that requires real
work is the code and look at the bitching about that. By the way the
fact that you have a test pool to study from; the lawyers did that
for you. A court case decided that such stuff was public information.
It wasn't always this way but it is this way now and I don't think
much will change.

: We've been told that this is not the case... That Micors in the ham band
: frequency range are few and far between (we have been looking for one
: at the ham swaps) and go for quite a lot more than $50. We've also
: been told that to change the frequency of a Micor amp involves more
: parts changing than it's worth.
If you feel that the RF decks aren't compatible, than swap out the
transistors. The lower the frequency, the more efficient the transistor.
If it works well on 150 to 170, it'll work great on 145. Same on 450.

Now might be the time to switch to GE. :)

> anything but like I said ... I'm new.

Probably not for you. If ready money is tight, look at QST on the newsstand
and buy when you see something you need to keep. I guess large municipal and
college libraries also carry it to read for free.

Use your limited resources to best enjoy the hobby, and don't do anything
because someone says it is *the done thing*. I do hope that you will feel
like joining and it will become more afordable to you when you're more
established in your career.

Yeah, I don't get it either. I didn't think I could miss the boat this
badly genetically. Maybe it's from all that low level RF I have been
subjected to. :-) .

Seriously, I don't understand your argument or your comment on race.
Perhaps you would be kind enough to explain a bit more?

Unfortunately this database, like many others on the WWW are easier to set up than to maintain. The data in the files on this server have my email address from 1993... Way out of date by this point. My wife's data is also quite out of date.

So, it's a nice server, but the data's stale.

I happened to be thinking about this the other day. I am a new ham
who is planning a long road trip in the near future. I was thinking
about getting a license plate frame (or a window sign) announcing
that I am monitoring 146.52 looking for contacts from other hams.
Would this be effective? I will be alone, so I don't feel comfortable
scanning for repeaters and having to fiddle with offsets/pl's, etc.

If my method is not effective, any suggestions? I am interested
specifically in something that will attract the attention of other
hams without announcing to every thief in the universe that I have
several hundred dollars worth of radio equipment in my vehicle... :)

73's,

Doug

Gandalf.... YES, in my opinion it is worth the money. Dispite some words to the contrary, they (or should
I say us) have done more to save the frequencies we possess from commercial enterprises and other
frequency hungry spectrum users than any other organization around. Their magazine is a first-class
publication and their member-services are superb. I've been a member during the majority of my ham
career (since 1960) and have not regretted sending in my hard earned bucks! NO, I'm not an ARRL
employee or salesman, just a satisfied "customer". By the way, you DID NOT ask a stupid question!

Let me invite both of you guys to Jeff City sometime. We're a small town
of 35,000 but our ham club has 40-50 members attend most of the time, a
wide-open repeater with anyone welcome, and nobody talking about Medicaid
or colostomies (I'm a doctor and hear enough of that during the day!) We
even have a few high school and college students on the air. I've
traveled to some places with ham groups like the ones you're unfortunate
enough to be associated with, and I always look forward to coming back
home. If you're in central MO sometime get on 147.00/-0.600 and give us a
holler..... 73 Alan NS0B

I agree that becoming a League member is a good deal, however, it
is precisely because of the politics that it is important to be
a member. If you aren't a member, you have no say in the way the
organization works, or the way it presents amateur radio to
government regulators. Since the ARRL is the largest voice in
amateur affairs, it's important that you have a role in shaping
that voice.

That's not the sort of situation repeater licensing addresses. When you held a repeater license, it was good for the normal amateur term *whether you put the station on the air or not*. Coordination is a totally separate issue. I don't know how your coordination body handles it, but SERA revokes any coordination that isn't active for six months.

35. Superconducting Antenna

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-01 00:00:00 UTC
From: slay@netcom.com
Message-ID: <slayD6BytB.GwB@netcom.com>
Source record: 249494

Here's a letter I received previously. I also posted it on the Usenet Newsgroup: rec.radio.amateur.antenna last year (around 1 April, as I recall)..... thought others might like to read it again ... so here it is.

73 de, Sandy WA6BXH/7J1ABV Portland, OR slay@netcom.com

==========

I recently received a letter from an old friend, Joe Speroni AH0A/7J1AAA, who has been living and working in Japan for many years. He is also the author of the well-known MORSE ACADEMY software for teaching Morse Code. Anyway, it was such an exciting letter that I thought it would be of interest to other readers.

Dear Sandy:

I have been working on a series of articles on Japanese amateur radio, but there is something so exciting I just have to take a break and tell you about it.

It all started with the work that Ed Coan (AH6MI/7J1AAE) did on antenna pattern plotting using his personal computer. The circular, and even backward antenna patterns of some of our local TIARA club members brought home the point that what a good station needs is a good antenna. Ed's antenna looks great and the results verify it. He works regular schedules into Colorado and Maine, just like sunspots don't mean anything. My mini-beam just could not compare.

Well, I got to thinking about what we apartment dwellers could do and realized that space is THE problem. How do you fit a full-sized beam on a balcony? Loading coils are the answer and the problem at the same time -- the antenna radiation resistance drops as reactance is substituted for length. High current loops develop and the power is dissipated in the antenna instead of being radiated. If only the antenna didn't dissipate the power. Hmmmmmm....let's see, P=E*E*R; if R were 0 then......

From my work, I have some contacts in research groups over at Tokyo University. Better yet, I knew a Japanese ham who is a graduate student there. The thought running through my head was to build a super-conducting antenna. This requires cryogenics, i.e. temperatures around minus 279 degrees Centigrade. I was able get the university folks interested in the project and we built a 10 meter dipole test silicon wafer. They put together a lot of serial coils on the wafer and by "re-work" on the wafer, they were able to connect them so we had a super-conducting dipole. I took my TS-930 transceiver down to

the lab for the first tests, but before we could test it, actual measurements showed it was resonant on 3126 KHz.

It seems that the normal equations for inductance don't work with super-conducting materials -- you need a lot fewer turns to get the same results than at normal temperatures. Many measurements and trials later, we had a ten meter resonant wafer. This time we put a pair of 40 element beams on each wafer and stacked 4 wafers in the same assembly. That made a 320 element array on 10 meters in less than a half-foot (15 cm) cube.

The first test didn't go too well. I connected my old TS-930 to the super-conducting wafer antenna and tuned it for 10 meters. At room temperature, we couldn't hear anything. Using a heat pump, the lab technicians started lowering the antenna's temperature toward the super-conducting region. I was really impressed by how small the equipment is, and started thinking it might all fit in the shack. Just then, the TS-930 froze solid, which had a negative effect on its operating characteristics. This wouldn't be so easy after all; the coax connection would need some study.

We reworked the wafers to put inductive coupling on them, but I could find no way to efficiently couple to it from the conducting ceramic material that passed RF but not heat. Probably, something that Kyocera inventedjust for this use. I sent the TS-930 over to the ham shop in Akihabara and asked them to touch it up for me. Suzuki-san (service manager at the ham shop) asked exactly how the paint had been peeled off around the coax connector -- lightning maybe? No, I assured him -- just low temperature exposure, without saying how low the temperatures were. The project had to stay secret and besides, Suzuki-san can repair anything.

Since it looked like it might be a while before the TS-930 would be repaired, I brought out my TS-940. I had already placed an order for the Yaesu FT-1000 anyway. After verifying that in the super-conducting range the antenna was resonant on 10 meters, we connected the TS-940. The ceramic material worked and the rig operated well even as we began the cooling cycle. The band seemed dead even with the antenna at -150 degrees C. It took another 10 minutes to get to the super-conducting range -- then the TS-940 blew up. It seems our antenna had a bit more gain than the TS-940 front-end could take. Later, with 100 dB of attenuation, measurements showed 5 volts coming out of the coax. A little hard to believe, but then what do I know about cryogenic LSI antenna technology?.

The TS-940 was also returned to Suzuki-san, but this time he frowned a bit -- the front-end board did look like it had been hit by lightning. Not to worry, Suzuki-san can repair anything.

My new FT-1000 arrived just in time to be able to continue the experiments. We built a QSK attenuator to protect the receiver and with the LSI wafer antenna still inside the lab, decided to

try to make a contact on 10 meters. Boy, what a shock when we got it working. The first thing we heard was a couple of W2's talking locally on 10 meters and that was with 80 dB of attenuation. We had the antenna array on a rotatable mount; I moved it about 1 degree and the W2's disappeared. What beam width. We tuned them in again, and they were just about to sign off, so we thought we would try to work them. The rig was tuned up at 50 watts on a dummy load; we switched in the wafer antenna and gave N2BA a call. The noise was unbelievable -- an ionized ray shot out from the antenna and hit the wall of the building. Before we knocked a hole in the band, we took out a piece of the lab wall. Ever wonder what an antenna pattern looks like in three dimensions? There was a small round hole in the wall of the lab -- about 1 cm in circumference.

We cut power quickly. N2BA came back on frequency a few minutes later and said he was using his back-up rig; something had taken his main rig off the air. For some reason, the station he was talking to never came back, and so we decided not to transmit again until we knew for sure what was going on.

As near as we can tell, the antenna array has 120 dB gain over a dipole, but with a beamwidth of 0.75 degrees using the 60 dB points. With 50 watts output, the effective radiated power is 55 quadrillion watts at the center of the beam (5.5 with 13 zeroes). As soon as the University realized what we had built, the entire project was taken away from us and turned over to the Japanese Self-Defense Forces (military). Amateur radio "tinkering" has contributed to something, but I am not exactly sure what. I haven't the slightest idea what was in those wafers or how to explain how to build another set. But what I'd give to use a smaller set in the next CQ World Wide Contest.

Do you think someone may be interested in this idea for Star Wars/SDI??

A few months later, the University contacted all of us and asked just how close we had been to the antenna when operating. As best as I can figure, we were in the null behind the array. From what has been said so far, it looks like a secondary use for our antenna may be as a mass sterilizer, but confirmation will have to await the results of the medical tests. If our antenna ever hits the market, it looks like remote operation would be desirable.

As I am writing this, I have been informed that Suzuki-san can't fix everything after all. He's written off the 930 and 940, and I just found out that before the university terminated the project, they tried one more time with my FT-1000, but without the 100 dB attenuator to protect the receiver. It's front-end now matches the 930's and it looks like it will be awhile before I am on the air again. Maybe Yaesu will announce some new models soon.

DTI is closing out a subnotebook a Lexbook MB10 or MB15 that is perfect for portable packet.The closeout price is $200.00 plus shiping. The subnotebook measures 10'x 6.5'x 1.3' runs off of 6 AA cells or external 12 volts.(No hard drive or disk drive, DB9 for serial port, DB25 for printer port) I have packed the MB10, Kenwood TH-27 and KPC 3 and a 12v 1.2Ah sealed lead acid battery in a 13' x 10' x 2' plastic pencil case and it works fine with the built in software. Adjust the terminal side of the TNC/Computer for 4800 Bps as the 9600 bps setting on the MB15 sometimes misses characters.

I am using this portable setup for Thons and such.

DTI phone number is (617) 326 4100 and they usually advertize in Computer Shopper.

RD> I think that folks gotta realize that contests do not take place more
RD> often than not. Sure, clubs likethe Southwest Slobovia ARC may sponsor a
RD> QSO party most every weekend of the year,
RD> but there are only a few weekends where major contests attract large numbers
RD> of operators.

This may be true for the US but here in Europe, I'm afraid to say, the
situation is much different. Just try to maintain a regular sked on an
early Sunday afternoon on, say, 40 m, a band which, as you will be aware,
is a mere 100 kHz wide, over here.

Add to this an incredible inflation of contests brought about by the fact
that every local village radio club in Eastern Europe wants to sponsor its
own contest and the whole lot from the same region joining in on each of
them, you have some kind of band-busting event almost every second sunday.

Thank whatever higher being you like for not being close enough to this
to know what real flat-topping from a hopelessly overdriven Russian
'linear' does to those poor souls who just happen to want to exchange a
bit of weekly information beyond the mindless limits of 'five-'nine'
and a serial number.

This is a topic sure to generate argument. However the consensus of
the equipment manufacturers and savvy radio installers is to connect
directly to the battery with both the positive and negative lead.
Both leads must be *fused* near the battery. This is essential
for electrical safety. Since the wiring has to pass through the
firewall to reach the radio, a short there could cause a fire.
A fuse in the negative lead is required because a failure of the
engine ground strap can cause starting currents to attempt to
flow *through* your radio to start the car. The circuit traces
in your radio aren't designed to handle 200 amps, and your radio
will smoke.

There are several reasons to wire the equipment this way. The most
important is to prevent shared currents flowing in the radio power
circuit. These can cause noise, hash, and interference both with
the radio and with the vehicle control electronics. Connecting
directly to the battery eliminates these common currents.

Most radios do not come with wiring heavy enough for this job.
You should use at least #10, and I'd prefer #8, wires from the
battery to the radio. This reduces the voltage drop to the
equipment. Most amateur equipment begins to get very squirrelly
when the input voltage drops below 12 volts, and output power
drops sharply when the voltage goes below 13.8 volts. So if you
are parked, you may not have enough voltage if you don't use
heavy wiring. With the engine running, you'll have nearly
14.2 volts at the battery, and usually at least 13.8 at the
radio if you use good heavy wiring. This depends on the current
draw of the radio, of course. A radio that only draws a couple
of amps is going to be less demanding of heavy wiring than one
that draws 10 or 20 amps.

Pay particular attention to the wiring terminations. Even heavy
wiring can be undone by poor, high resistance, terminations.

Crimp *and* solder connections. With side post batteries, a ring terminal under the post bolt will do for connections under 20 amps. For top post batteries, a ring terminal under the clamp bolt nut will suffice. For high current radios, there are special intermediate connectors that should be used.

Despite running wires directly to the battery, you should *also* supply a short direct RF ground connection between the radio chassis (not the negative lead, the actual metal chassis) and the vehicle body. This won't cause common currents because it's shorted at DC by the direct negative lead that goes to the radio circuit board, but it's necessary for good RF grounding, and in case of a vehicle lightning strike or contact with live AC wiring. Needless to say, the antenna base should also be securely grounded to the body via its mounting hole. These connections may have to handle a 2000 ampere surge in the case of a vehicle lightning strike, so do these right.

(Note, vehicle lightning strikes are rare, but they do happen, and vehicle antennas also occasionally contact live AC power wiring, including that of fluorescent parking garage fixtures. Code requires a metal shield over parking garage fixtures, but it is often missing. Your antenna can easily contact the 110 VAC in this case. Don't let your radio, and you, be the current path. Maintain the integrity of the Faraday cage formed by the metal vehicle structure by grounding that coax at both ends.)

Well, sick people have been "mainstreamed" back out onto the streets
rather than being confined as they should be, so this problem is only
going to grow. Most repeater clubs have a tech crew with DF experience
to deal with these problems. And there's the ARRL OO and AA programs
which can help as well. The real problem is what to do once you identify
the sickos. It's unlikely they can be hauled back to the asylum in today's
social climate. If they're licensed, the FCC *may* decide to get involved,
but their resources are small and dwindling. Most likely, you'll have to
take direct action, and that can carry both physical and legal risks.
The first step should probably be a protective restraining order from
a local magistrate. If that fails, stronger action may be required.

Since these mentally challenged individuals are usually seeking
attention, simply ignoring them will often cause them to go
elsewhere. But then they'll just try to bother someone else.
You can "let George do it", or you can try to deal with them
yourself, but *never* engage them in argument on the air. That's
what they want. Hunt them down and deal with them in person.
Don't confront them alone, however, as they may tend to be
violent. Use of a rope is optional, but hoods are mandatory.

>with something less directional until I figure out with whom I'll communicate?

Most serious 10 GHz work today is done with crystal referenced narrow
band equipment. However, a good way to get started is with a pair of
gunnplexers. Activity is low enough that you need *two* stations to
start out. Otherwise you may find no contacts. Since power is almost
always low on 10 GHz, directional antennas are essential. Dishes are
almost universally the way to go. A 2 foot dish is a good place to
start. Bigger dishes can be used as you gain experience.

Naturally, the ARRL has a book, _The ARRL UHF/Microwave Experimenter's
Manual_, and the RSGB has a two volume set called the _Microwave Handbook_.
These will be useful references. There are also conference proceedings,
such as _Microwave Update 91_ that can be of use.

>does SSB ele. only have one freq. 10gig xverters or is that the only freq on
>10ghz?
>who else has more range and cheaper 10 ghz radios?

SSB Electronics' transverters are certainly expensive, but they are
of high quality. Several factors are responsible for this. First,
there is a very low volume demand for this sort of equipment. Second,
the equipment uses some mildly exotic parts. And third, the mark/dollar
ratio isn't in our favor.

As to frequencies, see the ARRL bandplan. Since activity is so low
on 10 GHz, most amateurs tend to congregate around a small band of
frequencies so they can find each other.

Much of the 10 GHz activity is based on converted surplus equipment.
That can be very cheap if you are lucky enough to come across some
of this equipment. And, of course, the wideband gunnplexer route is
very inexpensive, though naturally performance is rather limited.
Many amateurs find they have to scratch build their own equipment.
That's not terrilbly difficult, and there are some published circuits.

You will find the rules for most contests in the prior month's magazines.
QST and CQ magazine both provide good listings of the magor contests.

In any given contest, feel free to call someone back who is calling CQ, and
ask them what the exchange is supposed to be. Most contesters are happy to
tell you that info, and count you as a point (or more). Despite the sound
on the air, contestors are a friendly group, just enjoying a little competition
and skills-honing session!

Gary although I can't give you any calls in particular, I know there are
many. There are several on the two meter machine here in Atlanta and they are
constantly coming through on there way to various destinations.

Unfortunately many truckers have recieved a "bad rap" from what I refer to as
the "renegade trucker". You know the type I am referring to. Alot of times
a trucker will not tell you who he is or what he is doing due to the fact he
is afraid of being insulted.

Keep up the good work out there and please be careful. The life you save may
be mine......:)

de NA4G, "Boat Anchor Bob", an ol' cw fart .....

If I can be of assistance in older equipment, junk-boxing
your way to hamdom, the cheapskate's approach, let me
know.

22 yrs a ham, extra class, mostly cw, mostly boat anchors
and radio in the traditional sense.

{Telegraphy has been in my family for almost 100 years!}

CWISTS Friday Night Fist Function

Standard time: Friday Nights at MIDNIGHT LOCAL TIME

Standard freq: 80 meters --- 3702.5 khz for all hands.
40 meters --- 7102.5 khz alternate, for all hands
(between the heterodynes)
(someone scout out a better QRG)

Standard calling signal: CWIST IMI DE <yourcall> K (if there
are no control stations calling for
you to check in), or,
CWIST DE <yourcall> K (if there is a
control station inviting checkins)
(The alternative check in for those OTs
with salt behind the ears is a simple
DE to get the control station's ears
followed by DE <yourcall> K when the
control station acknowledges.)

Note: A simple informal net style protocol will generally be
used, unless no control station assumes control for the
evening, in which case it is an open roundtable format
discussion group.

Note: The midnight local time gathering is designed to maximize
the number of checkins spread out over the world, so less
confusion and more checkins are heard. The hope is that
someone will be aboard almost anywhere and be heard at
least locally, anywhere in the world.

Definition: A CWIST is a person with an active interest in the PRACTICE
and USE of continuous wave radiotelegraphy as directly is
applicable to amateur radio. Such PRACTICE and USE may
take the form of learning about radiotelegraphy and its
history in amateur/commercial areas, its application to radio
telecommunication, the practicing of the art and craft of
radiotelegraphy, and the refining and developing of the
technology of radiotelegraphy.

Author of NA4G's National Electrical Code for Hams

ABSTRACT

This work was presented as a talk to the Homebrew Special
Interest Group (HB-SIG) of the Raleigh Amateur Radio Society
(RARS), on 15 January, 1991 and was revised for another
presentation on 26 January, 1994.

This document contains excerpts of the National Electrical
Code (NFPA 70-1990) that, in the author's opinion, apply to
the installation of amateur radio equipment as would
commonly be found in most amateur radio stations. Direct
excerpts from the Code are contained within inset
quotations. Paraphrased excerpts from the Code are
itemized. The author's interpretation and discussion of the
Code is set full-width. The author's interpretation and
discussion of various sections of the Code is not meant to
be all-encompassing, nor the official interpretation of the
National Fire Protection Association, nor of any official

governing body having legal authority of jurisdiction over
electrical installations, but is meant to be used as a
teaching tool for amateur radio operators.

For ease of access, the group of files have been 'rolled into one'...

Maintainer of rec.radio.amateur.misc and rec.radio.cb FAQ lists

Available from:

http://www.cis.ohio-state.edu/hypertext/faq/usenet/radio/ham-radio/faq/top.html
ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/faq/

and

http://www.cis.ohio-state.edu/hypertext/faq/usenet/radio/cb-faq/top.html
ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/cb-faq/

Please direct all FAQ submissions, feedback, and administrivia to
hamradio-faq@kluft.com or cb-faq@kluft.com.

As with any volunteer effort, new volunteers are often needed. We need
new editors to post the above FAQ's. Preferably this should be someone
who has enthusiasm for hobbyist radio, experience with UseNet, and the
ability to work with the other editors. No single person can know all
the various aspects of these diverse hobbies so the editorial review
groups are intended to make a greater combination of experience.

The FAQ's are currently posted with the AUTO-FAQ software, which is
written in Perl. So it would be a plus for volunteers to post the FAQ
to have Perl installed on their system and be able to use "cron" or "at"
so that postings can go unattended.

Anyone who wants to make their contribution to the Net as a volunteer
should contact one of the above administrivia addresses.

A mailing list for rec.radio.amateur.* FAQ and Netiquette posting
maintainers, as well as anyone with a sincere interest in helping keep
the rec.radio.amateur.* newsgroups the friendly and useful forums they
are today, is also available. To subscribe, send E-mail to
rra-wg-request@amdahl.com.

FAX : +1 410 661-0644 | Baltimore, MD 21236
PACKET : WB3FFV @ WB3FFV.MD.USA.NA |

HOW TO ACCESS THE WB3FFV AMATEUR RADIO INTERNET BBS !!!

I have placed a BBS system on-line that is mainly oriented towards the Amateur Community (but there are plenty of other wares on-line). Through user support I hope to keep the latest and greatest ham software on-line. The BBS also offers access to nearly all of the Internet (USENET) NetNews groups, plus access to most Internet services such as Email, FTP, TELNET, Gopher, WWW, Callsign Lookup, Etc... Below is the information that is needed in order to access the BBS via Telephone, Telnet, or FTP. Please pass it around to as many ham's as possible.

System Name: WB3FFV
User Login: bbs

+1 410 661-2475 - 12/24/48/96/14.4/16.8/19.2/21.6/28.8
(V.32bis,V.32terbo,V.34,V.FC,HST,V.42bis)

+1 410 661-2648 - 1200/2400/4800/9600/14400/23000
(MNP2-5, V.32bis, V.42bis, Turbo-PEP)

TELNET/FTP - wb3ffv1.sed.csc.com

Data Settings: 8 Bits, NO Parity, 1 Stop Bit
Times: 24hrs/365days (except for routine maintenance)
Software: UniBoard UNIX BBS Software (Version 1.30b)
Misc. Info: Machine is an Pentium-90/MP running UNIX System V Release 4.2 and features more than 4 Gigabytes of on-line file storage.
Most transfer protocols are available!! (5 phone lines)

I attempt to keep the latest and greatest HAM software on-line, and encourage all to upload anything new that they come up with, as it is of benefit to all. Here is a sample of the software that is available for downloading:

KA9Q TCP/IP Software for the PC (Latest OFFICIAL release + TEST Versions)
KA9Q TCP/IP for the Atari-ST, MAC, & Amiga
KA9Q TCP/IP for UNIX based systems
KA9Q TCP/IP (The NOS release) [UNIX, MS/DOS, Amiga]
KA9Q TCP/IP (Version by G1EMM, PE1CHL, PA0GRI, Etc.)
N2GTE Packet Message Switch [GTEPMS]
WA7MBL BBS for the PC
W0RLI BBS for the PC
MSYS BBS for the PC running KISS TNC's
AA4RE BBS for the PC (plus BETA versions)
F6FBB BBS for the PC
G8BPQ PC-Node (Version 4.08)
Various BBS utilities and enhancements
Several MORSE CODE Tutors
TheNet software by NORD><LINK
Modifications for many HAM Rigs and Scanners

Digital Signal Processing software (DSP)
DX and contesting programs

If you are interested in using UUCP to connect to the BBS, this can
also be done as I support Anon-uucp. The login to the system is
'uucpanon', and there is NO password. The listing of avalible archives
are stored in a file called 'FILES', and it is located in the
/var/spool/uucppublic. To retrieve the files listing just use the
following command:

uucp wb3ffv!~/FILES /usr/spool/uucppublic (ASCII Text)
-or-
uucp wb3ffv!~/FILES.Z /usr/spool/uucppublic (16-Bit Compressed)
-or-
uucp wb3ffv!~/FILES.gz /usr/spool/uucppublic (GNU Gzipped)

This will move a copy of my file listing into your uucppublic
directory.

If you want to access the BBS via Telnet, all you have to do is TELNET
to wb3ffv1.sed.csc.com, and login is 'bbs' with no password required.
To use anonymous FTP, just ftp to wb3ffv1.sed.csc.com and login as
'anonymous'. This system is currently attached to the Internet via a
dialup SLIP link, and should generally be available 24hrs, but at
times the modem will drop the line. Also, since this isn't the fastest
link, I will be limiting the maximum number of anonymous sessions for
the moment.

ampr.org IP Coordinator for Maryland Subnet (44.060.xxx.xxx)

[Editor's note: All ampr.org coordinators are listed in the document
at:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/ampr_coordinators

]

If you have any questions or problems, feel free to contact me at one
of the numbers/addresses above. Good Luck...

Dean R Madsen, KE0WO Computer Science Major
Internet: dmadsen@iastate.edu Iowa State Univeristy
ke0wo@iastate.edu Ames, Iowa
AX25: KE0WO @ KE0WO.#NWIA.IA.USA.NA
Secretary for the Tristate Amateur Packet Association
Treasurer for the Cyclone Amateur Radio Club

A few members of our ham radio club were interested in helping out.
Since our turnover is usually 4 years or so (graduation is a horrible
thing), I thought it may be difficult for us to keep the list up to

date. I thought that by creating a local mailing list called "elmers@iastate.edu" we could add or remove people as need be. There would always be at least one person receiving mail on that list, usually more! Even after I graduate, this list will be maintained allowing ISU hams to easily help others.

Currently we have people with packet experience, some HF experience, much repeater experience, in addition to a considerable background in theory, as many here are electrical engineering or computer engineering students. If a question can not be answered by the readers of the list, there are many other local hams that could be prodded for the info.

Our local ham radio club has been especially interested in helping local disabled hams (or hams to be) get on the air. But anyone local who needed help would find a group at their door ready to work.

The W5YI Group, Inc.
P.O. Box 565101
Dallas, Texas 75356
Tel. +1 817 461-6443

This firm consists of two separate divisions:

EDUCATION DIVISION:

Develops and distributes amateur radio self-training materials, including the Gordon West/WB6NOA line of audio, video, computer software and printed study materials. Credit card orders and information from (toll free): +1 800 669-W5YI (9594). All materials are guaranteed current and shipped within 24 hours with 2-day priority delivery. They offer a special discount for instructors conducting training classes.

W5YI Amateur Radio written license exam and Morse code training products are also available from every Radio Shack nationwide. Color photograghs of the major training products are available at their Express Order or Radio Shack Unlimited desk.

THE W5YI-VEC:

Coordinates the activities of more than one thousand volunteer examining teams world-wide. The locations of test sites near you can be determined by calling +1 817 461-4663 anytime, including evenings and weekends. Any General, Advanced or Extra Class amateur may form their own VE team by calling +1 817 860-3800 during normal business hours.

All examination results are electronically filed with the FCC.
Amateur radio licenses and call signs are normally issued within 48
hours of VEC receipt of the examination paperwork. New amateurs may
determine their call signs by calling the FCC's toll free consumer
assistance line: +1 800 322-1117.

(H) +1 713 592-8636 (6pm to 9:30pm Central Time)
(W) +1 713 770-1836 (6:30am to 3:30pm Central Time)

I have a collection of service information and literature dating back to the 1920's. I will be happy to assist those needing copies of out-of-copyright information for specific makes and models of receivers, transmitters, test equipment, etc..

The collection spans commercial, amateur, and military surplus gear of all types. Unfortunately I have not taken the time to catalog all this information, but it is logically filed by make, model, etc.

If you need service information for a specific piece of equipment, (and I have the information in my collection) I will research and copy it for you. Cost will vary depending on the time required to find the information and the amount of pages to be copied. I estimate 10 pages or less at $1.00/page including US postage. I will quote on larger manuals.

This is NOT my career or a business. Any requests must be prepaid or I will ship COD at additional postage costs.

Bob Salnick, Spokane,WA | UUCP: oliveb!isc-br!tau-ceti!DejaVu!salnick
Amiga 1000, WB 1.3 | INTERNET: salnick@DejaVu.spk.wa.us
WA9BVE |

I can help people with HF stuff, cheap antennas, and am willing to help
troubleshoot problems with rigs.

I believe that one of the pillars of ham radio - construction/
understanding at the burn-your-hand-with-a-soldering-iron level - is
drifting out of ham radio. With Japanese radios which cost so much,
fewer and fewer hams are willing to risk their warranty to service their
own equipment. I would like to see a turn-around here...

I'm certainly willing to be an Elmer if there's a need. I hope I've
learned a few things since 1966 when I first went on the air. :-)
Here's a list of subjects I might be able to help with:

Combining amateur radio and flying
Antennas
Civil Air Patrol
General Operating Practices
Older (Tube) Equipment
Test Equipment and Measurements

++

Dave Stine WA2JTA/6

dstine@cisco.com

My areas of expertise are:

- vacuum tube amps, receivers, exciters
- CW operating tips
- wire antenna tips, hints & kinks

++

David Stockton, GM4ZNX

dstock@hpsqf.sqf.hp.com

SWL since 1960
Licensed since 1984 (UK full class A)
Degrees in electronics&comms and digital techniques etc.
Currently senior design engineer doing RF design

Fairly broad interest in amateur radio (but not contests!)

Antennas, Transmission lines,filters from fundamental theory to practice
Receiver structures and circuits from simple to state of the art.
Transmitters, ATUs
Test equipment
Wide experience of troubleshooting/repairing equipment.
Professional experience of EMC/RFI
QRP
UK Operation and Licensing

My morse is flaky, but I keep working on it
No interest in contests
No interest in packet radio or in fixing computers

Just wrote the new oscillator and synthesiser chapter for the 1995
ARRL Handbook. Also co-developed (with G3ROO) a robust phase-locked

summing loop circuit to replace the common mixer-filter LO frequency adder. A technical article describing the project was recently published in RADCOM.

Admitted to practice law in California, Massachusetts, and New York.
ARRL Volunteer Counsel

I would (have been doing it by default) be happy to be an Elmer in the area of older HF gear, especially QRP operation with Ten Tec Argonauts (and Power Mites, etc.). Also have experience with other 10-20 year-old economy HF rigs, particularly the Kenwood TS-520.

Paul Williamson KB5MU

kb5mu@amsat.org

I'm not the author of InstantTrack itself, but I was extensively
involved in its testing. I'm the author of OrbitDRV (the tracking TSR
that comes with InstantTrack) and a number of other InstantTrack
auxiliary programs.

AMSAT-NA (the Radio Amateur Satellite Corporation in North America)
operates the Internet host AMSAT.ORG to provide for efficient
communications between people interested in the amateur satellite
program. At this time two services are provided: a message remailing
service and a mailing list service.

In addition, the AMSAT World-Wide Web home page provides interactive
access to a variety of information related to the amateur radio
satellite program. Use your Web browser program (e.g., Mosaic) to
access the URL:

http://www.amsat.org/amsat/AmsatHome.html

Anonymous FTP is available from:

ftp://ftp.amsat.org/amsat/

This archive contains much of the same information as the WWW server. In addition, various files and programs are available for anonymous FTP. This is a relatively new archive, so the older FTP site:

ftp://ftp.ucsd.edu/hamradio/

still has lots of files not available there.

The message remailing service permits users to send each other mail on the Internet without keeping track of each other's Internet address. The remailing service allows each user to receive mail sent to the address callsign@amsat.org, where callsign is that user's amateur radio callsign, or other unique identifier. Mail sent to that address will be routed first to the AMSAT.ORG host at UCSD in San Diego, then remailed from AMSAT.ORG to the network address specified by the user. In most cases, this process delays the message by only a very few minutes.

The mailing list service groups subscribers into mailing lists to receive certain types of messages. There are public mailing lists available to anyone, and private mailing lists available only to certain people (for example, AMSAT Board of Directors members or PACSAT command stations). Currently the following public mailing lists exist:

ANS AMSAT News Service

This mailing list carries official news releases from the AMSAT News Service. These messages are posted in a form suitable for direct posting to a packet radio BBS system. Each message contains a Bulletin Identifier (BID), which permits the message to be introduced into the packet network at many places without resulting in duplicate bulletins at any BBS. The primary purpose of this mailing list is to distribute ANS bulletins for redistribution (via the packet net or on AMSAT voice nets), but individuals may also subscribe for their own use. If your local packet BBS doesn't seem to get the ANS bulletins reliably, you are encouraged to post the ANS bulletins yourself.

Only authorized AMSAT News Service personnel should send messages to the ANS mailing list.

AMSAT-BB AMSAT bulletin board

This mailing list carries general AMSAT information. This information may NOT be suitable in content for transmission via amateur radio, so automatic reposting of AMSAT-BB messages to packet radio BBS's is discouraged. The purpose of this mailing list is to provide a forum for general discussion of any satellite-related topic.

Anyone may send messages to the AMSAT-BB mailing list.
Simply address your message to amsat-bb@amsat.org, and
it will be automatically forwarded to all subscribers
to the AMSAT-BB mailing list.

Editors of publications should ask permission of the
sender before publishing anything seen in AMSAT-BB
elsewhere, unless the posting was obviously a public
press release. However, posters should realize that
anything posted to AMSAT-BB is essentially public.

KEPS Keplerian Elements mailing list

This mailing list carries official postings of Keplerian
element sets for satellites of interest to radio amateurs.
Like the ANS bulletins, these messages are posted in a
form suitable for direct posting to a packet radio BBS.

Only authorized AMSAT News Service personnel should
send messages to the KEPS mailing list.

NASAINFO NASA related information mailing list

This mailing list contains information about current
and planned NASA space missions. Be forewarned: at times
this mailing list delivers many large messages.

SAREX Shuttle Amateur Radio Experiment mailing list

This mailing list contains information and press releases
pertaining to SAREX missions.

To obtain any of these services, just send a message to the address

listserv@amsat.org

This address may be reached from CompuServe MAIL as:

>INTERNET:listserv@amsat.org

For the moment, the maintenance of the AMSAT.ORG mailing lists and
remailing aliases is done manually. Later, this service will
probably be automated and you will have to follow a strict message
format. For now, you may send requests in free format. They will
usually be processed within a few days. In general, you will not
receive an explicit reply to your request. Be sure you specify:

1. Which mailing list(s) you want to receive

2. Your callsign, if any

3. The Internet address to be used, if different from the
one in your From: header.

You should not send messages about your subscriptions to any of the
mailing lists. Send them to listserv@amsat.org instead. This
includes questions, requests for changes, requests for information

about mailing services, and complaints.

The list of amateurs who may be reached via the message remailing service may be obtained by requesting the "address book". Note that the address book as distributed contains only the callsigns of the available addressees, not their actual Internet addresses. The address book is updated occasionally, and does not necessarily contain the very latest information.

You may request to be added to the list, to be deleted from the list, or to have your Internet address changed on the list. Please include your callsign if you have one. If you don't have a callsign, that's OK, but please say so. If you have more than one Internet address you want to have available on the AMSAT.ORG remailer, you may so specify. For instance, if you have a regular Internet address and a CompuServe account, you may appear in the address book as both w1xyz and w1xyz-cis. Mail sent to w1xyz would go to your Internet address, and mail sent to w1xyz-cis would go to CompuServe. MCImail accounts have the form w1xyz-mci, and so on.

You may also subscribe or unsubscribe to any of the public mailing lists described above. Send a message to listserv@amsat.org, specifying clearly which mailing list(s) you want to add or drop, and giving your callsign if you have one. When you subscribe to a mailing list, you will automatically be added to the remailing service as well, because the mailing lists are maintained by callsign. If you have more than one address listed in the remailing service, please indicate which one(s) you want the mailing list messages sent to.

Additional mailing lists, public or private, can be set up as needed. Send mail to listserv@amsat.org for details.

Questions about any service offered by AMSAT.ORG may be directed to listserv@amsat.org as well.

Please note that the AMSAT business office is separate from mailing list maintenance. You may address membership requests to martha@amsat.org, or send them by mail, phone, or fax to AMSAT headquarters:

Conway Yee N2JWQ
yee@mipg.upenn.edu
2144 East 21 Street
Brooklyn, New York 11229

Maintainer of the Universal and Free Listing of Repeaters for Radio Amateurs

This listing with all the data is available for anonymous FTP from:

ftp://mipg.upenn.edu/pub/yee/rptr010.Z

An experimental search and submission front-end is available at:

http://www.acs.ncsu.edu/HamRadio/scripts/repeaterdb.perl

As far as I am aware, all the data is freely redistributable and my
intent is to make sure it stays that way. For this reason, I have
applied the GNU General Public License.

The repeater project will now include repeaters from ALL bands and
is not limited to the US. This reflects the intent to make this
directory universal.

Contributions of data may be made by anonymous ftp to:

ftp://mipg.upenn.edu/pub/yee/uploads/

or via email to yee@mipg.upenn.edu

The data format has not been changed from the old format so
contributions that you were planning to make (prior to my recent
troubles) are still current and most welcome. This repeater listing
will be of use if people take an active part in making it accurate and
useful.

+ GRAPES 56 kBaud Packet Radio Modems
+
+ I'm not an official representative of the Georgia Radio Amateur Packet
+ Enthusiasts Society (GRAPES), but I am in contact with them, and have
+ experience using their 56 kBaud radio modems. At the very least, I can
+ forward requests I can't handle to the proper people.
+
+ The Proceedings of the 6th Computer Networking Conference has a paper by
+ WA4DSY explaining the theory and practice of the 56 kBaud radio modem.
+ (I think it's the 6th, I don't have my copy handy.)
+
+ GRAPES furnishes instructions for modifying a TNC2 to drive the modem,
+ but there are better solutions. The Ottawa PI card and the Gracillis
+ PacketTwin card are two good solutions. Of course they are PC bus
+ cards. If you need standalone capability, the Kantronics Data Engine
+ can handle it, as can the incredible Gracilis PacketTen.
+
+ If you want information on the RF modem (full document sets are $20,
+ creditable towards a later order) write to GRAPES at
+
+ GRAPES, Inc
+ PO Box 636
+ Griffin, GA 30224-0636
+
+ GRAPES is a volunteer networking organization. There's no phone number,
+ and turnaround on info requests may be slower than when dealing with
+ commercial outfits. Please cut the volunteers a little slack.

+ of AMSAT-BB messages to packet radio BBS's is discouraged.
+ The purpose of this mailing list is to provide a forum
+ for general discussion of any satellite-related topic.
+
+ Anyone may send messages to the AMSAT-BB mailing list.
+ Simply address your message to amsat-bb@amsat.org, and
+ it will be automatically forwarded to all subscribers
+ to the AMSAT-BB mailing list.
+
+ Editors of publications should ask permission of the
+ sender before publishing anything seen in AMSAT-BB

+ elsewhere, unless the posting was obviously a public
+ press release. However, posters should realize that
+ anything posted to AMSAT-BB is essentially public.
+
+ KEPS Keplerian Elements mailing list
+
+ This mailing list carries official postings of Keplerian
+ element sets for satellites of interest to radio amateurs.
+ Like the ANS bulletins, these messages are posted in a
+ form suitable for direct posting to a packet radio BBS.
+
+ Only authorized AMSAT News Service personnel should
+ send messages to the KEPS mailing list.
+
+ NASAINFO NASA related information mailing list
+
+ This mailing list contains information about current
+ and planned NASA space missions. Be forewarned: at times
+ this mailing list delivers many large messages.
+
+ SAREX Shuttle Amateur Radio Experiment mailing list
+
+ This mailing list contains information and press releases
+ pertaining to SAREX missions.
+
+
+ To obtain any of these services, just send a message to the address
+
+ listserv@amsat.org
+
+ This address may be reached from CompuServe MAIL as:
+
+ >INTERNET:listserv@amsat.org
+
+ For the moment, the maintenance of the AMSAT.ORG mailing lists and
+ remailing aliases is done manually. Later, this service will
+ probably be automated and you will have to follow a strict message
+ format. For now, you may send requests in free format. They will
+ usually be processed within a few days. In general, you will not
+ receive an explicit reply to your request. Be sure you specify:
+
+ 1. Which mailing list(s) you want to receive
+
+ 2. Your callsign, if any
+
+ 3. The Internet address to be used, if different from the
+ one in your From: header.
+
+ You should not send messages about your subscriptions to any of the
+ mailing lists. Send them to listserv@amsat.org instead. This

+ includes questions, requests for changes, requests for information
+ about mailing services, and complaints.
+
+ The list of amateurs who may be reached via the message remailing
+ service may be obtained by requesting the "address book". Note that
+ the address book as distributed contains only the callsigns of the
+ available addressees, not their actual Internet addresses. The address
+ book is updated occasionally, and does not necessarily contain the very
+ latest information.
+
+ You may request to be added to the list, to be deleted from the list,
+ or to have your Internet address changed on the list. Please include
+ your callsign if you have one. If you don't have a callsign, that's
+ OK, but please say so. If you have more than one Internet address
+ you want to have available on the AMSAT.ORG remailer, you may so
+ specify. For instance, if you have a regular Internet address and a
+ CompuServe account, you may appear in the address book as both w1xyz
+ and w1xyz-cis. Mail sent to w1xyz would go to your Internet address,
+ and mail sent to w1xyz-cis would go to CompuServe. MCImail accounts
+ have the form w1xyz-mci, and so on.
+
+ You may also subscribe or unsubscribe to any of the public mailing
+ lists described above. Send a message to listserv@amsat.org,
+ specifying clearly which mailing list(s) you want to add or drop, and
+ giving your callsign if you have one. When you subscribe to a
+ mailing list, you will automatically be added to the remailing
+ service as well, because the mailing lists are maintained by
+ callsign. If you have more than one address listed in the remailing
+ service, please indicate which one(s) you want the mailing list
+ messages sent to.
+
+ Additional mailing lists, public or private, can be set up as needed.
+ Send mail to listserv@amsat.org for details.
+
+ Questions about any service offered by AMSAT.ORG may be directed to
+ listserv@amsat.org as well.
+
+ Please note that the AMSAT business office is separate from mailing
+ list maintenance. You may address membership requests to
+ martha@amsat.org, or send them by mail, phone, or fax to AMSAT
+ headquarters:
+
+ AMSAT-NA
+ 850 Sligo Avenue
+ Silver Spring, MD 20910
+ USA
+
+ Voice: +1 301 589-6062
+ FAX: +1 301 608-3410

48. Amateur Radio: Elmers List Info and Administrivia

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-01 00:00:00 UTC
From: pschleck@gonix.com
Message-ID: <radio/ham-radio/elmers/admin-1-796737611@gonix.com>
Source record: 249507
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,rec.answers,news.answers

```
Posted-By: auto-faq 3.2.1.2
Archive-name: radio/ham-radio/elmers/admin
Revision: 1.12 03/16/95 12:06:16
Changes: Archive names a-m/n-z are now part1/part2
Posting-Frequency: posted on the 1st of each month

This administrivia file and the companion Amateur Radio Elmers Resource
Directory are intended for non-commercial distribution via Usenet. Any
other uses, please E-mail for permission.

[Special note: My E-mail addresses have changed, reflecting a move to
Greater Omaha Public Access Unix, which was motivated by a desire to
seek a stable site for the Elmers List for some time to come. See my
signature below for the new addresses. My old E-mail addresses, at the
University of Nebraska at Omaha, will probably work for the foreseeable
future, but are not guaranteed.]

In order to standardize the Internet resource notation used in this
Directory, I've decided to adopt Uniform Resource Locator (URL) format
throughout. In addition to being a straightforward, human-readable,
format for specifying File Transfer Protocol (FTP) archives, Gopher
and World-Wide Web (WWW) servers, and Usenet newsgroups, it is also
amenable to formatting as hypertext links in Hypertext Markup Language
(HTML). For example, users viewing this document at the Ohio State
World-Wide Web Server (see "How may I obtain the latest copy of the
Elmers List?" below) will see all URL's converted to hypertext links
on their WWW client. Rather than fumbling with the various
conventions of FTP, Gopher, WWW, and Usenet News software, the
document or directory referenced by a hypertext link is but one mouse-
click (or key-click) away.

Scott Ehrlich has graciously agreed to be a WWW Elmer and provide
further information about how to obtain and use WWW client software
such as Lynx and Mosaic (see his entry). While I'm happy to
incorporate the latest and most popular information-formatting
standards into the documents that I maintain, I really can't allow
myself to be dragged into the role of a WWW help-desk for all of the
Internet. Please understand this when I politely refer you to other
Elmers, easily-obtainable on-line documentation, or even local
expertise such as resident gurus, consultants, or help-desks at your
school, company, or information service provider.

I expect there to be a bit of controversy regarding my adoption of
this somewhat radical new standard, especially to many users who can't
or won't use WWW. Those users should be assured that I wouldn't have
```

adopted a standard unless it was easily human-readable by those accessing this document as straight ASCII (which is one of the main reasons why the entire Elmers list isn't HTML, MIME, MMDF, or one of many other competing, mostly non-compatible, information formats). The URL format is easily mapped into human FTP, Telnet, Gopher, and Usenet News reader commands. For example:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/README

Anonymous FTP to ftp.cs.buffalo.edu and get the file README under the /pub/ham-radio directory.

gopher://oes1.oes.ca.gov:5555/

Access the Gopher root page at oes1.oes.ca.gov via non-standard port 5555 (if the standard Gopher port of 70 was used, the ":5555" part would be replaced by ":70" or most likely not appear at all).

telnet://callsign.cs.buffalo.edu:2000/

Initiate a Telnet (remote terminal) session with callsign.cs.buffalo.edu via non-standard port 2000 (if the standard Telnet port of 23 was used, the ":2000" part would be replaced by ":23" or most likely not appear at all).

news:rec.radio.info

Access the rec.radio.info newsgroup on your Usenet newsreader from your local news server.

URL's that start with:

http:

Are only accessible via WWW client software (which is why almost all http: URL's in this directory also have corresponding ftp: or gopher: URL's).

For more information about URL formats, see:

http://www.cc.ukans.edu/lynx_help/URL_guide.html
ftp://nis.nsf.net/documents/rfc/rfc1630.txt
http://info.cern.ch/hypertext/WWW/Addressing/URL/URI_Overview.html

Disclaimer: While I have personally confirmed the accuracy of all URL's through the Lynx WWW client, any referenced documents external to this document are subject to future changes beyond my control. In addition, with networks and their administration being what it is, many services with up-to-date URL's may be temporarily unreachable. Please consult with your local gurus, consulting staff, or help-desk to confirm that it's a non-local problem, then ask the Elmer him or herself (me in the case of URL's which appear outside of individual entries). The currency and accuracy of URL's should be at least no worse than that of the Elmers entries themselves (which are each individually confirmed by me every 2 years, and updated within 1 month

on request of the Elmer).

A Brief Historical Overview:
++++++++++++++++++++++++++

If there is any one constant in the changing state of the communications art, it is that "Hams" (Amateur Radio Operators) have always been on the forefront of it. Rumors abound where the term "Ham" came from. Some of the more amusing are described in the list of Frequently Asked Questions for this newsgroup.

Regardless of origin of the name, a "Ham" is universally recognizable as one who experiments in radio and communications.

Whether it be constructing a low-power CW radio with vacuum tubes, or designing TCP/IP packet networks, such experimentation has historically spilled over into the mainstream such as was the case with Howard Armstrong, who developed the regenerative oscillator and FM radio, or General Curtis LeMay (W6EZV) who was instrumental in making Single-Sideband the communications standard for the Strategic Air Command (1947-1992, now reorganized into a joint command called USSTRATCOM) and eventually the U.S. Air Force. Although packet-switching techniques originated from DARPA (Defense Advanced Research Projects Agency) and the ARPANet, no one can deny the tremendous influence that amateurs have had in demonstrating the viability of TCP/IP and AX.25 communications via radio links. The efforts of AMSAT (the Amateur Satellite Corporation), including the development of many ham satellites and the low-orbiting Microsats (communications satellites no bigger than a breadbox that use store-and forward packet techniques), have certainly advanced the state-of-the-art in communications, one of the defined purposes of the Amateur Radio Service, as recognized by international treaty.

Since in many cases hams are writing "the book", there is often no "book" or other established reference for a beginner to refer to. Traditionally, information has been passed on from ham to ham via word-of-mouth. Like many of the traditional crafts, a variation of the Master-Apprentice system has emerged, the Elmer-Novice relationship. Called "Elmers" because they are usually older and wiser, having the benefit of many years in the hobby, including several failed projects, and an electric shock or two, they have traditionally been the mainstay of amateur radio, and the source of many new hams, particularly those interested in working on emerging technologies.

Even more importantly, Elmers provided an outlet for the impatient newcomer who wanted "to know everything, and right away." Faced with such a request, a good Elmer will smile and proceed to lead the novice through some project or operating experience. Several hours, days, or weeks later, the novice would have his answers, but would have earned them. Even better, the sense of accomplishment would boost the novice's confidence and nudge him or her down the road to being a model, experienced ham operator.

Many present hams feel that such an experience is missing today. In today's hustle-bustle world, the response to such natural curiosity and desire to learn is, more often than not, "I'm too busy" or "RTFM." As a result, the quality of new hams declines and the knowledge and operating habits they develop in their first formative months and years leave much to be desired. And the very same hams who claim that they "can't understand the new generation" also, in almost the same breath, lament about the "decline of amateur radio."

What is an Elmer today?
++++++++++++++++++++++++

An Elmer today is of any age, male or female, who has some expertise and is willing to share it with beginners. Elmers don't even need to be licensed amateurs, just people with knowledge in some area of electronics or communications technology.

What is a Usenet Elmer?
++++++++++++++++++++++++

With the ever-widening scope of the Internet, and the amateur radio newsgroups on Usenet, the potential for Elmers to share their knowledge to a wide audience has never been greater. To that end, I maintain a list of such Elmers. Volunteers need only send me their name, E-mail address, and area of expertise. I have set up an administrivia mailbox for this purpose (elmers-request@gonix.com, the default Reply-To: of this message).

Those desiring a more extensive list, or who need more specific assistance, are encouraged to contact Rosalie White, WA1STO, Educational Services Manager at the American Radio Relay League, 225 Main St., Newington, CT 06111 or via electronic mail addressed to rwhite@arrl.org.

How may I obtain the latest copy of the Elmers List?
++

There are currently 7 ways of obtaining the Elmers List. Any site at least reachable by Internet E-mail can use options 3 or 4:

1. Usenet News: The latest copy of the list can be found in the companion postings to this message, "Amateur Radio: Elmers Resource Directory [A-*]" and "Amateur Radio Elmers Resource Directory [*-Z]" (The * represents a wildcard character, as the need to split the list evenly to keep both parts under the 64K message limit for Usenet requires that I adjust the split occasionally). Since the list is cross-posted to the following newsgroups:

news:rec.radio.amateur.misc
news:rec.radio.info
news:rec.answers
news:news.answers

on the 1st of each month, with an expiration date 6 weeks into the future, there should always be a copy available at most news sites. Check your newsreader documentation for information about reading previously-read articles or articles that are "threaded" to this one. Also complain to your local news administrator (E-mail to "news" or "usenet" on your local host) if your local news server is configured to ignore Expires headers (and thus prematurely delete the articles) in worthwhile, mostly moderated, information newsgroups like those listed above.

2. Anonymous FTP: If your site is directly connected to the Internet, you may retrieve the latest copy via File Transfer Protocol (FTP) from the following sites:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/
ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/elmers/

3. Mailing-List: Since the list is cross-posted to rec.radio.info, the latest copy may be obtained from the mailing-list gateway for that newsgroup (along with many other informational articles about radio) when it is published each month. To subscribe, send E-mail to:

listserv@ucsd.edu

and in the BODY (not the Subject) of the message, write:

subscribe radio-info

The server may not be able to determine your return address. In that case write:

subscribe radio-info (your E-mail address)

You should get an acknowledgement very shortly.

4. Mail-Server: If you don't want to read through the entire gateway of rec.radio.info, or want a copy of the list right away, send E-mail to:

mail-server@rtfm.mit.edu

and in the BODY (not the Subject) of the message, write:

send usenet/news.answers/radio/ham-radio/elmers/admin
send usenet/news.answers/radio/ham-radio/elmers/index
send usenet/news.answers/radio/ham-radio/elmers/list/part1
send usenet/news.answers/radio/ham-radio/elmers/list/part2
send usenet/news.answers/radio/ham-radio/elmers/diff

and the latest copy of the list should be sent to you E-mail within 24 hours (the mail-server uses batch priority to reduce system demand).

The last three services are experimental. I'm not terribly familiar with them, and cannot offer much technical support regarding their use. (I'd appreciate feedback on whether or not you find them useful, though.)

5. Internet Gopher: The latest copy of the list should be available
from the following Gopher sites:

gopher://cc1.kuleuven.ac.be/
gopher://jupiter.sun.csd.unb.ca/
gopher://gopher.univ-lyon1.fr/
gopher://ftp.win.tue.nl/
gopher://gopher.win.tue.nl/

see also news:comp.infosystems.gopher

6. World-Wide Web (WWW): The latest copy of the list should be available
from the following WWW site:

http://www.cis.ohio-state.edu/hypertext/faq/usenet/radio/ham-radio/elmers/top.html

The advantage of reading the Elmers list at this site via WWW client
software is that all URL's are converted to hypertext links.

see also:

news:comp.infosystems.announce
news:comp.infosystems.www.misc
news:comp.infosystems.www.providers
news:comp.infosystems.www.users

7. Wide-Area Information Service (WAIS): The latest copy of the list
should be available from the WAIS server at:

wais://rtfm.mit.edu/usenet

see also news:comp.infosystems.wais

How may I contribute to the Elmers List?
++

By using this resource, you are benefitting the net by obtaining
assistance in the fastest and most efficient way possible. By
volunteering to appear on this list, you are contributing to the good
reputation of the radio-related newsgroups.

Thanks to all the volunteer Elmers, as well as courteous list users, for
making this service a success.

Amateur Radio Elmers Resource Directory (as of 04/01/95)
++++++++++++++++++++++++++++++++++++++++++++++++++++++
- A -
++++++++++++++++++++++++++++++++++++++++++++++++++++++

John Ackermann AG9V

jra@lawdept.daytonOH.ncr.com -or- jra@ag9v.ampr.org

My primary interests are in packet radio network building (particularly
higher speed stuff) and TCP/IP. I've got quite a lot of info on using
the Kantronics D4-10 19.2kB radios, as that's the hardware we've been
struggling with here.

TAPR (Tuscon Amateur Packet Radio) has formed a special interest group
to discuss issues of regional packet networking (Net-SIG). As a result,
the TAPR net-sig mailing list was born, and is now ready for operation.

This list is <not> intended to replace any of the existing packet-related
mailing lists. Its purpose is provide a medium for communications among
those interested in packet radio networking, both dealing with technical
issues and political/regulatory ones. We'll discuss things like how the
potential 219MHz band will fit into the networking picture, how to link
areas using different networking schemes, how to set network parameters,
etc. The list's charter will be posted there regularly.

The address of the list is net-sig@tapr.org and you can subscribe by sending
mail to listserv@tapr.org with the text "join netsig".

Apart from subscribing to the list, you can contact me for further details
about the Net-SIG (including upcoming conferences).

Joint ampr.org IP Coordinator for Ohio subnet (44.070.xxx.xxx)

Please direct all correspondence regarding the assignment of ampr.org IP
numbers in Ohio to:

ipaddr@ag9v.ampr.org
```

which is a mailing list read by a team of coordinators.

[Editor's note: All ampr.org coordinators are listed in the document
at:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/ampr_coordinators

ARRL HQ I Internet bbattles@arrl.org I Get married!"
Newington, CT USA I Amprnet ws1o@ws1o.ampr.org I
"""

VHF packet (AX.25 and TCP/IP)
HF SSB and RTTY
FM/repeaters
Clubs/activities
Public relations
Writing (for newsletters and ARRL publications)

My job at as QST Features Editor at ARRL HQ includes (among other
things) writing and editing general-interest feature articles for QST,
and writing the FM column, Up Front in QST and Strays.

I'm the "handling editor" (copy editor+) for other regular columns
conducted by other contributors, including Packet Perspective by Stan
Horzepa, WA1LOU; Public Service by Rick Palm, K1CE; Club Spectrum and
Section News by Steve Ewald, WV1X; How's DX? by Bill Kennamer, K5FUV;
Happenings by Jim Cain, K1TN; Contest Corral and Special Events by
Warren Stankiewicz, NF1J; Hamfest Calendar and Coming Conventions by
Gail Iannone; most of the contest rules announcements and results
articles; and I compile the Annual Index in the December issue.

I coordinate and often contribute to the New Books reviews and New Products listings scattered throughout the magazine, and often contribute to QST Product Reviews. I also wrote the "Modes" chapter in the 1995 ARRL Handbook and chapters in the ARRL Operating Manual, and I've contributed to several other publications, including W1FB's Help for New Hams (ARRL) and Ham Radio Horizons (CQ Communications).

I started working at ARRL HQ as QST Copy Editor in December 1989.

I'm 37 years old, I've been a ham since 1976 and I hold an Amateur Extra Class license. I'm a member of the ARRL, the ARRL A-1 Operator Club, Ten-Ten International Net (53313), and the Middlesex Amateur Radio Society/Connecticut Amateur Radio Emergency Service (MARS/CARES, an ARRL Special Service Club, in which I served two terms as president and a couple of years as newsletter editor). I'm also an ARRL Public Information Officer for the Connecticut Section. These days, most of my on-air time is limited to 2-meter and 440-MHz FM and 2-meter TCP/IP packet radio, although I crank up the HF rig when I can spare some time and try to join in VHF/UHF contests when I have the time and access to equipment. My favorite Amateur Radio activity is Field Day; the MARS/CARES club has a terrific time with that event every year.

I have about 10 years' experience with personal computers, including MS-DOS, Windows and IBM OS/2. I was a full-time professional commercial broadcaster for 12 years.

My latest volunteer public service project is that I'm the official Amateur Radio Liaison the the 1995 Special Olympics World Games, to be held in Connecticut. I report to Dr Chuck Bruder, N3AGA, the Special Olympics' Deputy Commissioner of Telecommunications. (This is supposed to be literally the biggest event in the US in 1995, and possibly the world! They expect 10,000-15,000 athletes, 45,000 international delegates from almost all nations, more than 500,000 spectators, about 20 hours of prime-time network TV coverage, and probably a visit from President Clinton and the First Lady...whew!)

Electronic Circuits
Antennas and Transmission Lines

My electronics expertise is mostly analog, but I have some insights into
DSP applications that can do better in what used to be the analog
dominions. I can be of the most help with low-frequency analog stuff,
particularly measurements and low-level/low-noise/low-distortion
applications. I breadboard with IC's, discretes, and surface mounts
(which I prefer to use now, as surface mounting requires less drilling
of PCB boards once they are etched). My electrical engineering
education (Ph.D.) emphasized control systems. I also have a clear
understanding of transmission line measurements and behavior (a
personal research interest for the last 25 years or so).

++

Barry Buelow WA0RJT Packet BBS in Cedar Rapids, IA
barry@ia.net WA0RJT@WA0RJT.IA.USA.NOAM

The Tuscon Amateur Packet Radio (TAPR) Bulletin Board Special Interest
Group (BBSSIG) is sponsoring a working group to generate and distribute
a series of information bulletins which will serve to instruct packet
radio users in a variety of areas. These bulletins will be distributed
via the packet network and can be retained at each BBS in a file area.
An index will be provided to allow users to find information they
desire.

If you are interested in actively participating in this effort and can work
on a collaborative effort, please speak up. Send a message to my E-mail
address above.

[Editor's Note: As this project is still very much a work in progress,
and its eventual products will certainly be made available via several
information sources (including the Internet) as soon as they are

completed, I'm sure Barry would appreciate it if only serious volunteer contributors contacted him at this time.]

GRAPES 56 kBaud Packet Radio Modems

I'm not an official representative of the Georgia Radio Amateur Packet
Enthusiasts Society (GRAPES), but I am in contact with them, and have
experience using their 56 kBaud radio modems. At the very least, I can
forward requests I can't handle to the proper people.

The Proceedings of the 6th Computer Networking Conference has a paper by
WA4DSY explaining the theory and practice of the 56 kBaud radio modem.
(I think it's the 6th, I don't have my copy handy.)

GRAPES furnishes instructions for modifying a TNC2 to drive the modem,
but there are better solutions. The Ottawa PI card and the Gracillis
PacketTwin card are two good solutions. Of course they are PC bus
cards. If you need standalone capability, the Kantronics Data Engine
can handle it, as can the incredible Gracilis PacketTen.

If you want information on the RF modem (full document sets are $20,
creditable towards a later order) write to GRAPES at

GRAPES, Inc
PO Box 636
Griffin, GA 30224-0636

GRAPES is a volunteer networking organization. There's no phone number,
and turnaround on info requests may be slower than when dealing with
commercial outfits. Please cut the volunteers a little slack.

++

Derrick C. Cole KC4WEJ

dcc@ssds.com

I'm a Network/Systems Analyst with a national systems integration firm.
My professional fortes are UNIX-based system administration, sendmail,
TCP/IP-based ethernet network engineering, network systems security
(including firewalls), and programming (primarily Perl and C).

I've had notable success dealing with issues surrounding PC's, DOS,
Windows and various applications/protocol stacks, including PC-NFS and
LAN Workplace.

I'm still clueless in the electrical/circuit department.

William (Bill) Coyle N3OGH

wcoyle@delphi.com

AX.25: N3OGH@AA3CH.EPA.USA.NA

My primary experience is with HF communications, particularly with the
Kenwood TS-830S and TS-940/AT. My preferred mode is CW, although I
also use SSB. I have had experience with light service on both rigs
(including the internal antenna tuner on the 940 and the tube finals
on the 830). I have the service manual for the 940.

I am particularly interested in helping new hams design and set up HF
stations with multi-band wire antenna arrays.

Other than HF, I am also involved in VHF and UHF, particularly 2
meters, and have recently gotten involved in packet radio (having
gained some experience on the hardware end of setting up such a
station).

Scott Ehrlich Amateur Radio Callsign: wy1z E-mail: wy1z@neu.edu
Boston ARC ftp archives: ftp oak.oakland.edu /pub/hamradio
Boston ARC Web page: http://www.acs.oakland.edu/barc.html
ARRL Web page: http://www.acs.oakland.edu/barc/arrl.html

I've played around with Mac and PC hardware, as well as dabbling a
little with DOS, UNIX, and MacOS.

I co-maintain the Boston Amateur Radio Club anonymous FTP file archives
with Phil Temples, K9HI (k9hi@netcom.com).

A sampling of the archives include:

A virtually complete archive of all ARRL bulletins since 1992 is
available at ftp://oak.oakland.edu:/pub/hamradio/barc/w1aw-list/

A mirror of all files available from the ARRL info server is also
available: ftp://oak.oakland.edu/pub/hamradio/arrl/infoserver/

The ARRL infoserver mirror has FCC Part 97 (U.S. Amateur Radio Service
Rules and Regulations) at:
ftp://oak.oakland.edu/pub/hamradio/arrl/infoserver/rib/part97.txt

Programs mentioned in QST are in:
ftp://oak.oakland.edu/pub/hamradio/arrl/qst-binaries/

Amateur Radio Newsline is now also being archived, too:
ftp://oak.oakland.edu/pub/hamradio/docs/newsline/

Ham Radio and More, the radio show carried live every Sunday (6pm - 7pm EST) on the Talk America Radio Network, now has a World Wide Web home page:

http://www.acs.oakland.edu/barc/ham-more/ham-more.html

The Boston Amateur Radio Club also has a World Wide Web Home Page:

http://www.acs.oakland.edu/barc.html

Due to the popularity of the KY1N VE listing and W1GSL's hamfest list, I have incorporated both of these listings into the Boston Amateur Radio Club's Web page:

http://www.acs.oakland.edu/barc/ne-happenings.html

With the cooperation of the Boston Amateur Radio Club, I have put together a World-Wide Web page for the American Radio Relay League (ARRL).

Since the ARRL does not yet have web capabilities of their own, this page is being offered on the same site as the Boston Amateur Radio Club's web page.

The address to access the page is:

http://www.acs.oakland.edu/barc/arrl.html

It has pointers to the ARRL Letter, E-mail addresses of HQ staff, official League bulletins, and much more!

You will need Lynx, WWW, or Mosaic to view them (or you may obtain a copy of the page via E-mail; send a message to listserv@info.cern.ch with the word "help" in the body for more information). Ask me for more details about this.

ARRL Laboratory Engineer

Radio Frequency Interference (RFI) matters
Equipment Testing

My survey of automotive EMI problems is mostly complete. The results are in September 1994 QST, including warranty and customer service information for most automobile manufacturers (many of whom have published installation guidelines).

I am also continuing to pursue more formal contacts and standards-making through the EMR and EMI Standards Committee of the Society of Automotive Engineers (SAE), of which I am a member.

Copies of General Motors installation guidelines are available. Saturn allegedly has a video on mobile installation, but none of the dealers seem to know about it. I have a call into one of my low friends in high places. :-)

If anyone would like a copy of the GM installation guidelines, send a 9X12" SASE with two units of postage *and* a specific request for the "GM Installation Guidelines" to the ARRL Technical Department Secretary, 225 Main St, Newington, CT 06111. A copy has been reprinted in the ARRL book -- Radio Frequency Interference -- How to Find It and Fix It.

EMI/RFI Resource List and RFI Tips package available. A business SASE with 98 cents postage is appreciated. Please specify the desired documents in your correspondence.

The FCC has released the results of a telephone interference survey just completed.

If you would like a copy of the survey, which includes a list of telephone models checked, send an SASE with two units of first class postage to the Technical Information Service at ARRL HQ. Alternatively, you may obtain an electronic copy from the info server below.

If leakage from your local Cable TV operator is interfering with the Amateur Radio Service, it is in violation of the provisions of Part 76 of the FCC regulations.

I would first direct the problem toward the cable company system engineer or service manager. Chances are the "front-line" people who answer the phone don't know what you are talking about.

If this is not effective, contact me here at ARRL HQ. I can put you in contact with our liaison to the National Cable Telecasters Association. This liaison will help your cable operator understand their responsibilities.

For CATV interference problems in general, I recommend you obtain our Radio Frequency Interference Book. If you are a League Member, you can also get a copy of the ARRL Technical Information Service info package on CATVI -- "EMI/RFI - CATV" by sending a LARGE SASE with 3 stamps on it to the ARRL Technical Department Secretary, 225 Main St, Newington CT 06111. This package is a reprint of an article I wrote for Communications Technology -- the Journal of the Society of Cable

Television Engineers. We submitted it to "their" journal because we
felt that it would carry more weight with the cable companies.

If you have any questions after you have read the material, contact me
here at HQ. I can usually get back to you within a few days to offer
some additional help.

Many amateur radio informational documents (including EMI/RFI files) are
also available from the ARRL info server. Send E-mail to info@arrl.org
with the word "HELP" in the message body.

ARRL info server files may also be accessed via anonymous FTP at:

ftp://oak.oakland.edu/pub/hamradio/arrl/

(Continued in next part.)

50. Re: Shops/Activity in Mass/NE area.

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-01 00:00:00 UTC
From: dts@peanut.senie.com
Message-ID: <3lijs7$q8g@nic.iii.net>
Source record: 249509

In article <796312439snz@g4kfk.demon.co.uk>,
Mike Gathergood <Mike@g4kfk.demon.co.uk> wrote:
)> I will be in and around Marlboro in Mass. next week and would like to visit a
)> HAM shop.
)> Can anyone give me any details and directions to shops in the area (I have
)> heard there is
)> a HRO in NH?). I`ll also have my HT with me so any info on local repeaters/freq
)> would also
)> be very handy.

Repeaters: 2 meters, try 146.61(-) in Marlboro. For 70cm, use 448.625(-) with
88.5 tone. Covers most of east mass, linked to a few others.

)
)Try Ham Radio Outlets at 224 North Broadway, Salem, NH on 603 898 3750.
)Follow the 495 North out of Marlborough for about 30m, then North on the
)93 and it's the first exit after the state line, about 5 miles East of the
)motorway.

Actually, it's a lot easier if you take exit 2 on I-93 in New Hampshire
(second exit after the border), right turn off the ramp, head east to
Route 28 (which is North Broadway) and turn left (north) on Rt. 28.
HRO will be in a strip mall on the right, across the street from the
Granite State Potato Chip Company.

)
)If you're in the East side of MA, try Lentini Communications in Newington CT.
)West along the Mass Pike as far as Springfield (watch out for Bart Simpson),
)then south on the 91. If you contact the ARRL they have a detailed map they
)send to visitors to ARRL HQ, also in Newington.

I think you meant WEST part of Massachusetts, not East. Lentini is in
Newington, which is near Hartford. It's a 1 hour, 30 minute drive from
Marlboro area, and you'd want to take I-84 from Sturbridge rather than
heading all the way out to Springfield. I-84 kind of goes on a diagonal.

From Marlboro, I'd suggest HRO. Also nearby in New Hampshire is Rivendell
Electronics, another ham store. They are off of exit 4, head east a few
blocks, and they're on a side street to the left. You should be able to
spot the antennas and find the place.

Gandalph, ARRL membership can be good or bad, depending on the
individual. The magazine is informative on many subjects, including
DX, Packet, RTTY, etc...
However, there are some political issues regarding the ARRL and
certain members of the amateur community.

My suggestion is to ignore the politics, get a sample copy of QST
from the ARRL and get a packet of them outlining what they offer members.
Ignore the politics -- it'll only sour you on a great hobby.

I'm interested in collecting some "best practices" in helping 5th/6th graders in getting their ham radio licenses. I'm especially interested in ways to help them stay motivated (i.e. ideas that make it fun for them, etc.). Also- any ideas for how to make the "dry" FCC requirements, etc. interesting for them?

Thanks!

-Steve Henry AA0VB
Fort Collins, Colorado.

Hi Heath, name here is Eran KD6KVO.
I installed my rig in my Mazda truck. Dont be intimidated, it's a breeze. Use decent size wiring (at least 14 gage, 12 is better) direct from the battery, and use a fuse on BOTH wires (in case you mix them up one day.) Definately dont run anything through the car fuses, or the cigarette lighter, take it direct off the battery. Use red for the hot (positive) and black for the negative.
Come through the firewall by threading through an existing grommet, and route it inside to where you want it to be - maybe underneath the passenger carpet and up by the console. Then terminate it in a standard molex connector - a 2-pin, size 093 (maybe .093?). Its the beefy one. Use the female pins for the power end, the male pins for the radio. (I would change all my radios to the same standard pins).
Good luck!

Scott,

DAK is indeed a goner. They had their bankruptcy sale a couple of months ago. Frankly, I only ever kept one or two of the things I bought from them. Most of it was junk, particularily after they were no longer a liquidation house and started having their own brand put of cheap electronics.I used to live right near the store in Canoga Park but stopped going when I realized that I was almost always back the next day returning whatever I had bought.

57. Ten-Tec worth the price?

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-01 00:00:00 UTC
From: danb@cv.hp.com
Message-ID: <D6CIFL.HA9@hpcvsnz.cv.hp.com>
Source record: 249516

I am considering a new HF rig and am curious about Ten-Tec gear. The sales literature touts finals that don't require SWR foldback circuits or cooling fans, superior receiver performance, rugged construction, etc.

The one person I know who owns a Ten-Tec (Omni VI) raves about how rugged and well built these radios are.

Prices seem high compared to Icom, Kenwood, and Yaesu, featurewise.

I'm interested in comments from people who have owned/used Ten-Tec radios.

What do you like/dislike about them?
Are they worth the price?
Are the advertising claims of quality and performance justified?
Recommendations: Models to seek/avoid?

Thanks in advance for any information.

Subject: Great DX conditions or "don't look now but you S-units are showing"

Did anyone else catch the fantastic band opening last night? I could not sleep so I was up late and was tuning around 20 meters when I heard the clock strike midnight. Suddenly the band really came to life with some great DX stuff. First I heard Romeo Germany 8 Uniform really banging in from somewhere in the south Atlantic with a big pile-up on the frequency. I picked a spot and dropped in my call. "Mike India Lima go ahead". "Germany 8 Uniform, you are 70 over 9, QSL info please." "Not to worry India Lima, my card 63% to you via burro." "Aw-Right, got him!" Then Papa Hotel 0 Nancy Echo gave me a call on CW running a modified HW-8 at a KW output with a re-worked cash register as a keyboard keyer. Maybe try a little more CW action. Called CQ on CW and answered by BIG CARRIER, weak audio from Victor 0 India Charlie Echo. "Your audio is week, OM, try turning up the gain." Found out the audio section of his transmitter was not working and he was modulating by screaming at the final tubes. Swung the beam further south and there was Charlie 0 Alpha X-Ray in the Feedline Islands. Gave him a call. "Kilo 5 Mike India Lima you are pinning my S meter, do not transmit again I am afraid you may blow my rig." "Roger roger Alpha X-Ray, what is QSL info please?" He didn't reply. OK, lets see what's going on in the Pacific. Swing the beam on around. Wow! there is Fox Ocean 0 Lima running 80 over 9! "Fox Ocean 0 Lima this is Kilo 5 Mike India Lima you are 80 over 9, what are you running?" "Ok Mike India Lima, rig here is a converted cordless phone running 1.63 watts using lamp cord feedline to a chicken wire fence." Now this is great, lets see what is going down on the European front. Swing the ole beam on around past north. Man listen to those signals! Better catch this one. Dropped in my call. "Mike India Lima go ahead." "Roger roger, Germany 0 Tango Charlie Hotel Alpha, you are 62.3 db over S9, Q5 copy. What is my report?" "Mike India Lima, you are minus S8, can only copy on negative voice peaks, try again." "MINUS S8!!, WHADDYAMEAN MINUSE S8? Im running 14 bazillion watts to a 42 1/2 element Thunder Stick at 163.42 feet!! Minus S8 my Aunt Fanny!" Wait a minute, what's that call again? G0TCHA? What's today? Let's see that calendar. Aw rats!

Hi Gan,
The ARRL membership includes a subscription to QST, the finest amateur
radio magazine ever published. Think of that $25 fee as $1 per month
for ARRL membership, and the remaining amount going towards
the magazine subscription.

The ARRL has represented US amateur radio operators for almost 80
years. I think it's safe to say that ham radio would not exist today
if the ARRL hadn't been fighting for us all those decades.

62. Re: Butternut HF2V self-supporting?

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-01 00:00:00 UTC
From: FSWF37A@prodigy.com
Message-ID: <3ljr51$aka@usenetw1.news.prodigy.com>
Source record: 249521

The HF2V is self supporting. Here on Long Island we get high winds, snow
and ice loading. The antenna whips around quite a bit and was bent over a
few times with ice loading......no damage to the antenna.....
The mast tapers down to about 3/8 inch at the top and you can't
effectively guy it. The weight of the guys will bent the antenna.
When the antenna was first installed I installed 12 foot top loading
wires. I used very light wires and light line because of the bending
problem.
During a week of ice storms the top load wires broke off one at a time.
(due to ice loading and the whipping action of the mast.
To my surprise the antenna performed better and better as each wire
dropped off!!
My guess is that the top loading wires added a horizontal component to
the pattern and diminished the vertical component so useful for DX.

thats my two cents...

73, Jim WB2TPS

> make sure the 610 gets to the FCC. Just send your completed
> 610 and $5 to me, I'll take care of the rest!
>
>
> Uh... uh... oh.. uh... I'm sorry. I thought I was W5YI for minute.
> Sorry...

Yeah what a con.. I got one of those "offers" too. Came with a blank
form 610 from which the instructions had been conveniently removed.

Somewhat in his defense, though, he DID include a Reply envelope,
which I think costs 65 cents now if you use it, and he DID send me the
610, which I did need, and which I did use.. of course I did mail
it direct to Gettysburg. Wonder how many $5 he gets..

I suppose I should at least send in 32 cents for the postage to me..

PR>delivers 600 watts output 80-10m. The transceiver can put out 100w.
PR>How much need would I have of 600w especially if I want to 'work the
PR>world'? I really didn't plan on acquiring the amp, but now that I
PR>have it, should I keep it, or would I do okay without? I plan to
PR>use the Butternut 80-10m vertical that came with the setup until I
PR>find some real estate where I can string up lots of long dipoles.
PR>I'm new to HF, and your expert advice will be greatly appreciated.
PR>Please respond via e-mail. 73 de Bill, KB8USZ

Hi, Bill.
I think it's great that you even *consider* not using all of the power available to you. I personally wish many of the people on HF would turn those doggone amps off, and they'de see that there's no need for 1.5KW on 20 meters to get from New York to Penna. state!!

Seriously, though, I have worked all my ham life (14 years) on HF with just 100 watt-type rigs. I have always had either limited space, or horizontal dipole antennas. I have worked Australia, South Africa, Russia, Western Europe, West Africa, Hawaii, French Polynesia, (the list goes on..... get the picture??) And these were *NOT* during high sunspot activity, necessarily!

The truth about power is this - your antenna's effiency (ability to produce *usable* radio waves, not waste power into heat) is one of the largest determining factors about how far your signal is going to go. If, as you describe, you're going to put up a Butternut vertical, AND you make sure to have an excellent ground system (if it's ground-mounted), then you should probably be able to work the entire world, using the proper band(s) at the proper times of the day, and season, (etc...) with 300 - 400 watts. If you were to use dipoles, I would probably cut that number to 250 - 300 watts. Why? Because, believe it or not, a dipole is *the most efficient* (in terms of power used to radiate a signal, versus power used to heat up the antenna) antenna around.

The increase in signal strength at the receiving end between a 100 watt signal and a 200 watt signal is purported to be 1 db (decibel), or 1 S-unit. To go one *more* db, or S-unit above 200 watts requires..... 400 watts! To go one more above that, 800 watts! Above that, 1600 watts!!! Get the picture?? So, unless you're on the "hairy edge", or just barely *not* making it, going much above (I'd say) 300 watts does little for you.

Looking back at 14 years of HF log book records (ALWAYS including the other guy's antenna type, power level, and signal report) I can

confidently say that there is little discernable difference in the quality, or readability of a signal from a station running around 400 watts and a station running 800 watts, or more.

The FCC asks, (in fact, demands!), that amateurs use "the minimum power necessary to establish communications". *I* take that personally! I'm sorry to see that others clearly DON'T. Again, I really appreciate your even _considering_ the question! I think it bodes well for our future if hams consider such things!

Remember - this is just *my* experience. And I want to caution you to one thing that I've heard hams all over the world say (repeatedly)! -- The quality of your antenna (NOT its purchase price!) is THE SINGLE MOST IMPORTANT CONSIDERATION in your amateur radio installation.

A $ 1,000,000.00 radio with a crummy antenna is gonna' sound like weasle piss on the low bands!! A $ 100.00 hamfest-special is *GOING* to get you contacts around the world, if it's hooked up to a nice qubical quad, or an antenna with HIGH efficency!!

- Just my $.02!

67. Q: How to ring telephone?

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-01 00:00:00 UTC
From: sipy@ripco.com
Message-ID: <D6D5E8.I8@rci.ripco.com>
Source record: 249526

ML>Subject: Q: How to ring telephone?
ML>Date: Fri, 31 Mar 1995 09:13:51 -0500
ML>NNTP-Posting-Host: po8.andrew.cmu.edu

ML>Anyone out there know what voltage, current, signal, is needed and which
ML>wires are used to make a telephone to ring?
ML>Best, Mark (WA3RMV)

Yep! You can do it with as little as 20 volts AC, if you have an electronic telephone, or probably about 40 - 50 volts AC if it's an old 2500-style (read: "(ma)- BELL SPECIAL" single-line phone).

The voltages that the telephone company use are certified to be between 40, and 140 volts at 20 Hz. The telephone line in a typical house is about 2.4K-ohms away from the central office. (That means you could use a 50 volt AC source, and two 1.2K-ohm resistors in series with the phone.)

Be very careful to use the RED and GREEN wires. Use of other wires can have very bad side effects on some phones!! (magic smoke!)

The RED wire AT THE JACK is always the "ring" wire, which is connected to the phone company's NEGATIVE supply line. The GREEN wire AT THE JACK is always the "tip" wire, which is connected to the phone company's POSITIVE supply, WHICH THEY GROUND TO THE EARTH AT THE PHONE COMPANY.

Yes, that's right, the phone company uses a NEGATIVE supply voltage. -48v to -56v, to be exact. Again, the ringer voltage is probably somewhere between 70 and 120 volts AC (20 hz) by the time it gets to your phone.

Good luck, and be very careful! These voltages HURT ALOT, and could even be fatal! (Yes, I know I'm sounding sscccaaarrrrrryy! It's a STRONG word of caution to those that have never tried messing with this stuff before!!)

Mike Sipin.

BTW - If you have never worked with these voltages before, or are not ABSOLUTELY SURE what you're doing - DON'T! It's better to ask a friend than be dead!

- Cheers.

68. Repeater (and other) fixed antennas

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-01 00:00:00 UTC
From: NEEDHAME@ZIAVMS.ENMU.EDU
Message-ID: <950401090143.6d20@ZIAVMS.ENMU.EDU>
Source record: 249527

I wonder if anyone has more than passing experience using mobile
antennas at a fixed location? This would at least solve the problem of
high wind, as most mobile antennas will withstand 100 MPH wind (or speed!)
with no problem.
I used this type of set-up when I was stationed in Korea a few years
ago. I used mag-mount mobile antennas for 2 & 6, and put them on five-
gallon bucket weighted with sand. For HF I used a Hustler mobile with the
Expanda-5 and resonators for 10, 15, 20, 40, & 75. The two VHF set ups worked
really well, with 6-meter contacts to Australia on SSB and I heard Argentina
on CW. Two meters got me into Japan easily. HF was a different story, as
anyone who's ever worked HF mobile can tell you.

So anyway, I was really wondering why not use a Hustler SF-9 or
CG-144 as a two-meter repeater antenna? They probably offer enough flex
that weather would probably not hurt them.

pruth@ocvaxa.cc.oberlin.edu wrote:
>I've acquired an HF station which came with an amp/autotuner which
>delivers 600 watts output 80-10m.

When I lived in Texas, I used to check in with a group on Pitcairn Island
once a week. At the time, I was using the typical 100 watt rig.

After moving to PA, however, there were many occasions when conditions
were too poor to be heard. So, I purchased an old Gonset amp which ran at about
600 to 800 watts output, and the difference at their end was night and day. There
were many, many times when I could barely be heard without the amp; but had
an enjoyable QSO with it running.

Incidentally, if you're trying to decide what the advantage is, signal-wise, think
about the minimum carrier-to-noise required for intelligibility, and compare
it to the gain provided by a high power amp.

Don't get me wrong, I operated 100 watts and less for better than twenty years.
Still, amplifiers have their place and you should probably try it for six months or
so before making a decision. The biggest mistake I ever made was when I sold
my mint SB-220 with a new set of spares after only three months use. Still
kickin' myself for that one!

If your looking for a 2-meter contact with a trucker, you may try the frequency 145.000, which has become the norm simplex frequency for truckers and pikers.

As a courtesy, if you are traveling the same direction, move off the frequency up to 145.10, if you are moving away from each other move down to 144.90

I have never failed to make at least once contact every 75 to 100 miles using this frequency... Of course, it was usually with pikers.

A piker is usually a traveling salesman....

Don't believee it, the ARRL sucks, always has and always will. They are nothing more than a glorified publishing company, who don't even proofread the supposed textbooks they put out for gross errors...

The more they interfere with the FCC the more we lose.

Don't ever believe they'll go to bat for you, I have been a ham for more years than I care to remember, and I've never seen them do one good thing for the service or for any individual ham...

76. Field Day Power Source

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-02 00:00:00 UTC
From: w7el@teleport.com
Message-ID: <3lktib$1u6@desiree.teleport.com>
Source record: 249314
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.misc

An Innovative Field Day Power Source

My traditional Field Day operation consists of backpacking into a remote location and operating with QRP gear. Although solar power is used during the day, a battery is necessary for nighttime operation. The battery required for rig power and lighting is a major contributor to the total weight which must be carried, so I've looked long and hard for ways to reduce the battery requirements without having to make further reductions in signal strength.

A recent magazine article got me thinking about a solution to this problem. It permits a very substantial reduction in the battery weight. The trade is a couple of extra items to carry, but they can be made much lighter than the battery they replace. The two additional items are an additional wire antenna and rectifier. This method does require that you use a gain antenna for the main transmitter, as I'll explain, but I normally do this anyway. It works like this:

(This explanation is oriented toward QRP operation, but the same principle can be used at any power level. In most cases, the necessity for using a generator can be completely eliminated with this method.) Suppose your rig produces 5 watts of RF at 50% efficiency, and your antenna has 6 dB gain. This means that the output from your antenna is 4 X 5 watts or 20 watts. You place the auxiliary antenna in the field of the transmit antenna so that it intercepts about 15 of the watts. (This is done by making the capture area of the receive antenna equal to 3/4 of the capture area of the transmit antenna.) The output from the auxiliary antenna is connected to the rectifier, which converts it to DC. This can be regulated if necessary. If the rectifier is 90% efficient (not hard to achieve), it will deliver 0.9 * 15 = 13.5 watts. Since the transmitter is 50% efficient, it requires 10 watts of DC input power, leaving 3.5 watts left over for lighting or other incidental uses. The original 5 watts from the rig is still being radiated by the transmitter antenna and provides the signals for Field Day QSO's.

Of course, the extra power is available only when you're actually transmitting. I direct it to a battery charger and "float" a small battery which only has to hold enough power to "jump-start" the system, and to provide receiver and auxiliary power between dots and dashes (or syllables, for you SSB types). In most cases, the excess power available when transmitting is more than enough to replace the power used during the off periods. With the old system, the battery had to store enough to operate the rig and lights all night, so the reduction in battery size is tremendous!

The battery size can be reduced even further by making a system which produces power continuously instead of just when you're transmitting. This is done by using a second transmitter, transmit antenna, and auxiliary antenna on a different frequency. If the auxiliary antenna is designed to have a larger capture area than the transmit antenna, all the radiated power will be intercepted. (If this isn't possible, an automatic 10 minute ID'er should be connected to the auxiliary transmitter.) Using the power levels discussed above and full signal capture, a full 8.5 watts of excess power would be continuously available from this system. Once the system is started, the generator or battery can be disconnected altogether, since the power to run the rig is provided by the rectifier output. Due to its increased complexity, however, it probably is suitable mostly for larger Field Day operations. Remember, the system can used at any power level. For example, if a 100-watt transmitter is used for the auxiliary system, a full 170 watts of excess power will be continuously available.

A similar system can be constructed at the home QTH with the addition of a DC-to-AC inverter, and can lead to total independence from the power grid. In fact, people testing the system have reported quite a tidy income from selling surplus power TO the power company!Being able to create innovative solutions to real
problems is the true
reward of spending years studying at the feet of the great antenna gurus. I'm happy to be able to pass this important breakthrough along in time for you to implement it for the upcoming Field Day exercise. From April 1 to June 24 should be enough time to get it running, if you get started now!

73,
A. Guru

77. "Spectrum Access Tax"

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-02 00:00:00 UTC
From: daveb@perth.DIALix.oz.au
Message-ID: <3lkuod$cc7$1@perth.DIALix.oz.au>
Source record: 249315

I have been following this group for a few months, but have not seen anyone else post on this issue.

Australia is proposing to introduce a "Spectrum Access Tax", as a surcharge to amateur licence fees. Sample (proposed) structure:

Unrestricted licence renewal: $25
Spectrum maintenance charge: $ 9
Spectrum access tax (new): $35

Total annual renewal: $69

The tax is intended to charge for our use of a public medium, ie the airwaves. At the same time, CB radio users will be issued their licences *free* of charge!

Does anyone know of any other country that does this? Will they next tax our use of another "public medium" - the air we breathe?

Dare one suspect that the bias in favour of CB is the effect of our (socialist) government viewing amateurs as the "idle rich"?

I doubt that even the phone would work 90% of the time :-)

Seriously, I hate to say this but it probably wouldn't work 9%
of the time. 0.9% may be more like it. Boston to Korea is a LONG
haul and even under the best of conditions it's not always possible.

Better your friend gets an e-mail account on an internet provider
there.

You might check with Dow-Key. About 5 years ago they were located in Ventura,
CA and still selling relays. They could advise you about power ratings and the
ability to convert the solenoids.

I regularly run a full KW to a 75 meter vertical array which uses 115 vac coil
dow-key relays for switching the phasing harness which steers the beam for me.
I think I paid $15 for the most expensive one at a swap meet.

: I happened to be thinking about this the other day. I am a new ham
: who is planning a long road trip in the near future. I was thinking
: about getting a license plate frame (or a window sign) announcing
: that I am monitoring 146.52 looking for contacts from other hams.
: Would this be effective? I will be alone, so I don't feel comfortable
: scanning for repeaters and having to fiddle with offsets/pl's, etc.

A couple of years ago I drove from NJ to Kentucky in my Isuzu Trooper
with a sign in the rear window that I was monitoring 146.52. I
thought the sign, along with my call license plates would get
at least an occasional "on-the-road" contact. Sorry to report
that I never had a single QSO on the simplex frequency.

: If my method is not effective, any suggestions? I am interested
: specifically in something that will attract the attention of other
: hams without announcing to every thief in the universe that I have
: several hundred dollars worth of radio equipment in my vehicle... :)

One thing that'd be helpful (IMHO) would be to encourage more hams
to monitor 146.52 on a routine basis. Perhaps QST and the other ham
magazines could help spread the word too. Most rigs scan, so while on
a trip it'd seem like a good idea to scan the ...52 simplex freq
along with any other repeater frequencies you might program in for
any specific trip route.

Good luck and I'm open to any other ideas too.

Get what? Maybe we don't ``get it'' because we don't know what ``it''
is supposed to be. Tell us white men what ``it'' is so we'll finally
``get it.''

Hi Bill, The Callbook is probably your best source for finding a list
of hams in the Philippines. I'll go up to the library tomorrow and
see if their copy lists a Filippino amateur organization.

PZ>I'm learning CW for the my exam but I have a little problem.

PZ>I'm reciving 15 wpm with no problem but when I increase it to 17 wpm
>I only recive somthing like 80%. Can someone tell me why and how can I
>change it.

There is NOTHING unusual about your experience!

Most new operators experience a learning "hump" somewhere in the 16-19 WPM range. It represents a way-point in learning to copy CW by ear and is generally one of the points at which you stop having to make mental conversions of the sound, to a mental picture of letter, to the written character on paper. You begin hearing the sound and write the letter... no more middle conversion.

How to get over the hump? Practice, practice... practice! On-the-air (operating) practice is best (by far), but listening on the air is better than using a PC program or tapes. Copying CW through a bit of QRM or QRN helps you to learn to concentrate on "tuning" your ears to the sound of the CW note and to exclude all other distracting sounds while copying CW.

Also, if you are not doing it now, try to copy stations which FORCE you to WORK for perfect copy... find those stations which you can only copy 80-90% accurately... this way, you know you are being challenged to work harder. In the classes I've taught over the past 20+ years, I send characters at 18-20 WPM, with extra spacing between characters. This way, the student immediately learns to hear the CW character at a much higher speed and then the only thing he needs to do to improve his speed is to reduce the spacing between characters to go from 10 to 18-20 WPM.

But, practice is the answer at this point... just continue to work hard and practice several times each day, no more than 30 minutes at a time.

Good luck.

>about a year and a half ago, and it took right around 16 weeks to
>get to me after the test. It's a real long wait, but well worth it.

Unfortunately, you're a bit behind the times...

As of Dec 20, 1994 (I think that was the date), the FCC ruled that
amateurs may now OPERATE as soon as their license has been issued (e.g.
as soon as the callsign goes into the computer, and BEFORE the license
is even mailed).

The new phone number for checking on the status of your license
application (at least to see if a license has been issued) is:

1-800-322-1117

License processing now takes (maybe) 1-2 weeks, and has takes as little
as 2-3 working days.

96. Possible Repeater Licensi

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-02 00:00:00 UTC
From: Tom.Hammond@f67.n289.z1.fidonet.org
Message-ID: <531_9504040646@woodybbs.com>
Source record: 249334

WRF>This is a request for any information having to do with any current
>or know upcoming proposals -to- or -by- the FCC with regard to
>specific licensing of amateur stations in repeater service.

WRF>I have in front of me a form ostensibly sanctioned by the Mid-America
>Coordination Council (an organization I have never heard of). In the
>first paragraph a vague reference is made to "possible FCC regulatory
>proposals". The second paragraph cites the "proposal" (vaguely cited
>in the first paragraph) as justification for advising the providing of
>certain information to the applicable frequency coordination authority
>since it will be necessary for the operator of an amateur repeater to
>obtain an FCC amateur repeater license.

Reid:

The Mid-America Coordination Council, Inc. (MACC) is an organization of state frequency coordination groups, representing twenty (20) states, from Ohio to western Washington. It was formed in order to help foster frequency coordination, to help formalize the coordination process and to provide some more uniform 'standards' through which the coordination process worked. The following states (or portions of states) are members of MACC:

Arkansas
Colorado
Iowa
Illinois
Indiana
Kansas
Michigan (Upper Penninsula)
Minnesota
Missouri
Montana
North Dakota
Nebraska
Nevada
Ohio
Oklahoma
Oregon
South Dakota
Western Washington
Wisconsin
Wyoming

I have before me, a copy of the REPEATER SYSTEM APPLICATION FORM, and cover letter, prepared by Don Breazile (N7MYR), WY Freq. Coord., and

sent to all know repeater operators in Wyoming.

The cover letter makes reference to "...possible FCC regulatory proposals.." and that the "...proposal may require licensing of repeaters...". It appears that this may be the focal point of your concern.

I'm not sure if it has finally been released (it seems it may have been released just recently), but the FCC is proposing to, again, make available repeater licenses and repeater-specific callsigns. There have also been "rumors" (nothing more) that repeater licenses may not be issued to uncoordinated repeater systems.

Although I must admit that the text of the cover letter might have been worded better, it appears that your coordinator is attempting to "do the right thing" and ensure that his database of coordinated repeaters is up to date and will contain all the data he might have to certify to (if required to do so), if asked by the FCC to confirm that a particular repeater system has gone through the coordination process and has been issued a valid coordination.

A repeater frequency coordinator must have certain information in his database to permit him to do a credible job of providing coordinations. He must have ACCURATE, and CURRENT, information about a repeater, its REAL location (physical and lat/lon), input/output frequencies (incl.. all links), elevation, HAAT, power output (ERP), trustee (call/name/ addr/phone), repeater callsign. If these data change or are not available to him when he does a coordination, he cannot take steps to protect your repeater or those of the other repeater owners in his state from possible interaction and interference.

To that end, the coordinator must also know which repeaters are active and which are not. It's hard to believe, but there are MANY hams who will request repeater coordinations, receive them and NEVER put a system on the air...EVER..! This is not only greedy, but it is also ties up frequencies which are then unavailable to others who WILL put them to good use... not just hold them for their own ego or for whatever reason they may have. Almost all coordinators allow 6 months contruction time for a system after it is coordinated... many will allow another 4-6 months "extension", if required. But there are still many users who never put their coordinated pairs on the air and never bother to notify the state coordinator of this fact so the the frequency can be returned to the pool, for use by others. This system application (registration) form serves to not only gather the required information about a repeater system, it also asks the repeater owner to certify that his system is on the air and not hogging valuable spectrum by being coordinated but not on the air.

I'm not sure if this response give you the information you require. If it does not, I suggest you contact Don Breazile directly and ask him to give you a better explanation of any further questions you may have.

T.Nelson@ix.netcom.com (Tim Nelson) writes:

> Can someone give some information on emails from the internet
> to packet and back again in the southeast USA.

Don't know of any in that part of the country, but you could use mine.

*** Please note, effective 11/1/94 the address of the internet side of
the gateway has changed from gate@wb7tpy.ampr.org to gate@stat.com
Please notify your contacts immediately of this change ***

How to Use the WB7TPY
Packet <-> Internet Gateway

First, some brief operational notes:

(1) Messages must not contain any foul language, or commercial purpose.
(2) Messages can only be sent to countries that the United States has
a third-party agreement. All others will be destroyed.
(3) Messages from the internet should be less then 5K in length.
No files should be sent.
(4) If you have questions, please do not hesitate to contact me either on
packet radio: WB7TPY@WB7TPY.AZ.USA.NA -or-
Internet : david@stat.com

(5) Have fun. Use the gateway as much as you like. That is what it is
there for.

From Internet to Packet

Send mail to the internet address of:

gate@stat.com

The first line of text must contain a full packet address, preceded with the
word "Packet:"

For example, mail to my packet address, would have the first line of text;

Packet: wb7tpy@wb7tpy.az.usa.na

** NOTE: this line MUST be left justified.

From Packet to Internet

Send as private mail (never a bulletin) to the packet address of:

gate@wb7tpy.az.usa.na

The first line of text must contain a full domained internet address,
proceeded with the word "Internet:"

For example, mail to my internet address, would have the first line of text;

Internet: david@primenet.com

*** Remember, this has to be left justified

David, I agree with you that the tests' emphasis on memorization
of trivia is stronger than it should be, and that issues of real
concern, technical and safety issues, are under-represented.
However, there is a legal principle involved that must be considered.
By testing for knowledge of legal requirements, no amateur can use
the defense that "they didn't know" when they break the rules.

I'd much rather the tests be open book. There really is no need
to memorize most regulatory items since they are subject to change
at political whim. It's much better that the applicant demonstrate
the ability to access, interpret, and apply the rules as needed
rather than to just parrot some memorized answers. Of course that
would require the applicant, and the graders, to think, and that's
discouraged in our service.

Similarly, I agree with Albert Einstein that there is no need to
clutter the mind with trivia such as physical constants or formula
when they are easily accessed at need from handbooks. Therefore,
I'd make the technical portions of the test open book as well.
But I'd structure the questions so that the applicant would have
to think clearly and look up and apply the *correct* formulations
to answer the questions.

All that is probably too much to ask of the test preparers. They
often have only memorized the minimum requirements, and can't
think through problems clearly themselves. It's neither simple
nor easy to prepare a good exam.

>observed on HF?

No. LDEs have delays of 2 or more seconds, and represent propagation
far extended from a long path great circle. What you experienced is
probably just multipath from propagation off both the F layer and
the E layer. Since sporadic E clouds aren't usually of large extent,
it's possible for this to happen with one station while other stations
not on the same ray path won't show the multipath buzz.

>>ratio isn't in our favor.
>
>so it will be awhile for something cheap to come out!?

Probably a very long while.

>what about transiever kits or stamatics?

Down East Microwave offers a number of transverter kits for the
various amateur microwave allocations. I don't know if they
offer a narrowband transverter for 10 GHz at this time or not.
All you really need is a stabilized frequency source and a
good microwave mixer. The best source of those is on the surplus
market.

>>As to frequencies, see the ARRL bandplan. Since activity is so low
>>on 10 GHz, most amateurs tend to congregate around a small band of
>>frequencies so they can find each other.
>
>ok, then i should look around for some specific freq.s

Yes, ask around your area. Since you're unlikely to make contacts
farther than the coverage of most of your local repeaters, at least
at first, knowing what others in your local area, if any, are doing
is critical to your success.

>>Much of the 10 GHz activity is based on converted surplus equipment.
>>That can be very cheap if you are lucky enough to come across some
>>of this equipment. And, of course, the wideband gunnplexer route is
>>very inexpensive, though naturally performance is rather limited.
>>Many amateurs find they have to scratch build their own equipment.
>>That's not terrilbly difficult, and there are some published circuits.
>
>and i can find them where? <plans>

Two starting places for designs are the ARRL UHF/Microwave Experimenter's
Manual and the two volume RSGB Microwave Handbook. The latter is, as
is typical of RSGB publications, very informative, but the former has
more on parts likely to be more easily available in the US.

G'day,

I wrote Ham Log 3.1, the amateur logging program.

I could help but comment how at a recent field day where Ham Log was
on display, a prospective "client" wanted the program for contests.
His requirements were that it should copy the "CQ test", check for
duplicates and then send a reply with appropriate report - ALL
AUTOMATICALLY.

My reply - Why go into the contest?

I think he thought I was an idiot, explaining that if you want
to win, you have to have these facilities.

One of the few who didn't buy Ham Log 3.1!

I remember the article but would probably never be able to find it.
Don't despair because the circuit was pretty much copied from the
application notes. I was tinkering with the AMI S3529B and S3528B
switched capacitor filters a while back. They are available from
Active Electronics for about $3 or $4 each. One is a high pass and
the other a low pass with very sharp cut off. Just connect up a cheap
color burst (3.58 MHz) crystal and a couple resistors and capacitors
for anti-aliasing filters. The interesting thing about these is
that they have a 6 bit input that allows you to digitally move the
cut off frequencies in steps of roughly 100 Hz.

Switched capacitor filters don't do all the fancy stuff like random
noise reduction and automatic notching that is possible with DSP.
However if you only need a simple, but very sharp, bandpass filter
switched capacitor filters work very well, are easy to use and
inexepensive.

I was looking around for the AMI data book so I could send you the
address but can't find it right now. Maybe someone else has the
address handy.

Thank you for some of the replys, and also for any one interested,
I have found alot on 2m meter, I often monitor 146.52 and am finding
alot of others do,
Also 14.302.5 is mostly drivers, but anyone is welcome....
3.940 has quite a few too..
and I have found 3975 to be a good one to check into, at least
when "the gnat" is not there, ..the Ga single side band net,
and best of 75 are both real frendly, and enjoyable, but I have
only heard a couple of drivers on..one was at home..

: along with any other repeater frequencies you might program in for
: any specific trip route.

: Good luck and I'm open to any other ideas too.
: --
: Bill Sohl K2UNK (Budd lake, New Jersey) (billsohl@planet.net)
: This is my opinion and I don't care about what anyone
: thinks because this is a personal internet account :-)
Something to think about on calling cq or such on 146.52
Alot of people do scan it, but most "lock" on any activity til it
drops for ahwile, so if they sre scanning, but some one on another
freq,(perhaps repeator) that is in theyre scan, the rig will stop.
Until that freq is clear, then it resumes scanning, also they may
be scanning several freq, in other bands so it may take some time

before they hit 146.52, I usuall make my ID"s kinda long to increase
the chances of theyre rig catching me, Ie:this is kb0kuz/mobile,
(pause but do not unkey) this kb0kuz listening on simplex for
anyone out there..more pause... this is kb0kuz." I know sounds
silly but, also I amy repeat it 2 or 3 times... I do catch a fair
amount of stations that say they were scanning and heard me...
as for the "bumper sticker" or license plate ..have not seen
to many do that..but I guess it would help to let anyone else
know you are on that freq..I don't think most "thieves'
would comprehend what it ment..but any mobile is wise not
to leave his/her vehical where they cannot see it....especialy
where no one can see it... I make every effort to always park
where I can see my truck, or I don't stay inside very long
at all, ...73's de KB0KUZ

Musta sent it to Oklahoma City, eh? The current address for the WE5F crew is:

ARRL W5 QSL Bureau
P O Box 50625
Midland TX 79710

He's on our local packetcluster, so if you had problems with THAT address,
lemme know and I'll inquire as to an alternate address for you.

Notes
=====

The distances were calculated using the International Ellipsoid of 1924 (polar radius 6356.912 km, equatorial radius 6378.388 km). Details of the calculation method are available on request.

Station positions were taken from the best available information, in the following order of preference:

1. Exact latitude and longitude where known
2. Locator sub-square center if given
3. Approximate latitude and longitude from geographical location.

Calculated distances may change if better information on station location becomes available.

Due to lack of publicity the table has received few entries since 1988, but I am sure that many new records have been made. I have now taken over as records co-ordinator, and would like to bring the table up to date.

I would also like to extend the table to include the best five QSOs for each band and propagation mode, instead of just the top one as at present.

If you have any information on a possible record or exceptionally long distance QSO please send it to the IARU Region VHF/UHF/Microwave DX record co-ordinator:

John Morris, GM4ANB,
35 Main Street, Hillend, By Dunfermline, Fife, KY11 5ND, UK.

Or via packet: GM4ANB@GB7EDN.#77.GBR.EU
Or via e-mail: john@kirsta.demon.co.uk

GC>Dues are scheduled to increase to $31 if they haven't already. Consider
GC>it a cheap magazine subscription. There aren't many monthly magazines
GC>you can get for $31 anymore. Plus there's the membership services offered
GC>by the ARRL, and you will have a voice in the largest US ham organization.
GC>Yeah, it's worth it.

GC>Gary

What? Just untrue Gary. There are hundreds that you can get for
$9-19 per year. If you get them through a discounter they cost even
less.

However let me hasten to add that ARRL membership IS a great deal
for those of us who can afford it. The outgoing DX QSl bureau is
a BIG selling point for me, even though they doubled the cost of
shipping cards.

If ARRL is going to $31 a year now AND has hundreds of thousands
of new members, then we should be ROLLING in the dough and can
hopefully get a lot more of the amateur agenda accomplished.

I just hope we can stay out of societal engineering and other
political causes that have nothing to do with amateur radio, like
promoting the acceptance of homosexual behavior or trying to
elimnate AM broadcasting in the shortwave spectrum, sigh!

Long live ARRL! 73 de AF4K

Message-ID: <0098E478.D27436C4@vms.csd.mu.edu>
Source record: 249404

Can anyone advise as to a few things about the convention and Dayton itself? This year will be the first time we attend - have tickets and hotel already. What I'd like to know about are the seminars (what when, how long, where), possible tips for getting around, "must-see's and must-do's", Dayton attractions and/or historical sites - as we will be attending with a non-ham and I am sure she will be just thrilled with the convention - and anything else that may be of interest?

As to the non-ham going with us - please don't tell me about the craft attractions - I'm aware of them, and as the only other woman in our group, I don't want to get stuck with going with her to that kind of attraction.

Direct replies would be appreciated, but replies to the newsgroup will certainly be read as well. Thanks in advance.

I feel it's worth it. Some of course may disagree, but the ARRL is our
voice with the fcc and other government entities. I have been actively
involved with the ARRL now for the past 3 years, and have never had any
problems. Might not agree on everything, but when does someone agree on
everything?

>a hayday...

Oh my, I'm sure you have. Now I'm a frequent critic of the ARRL, but they aren't evil incarnate. In fact much of what the ARRL does is quite good and useful. The publications you disdain are the equal of those from commercial publishing houses such as SAMS or Prentice-Hall, only less expensive. Sure there are errors, but that's true with nearly any publication. It's almost impossible to publish an error free book, especially if it involves a technical topic.

Now the level of writing skill employed in much that the ARRL publishes is not as high as I would like. That's partly a reflection of the amateur authors, and partly a reflection of the literacy level of the readers. But read some professional journals sometime, and you'll find writing that's even worse.

The ARRL's other services are also good, at least on a par with organizations like the AAA. For a system with a large volunteer component, the services are excellent. Their VEC program appears well run, and their technical assistance arm appears to be doing a good job. The contest and Dx desks seem to also be doing an adequate job. Of course there are always individual cases in any organization where someone drops the ball, but I don't think the ARRL is any more guilty of this than other groups.

Now the political arm is an area that deserves some critcism. On the one hand, they aren't vigorously active enough. There is no ARRL-ILA, no grassroots political activism, or any serious attempt to inform and activate the membership on key

issues. And on the other hand they tend to be reactionary rather than visionary when they do attempt to act. The ARRL has for the most part attempted to defend the status quo rather than pro-actively attempting to advance the cause of amateur radio. The ARRL has also attempted a close, almost incestous, relationship with the regulators. In fact, the ARRL has allowed itself to be co-opted by government in several cases. The ARRL's tactics and views seem more suited to a different era than to the methods and concerns of the late 20th century.

I must say that some of that is changing, slowly, and the ARRL may eventually, say a couple of decades from now, become in tune with the methods and concerns of the 1990s. But the ARRL does continue to lag rather than lead, and thus acts as a drag on progress. That needs to change, that *must* change, and only members can change it.

Amateurs in general, and the ARRL in particular, expend far too much energy fighting with their natural allies, and far too little fighting the real enemy. Any group that mainly fights among themselves over status and priviledge, and actively discourages new recruits, is not going to be an effective voice against the real enemies who are intent on shutting down *all* of their activities piece by piece. When the wolves are nipping at their flanks is not the time for the sheep to be bickering over who has the largest horns.

This is a message I recently read on a local Packet Board
****
Title : Civil Air Patrol VHF Scam!
We need to do some checking into the possibilty, at least in the State of Washington, that the Civil Air Patrol is going to be licensing all there members as no code techs and be using ham radio 2 meter repeaters. The federal government has given them VHF freqencies to use. But it seem that they would rather use ham repeaters then put up new repeaters and maintain there present ones. Not bad. We foot the bill for them. Also, from what I understand, they will be testing there own people by 3 VE's, and no one else will be able to observe! Have been a member in the past, I'am aware of the type of testing that went on there. It wasn't really a test at all. More like, we will all go over the test together, and discuss the questions! This is something that needs to be looked into. Don't get me wrong, if they want to become Ham Radio Operators, I have no problem with that. But let's see if they should be useing there own repeater for civil air patrol matters first. 73 Alan N7EAY

i sympathize with all those who are caught in the same predicament as this. out here in the bay area, there is a mixed bag of old farts who complain about everything they can think of, to younger people like myself who did the smart thing and got away from 2-meters while we still could. the 2-meter repeater band out here is a virtual wasteland of overcrowded conditions and elitest attitude old-timers who could care less about the rest of the world. don't get me wrong, there are a >few< who aren't this way, but for the most part, well...

in any case, it seems the intelligence level increases when you move to the 440 band out here. lots of technical talk and intelligent conversation. it's a lot better than tuning into 664 or 676 to listent to the old guys argue about politics. plenty of repeaters to choose from and the people on them are a lot more likely to answer your call for help in an emergency than the guy on 146.64 who asks you 4 or 5 times repeatedly if you really have an emergency before he even considers bringing up autopatch for you.

TM>Message-ID: <o6Ts3c1w165w@bssbbs.com>
TM>Organization: Brian Smith's BBS +1 619 582 0875

TM>Ok folks, I have made several phone calls to settle this dispute about
TM>taking ht's into area amusement parks, specifically the San Diego Zoo and
TM>Wild Animal Park, and Six Flags in Valencia, Ca. I have spoken with reps
TM>from the zoo, and 6 flags, and both have basically agreed to let ht's in
TM>the park. It seems that most folks are just paranoid that we will
TM>interfere with their freqs. I suggest that if you have trouble getting an
TM>ht in a park, ask to see the head of security, and very politely, and
TM>calmly explain that there is no way that the freqs you will be using
TM>would interfere with the freqs they will be using. Also offer to use ear
TM>or head phones. There should be no problem. Hope this helps.

TM>Tuck Miller, KC6ZEC
TM>Affiliated Club Coordinator ARRL San Diego Section
Hi Tuck
Thanks for the info. on taking ht's into area amusement parks.I have
wondered if it was ok to do so.Now the next time someone has something
to say about it I will have some ammo to throw back.
Thanks

In a previous article, c002@Lehigh.EDU () says:

>>SSB Electronics' transverters are certainly expensive, but they are
>>of high quality. Several factors are responsible for this. First,
>>there is a very low volume demand for this sort of equipment. Second,
>>the equipment uses some mildly exotic parts. And third, the mark/dollar
>>ratio isn't in our favor.
>
>so it will be awhile for something cheap to come out!?
>what about transiever kits or stamatics?

See May/June 1993 QST (KH6CP transverter...not for a newcomer but not too
difficult to build if you've built any of the no-tune xverters.)

>
>>As to frequencies, see the ARRL bandplan. Since activity is so low
>>on 10 GHz, most amateurs tend to congregate around a small band of
>>frequencies so they can find each other.
>
>ok, then i should look around for some specific freq.s

10368.1 MHz is usually used as the calling freq. for weak-signal CW/SSB. Be
ready to follow drifty signals!

138. Visual Method of Predicting Band Openings

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-02 00:00:00 UTC
From: ac3l@ix.netcom.com
Message-ID: <3lmvrv$pd0@ixnews3.ix.netcom.com>
Source record: 249414

Has anyone every heard of a method of predicting band openings by observing the sun? I have noticed over the years that I can tell when 10 meters is open for DX by observing the sky. If you start watching the sky you'll find different patterns that seem to exist (to me at least) which correspond with 10 meter openings! The sun seems to go through at least 3 sizes (visually) [of course NEVER EVER look directly at the sun!]. There are times when the sun appears to be a sharp disk shape and the clouds in the area near the sun are opaque. In this state the band is "OPEN". By "open" I mean the ability to work Africa, perhaps Europe, Australia, etc. from the east coast [sorry but I don't travel so I can't comment on other areas]. Other times the sun seems larger and has a fuzzy edge to the disc, the clouds appear semi-transparent, and the sky is slightly white looking around the area of the sun. Here the 10 meter band can be open but only during the traditional DX seasons on 10 meters (fall/winter). I am of course speaking of east-west DX not North-south. The final state I've noticed is when the sun appears very large indeed and the clouds are translucent. The sky around the sun is very very white, rather than any shade of blue. When this happens, 10 meters is always dead (East-West).

I'd like to hear if anyone else has noticed this or has read anything about such a condition. Please be careful about observing the sky, but I'd like to know if others can confirm or prove wrong what I have noticed thoughout the past 6-7 years.

Joe & Don-
A Ham who lives here, is a trucker. Sometimes he hangs out on
14.302.5. I managed to catch him there once, and noticed a lot of
truckers were around when the nets weren't in session.
In this part of the country, there is a 40 Meter "SOUTHCARS" net
(Southeast Coast Amateur Radio Service?), which seems oriented towards
travelers. It isn't unusual to hear a trucker there.

Source record: 249416

Maybee that is how the testing is done in the Squadron that you once belonged to but believe me the CAP testing practices elsewhere is not the same. As for the use of Amateur Radio for use by CAP the National Radio Operations manual is pretty specific as to what types of Communications can take place. If a member wants a FCC Amateur License great everyone I have ever conversed with was a very good operator. As for NO-CODE Licenses the horse has been dead on that one for three or four years they have not hurt the hobby one bit.

Yes, there will be testing, but NO walk-ins - by appointment only. To pre-register, send:

Completed FCC Form 610
A copy of your license (if any)
A copy of your CSCE credit (if any)
Check or M.O. for $5.90 made out to "ARRL/VEC"

to:

L. T. Jones, W8RLW
708 Mapleside Drive
Trotwood, OH 45426-2540

Bring with you: your original license (if any), your original CSCE (if any) and two pieces of identification, one must be a picture I.D.

Testing begins at 10:00 a.m., Satruday 4/29/95 at:

Meadowdale High School
4417 Wiliamson Drive
Dayton, OH 45416

doors open at 9:00 for check-ins.

For directions to Meadowdale High School check with Talk-in. Free shuttle bus is available from Hara Arena to Meadowdale High school.

For more information contact L.T. Jones at 513/837-0271.

Good luck!

SB DX @ ALLBBS $OPDX.201
Ohio/Penn DX Bulletin No. 201

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 201
BID: $OPDX.201
April 3, 1995
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, K4CEF & Southeastern Cluster Group, Five-Nine Magazine, K5PC, KF5ZC, W6SWM, W3OVV/6, KD7H, N8BJQ, DF4RD, HL5KY, J28GR JH2PDS/1 and DL7VEE & DXNL for the following DX information.

5X, UGANDA. Frank, 5X4D, has been active almost daily starting on 21295 kHz around 1800z, and then he moves to or around 14245 kHz at 1900z. There has been some talk that Frank may be leaving on the 3rd of April. QSL via IN3DYG. Eugen, 5X4B, was heard operating PACTOR on 14073 kHz at 2040z.

9M0, SPRATLY. The group of Japanese and Malaysian amateurs who were active as 9M0A from Pulay Layang-Layang, will probably be QRTed by the time you read this. Their planned DXpedition was slated to end on April 3rd. QSL via JA9AG. If you missed this group, you will have a second chance to work Spratly. A group of Philippine amateurs will activate DU0K from April 10-16th.

CU9, CORVO ISLAND (PORTUGAL). This Portuguese island will be activated by a group of CT nationals between the 13th and 16th of April. Their callsign was not mentioned or plans of band activity, but the island has an IOTA number of EU-089.

ET, ETHIOPIA. Three stations were active this past week. ET3KV was heard on 18117 kHz around 1930z. ET3BT was heard working "FREE STYLE" on 14226 kHz around 1915z. ET2AA was on heard on 21240 kHz around 1345z.

J2, ILE DES SEPT FRERES (SEVEN BROTHERS ISLAND), DJIBOUTI. OPERATORS J28FD, J28GR and J28BQ will activate IOTA AF-059 from April 14-21st. The group will use the special callsign J20SF. Activity will be on CW/SSB and probably the IOTA frequencies. QSL via F5LBM, 38 Chemin du, Plateau, 67 500 Haguenau, France.

KH0, MARIANA ISLANDS. A group of Japanese operators will be active as AH0Q on 40-10 meters, from April 7-11.

P5BK, A NORTH KOREA SLIM. A station signing P5BK has been confirmed a "SLIM". Several people have received faxes and phone calls from Kan, JA1BK, stating that he has no knowledge of this station.

TJ, CAMEROON. Jim, TJ1JB (ex 5X1B), has been active on 20 meters CW (around 14027 kHz between 1930 and 2330z). He is presently working for the American embassy in Cameroon. QSL via KE9A.

VK6, FAURE ISLAND (AUSTRALIA). Mal/VK6LC, Dave/VK6DLB and a Medical Officer named Rhyon will be traveling to this island in the North Western Shark Bay Island, from May 12-16th. The callsign for this new IOTA will be VK6ISL. They will have two stations on the air using the following suggested times and frequencies:
14260 khz - 0400-1600z (2300-2400z l/p N.A.)
21260 kHz - 0400-1000z
21190 kHz - 0100-0200z (Australia)
7084 kHz - 1800-2300z
7220 kHz - 1100-1300z (N.A.)
3797 kHz - 1100-1300Z (N.A.)
QSL via CBA: Oceania via VK6LC, Europe via I1HYW and N. America via K1IYD.

XV, VIETNAM. XV7SW reports in a note to K5ESW that he has been very busy as of late with business affairs, but that distraction has ended and he will start some activity on the low bands. He is only allowed certain frequencies to operate on, and he has applied to operate on 7012 and 1827, both of which seem better than the previously assigned frequencies. He is also allowed to operate on 3505 and will put up a sloper from a 24 meter high tower which is close by in the Embassy compound where he lives. In fact, there are two towers available to him which are 55 meters apart. His main problem seems to be finding antenna wire and a suitable matching capacitor. His antenna on the high bands is the Embassy's log periodic, and he says it is quite good. He advises that he is primarily a low bander and for us to be patient. He will be on the low bands soon. No length of time was given for his tour of duty, but hopefully he will be active for next low band season.

DAYTON DX DINNER ANNOUNCEMENT. The Southwest Ohio DX Association is pleased to announce the Tenth Annual DX Dinner which will be held on Friday, April 28th, 1995 at the Stouffer Center Plaza Hotel, Dayton OH. The price of the dinner ticket is $28.00. There will be a cash bar at 6:30 with dinner at 7:15. If you are interested, tickets must be purchased in advance, and are available from Tom Inglin, NR8Z, 4061 Eaton Rd, Hamilton OH 45013. Please make checks to payable to SWODXA, and send an SASE for ticket return. Seating will be limited, so please order early. If you wish to sit as a group, it would be appreciated if you order as a group. All seats will be reserved. Eric Scace, K3NA, will be the featured speaker. Good seats are still available. For information, contact Steve Bolia, N8BJQ, at (513) 429-9954 voice / (513) 429-0218 fax or via InterNet at SDB@AG9V.AMPR.ORG

1995 JAPAN INTERNATIONAL DX CW "HIGH BANDS" CONTEST by Five-Nine Magazine will take place starting at 2300z April 7th until 2300z April 9th. The bands are 14/21/28 MHz. Entries are: Single Op Multi Band, Single Op Single Band, Multi Op Single TX and Single Op Multi Band QRP (5W out and QRP stations must send homecall/QRP). Contest exchange: JA stations (RST+JARL Prefecture Number (max 50)) - DX stations (RST+CQ Zone Number). Multipliers: Number of different Prefecture Numbers. QSO Points: 14 MHz - 1 point, 21 MHz - 1 point, 28 MHz - 2 points and QSO with /QRP station - Band points x 2. Score: Total QSO points x total mulitpliers. For more details contact "Five Nine Magazine": P.O. Box 59, Kasata, Tokyo 144, Japan.

FAX YOUR DX INFORMATION NOW! Faxing is available Monday/Wednesday/Friday from 0430 to 2330z only. The number is 216-237-8208 and the FAX card is sharing the same phone line as BARF-80 BBS using a data/fax/phone switch.

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to: aq474@cleveland.freenet.edu or send BitNet Mail to: aq474%cleveland.freenet@cunyvm or send PRODIGY Mail to: DFJH48A or send a message via packet to KB8NW @ WA8BXN.OH.USA.NA

Hi Clark, can you imagine the fallout on here if Galgo had said:
``... a bunch of old black men who just don't get it'' or
brown men or yellow men or red men? Only then would he be accused
of being racist.

My advice to Galgo is to study your brains out and work your tail
off instead of feeling sorry for yourself. Only then will you
really `get it'.

I have two Motorola MTX-800 Trunked portable with key pad, two
system select and three subfleet select.
.
Accessories include:
Stubby Antenna
Desktop Charger

Thay are in good condition and are apx. ten years old with manuals
and proof of sale.
They sold for about $1500.00 new I'm asking $250.00 ea. or $400.00
for the pair FOB Hawaii. Can take M/C or Visa.

The reason I am selling them is I sold a business and no longer
have a use for them.

E'Mail for more inf.

Date: 1995-04-02 00:00:00 UTC
From: john.king@sol.pfalz.DE
Message-ID: <8A6A366.00650010A1.uuout@sol.pfalz.de>
Source record: 249427

I am looking for two Hams, KI0M and AK0X, married, who live in Bolder, Colorado. This is a second-hand request from DH8SBW, Ingolf Layher who is related to AK0X. Ingolf would like to come to the USA and visit his relatives. If you have *any* information, please write me via e-mail at

Internet: john.king@sol.pfalz.de
.or.
Packet: kb2srs @ db0ge.#sar.de.eu

Or, write Ingolf Layher, Packet Radio dh8sbw @ db0lx.#bw.de.eu

Thanks for any help!

John

Hi! My name is Heath and I am an amateur radio operator (N0ZCL). I recently sent out a request regarding information on CAPS / MARS, but didn't really get what I was looking for. I have a 2-meter mobile radio (Azden P7000H) which receives frequencies between 118 - 174 mhz. However, I am a certain that it could be modified to receive frequencies up to 999 mhz. I am reasonably certain of this because it will actually scan through those frequencies (which are technically out of its specified range), but will the display will blink on and off just before returning to a default frequency of 150 mhz.
I am interested in obtaining access to these frequencies for more complete receiving coverage, but not for any transmitting reasons. I have know interest whatsoever in transmitting on any frequencies other than 144 - 148 mhz. Anyway, if anyone could give me any help or advice in how to go about modifying my radio to receive these other frequencies (approx. 30-999 mhz) I would definitely appreciate your input. Or maybe you know somewhere I could write or call to get this information.
Thank you for your help in this situation,

73s--Heath - N0ZCL

The SUN, that large white thing in the sky:

AC3L purports that he can: "...predict[ing] band openings by observing the sun?"

He queries if anyone has: "read anything about such a condition."

I have heard of these conditions before. They are a precursor, the initial signs if you will, of insanity. If "luna"tics are out at night, then sun worshippers prey on the carcasses of dead dogs by daylight - they are K9 prayers. This form of dementia is classified as post traumatic sun disorder, or PTSD for short.

Remeber what Bruce Springsteen's Mom told him when he was a youth: "Never look into the sights of the sun." Take heed, AC3L, and get help.

155. Re: ARRL Membership

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-03 00:00:00 UTC
From: Peter Coffee AC6EN <72631.113@CompuServe.COM>
Message-ID: <3lpgv2$bo1$1@mhadg.production.compuserve.com>
Source record: 249231

If you have access to QST magazine through a club or a library, then perhaps ARRL membership is a dispensable luxury. Finding and joining a good local club is more important during your first year as a newly licensed ham, if that's a choice that has to be made one way or the other -- local clubs also have dues, and one should support one's "home" repeater as well.

ARRL ain't perfect, but it's there and it's a credible and well organized mechanism for representing us in D.C. -- where the whole political and economic basis for spectrum decisions is up for grabs in the next several years. If you want a recognizable ham radio hobby left to pursue in the 21st century, ARRL can sure use your support today. But in your case, becoming an active ham and recruiting others like yourself is at least as valuable a contribution.

Good luck with the new license.

156. Re: How much power is enough?

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-03 00:00:00 UTC
From: Peter Coffee AC6EN <72631.113@CompuServe.COM>
Message-ID: <3lphkc$bo1$2@mhadg.production.compuserve.com>
Source record: 249232

Yeah, it's always useful to remember that a whole 6 dB is only one S unit. From 600 watts to 60 watts is the difference between S9 and S7.3. On a metric of dollars per S unit, amplifiers are the expensive way to go. They say that time is money, but when it comes to making contacts timing is cheap compared to watts. Higher antenna gain, lower feedline loss, narrower receiver filters, and DSP audio filtering are also both less expensive and less likely to cause problems with neighbors -- and in the spirit of the regulations requiring us to use the minimum power that provides communication.

157. Voting circuit for a 2 meters repeater?

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-03 00:00:00 UTC
From: vaillan@ireq.hydro.qc.ca
Message-ID: <D6GLCr.DII@ireq.hydro.qc.ca>
Source record: 249233

Voting circuit for a 2 meters repeater?

We would like to add a second receiver to our 2 meters repeater.
Does anybody knows how to make a voting circuit to select
the best of the two received signals? This second receiver
would be at an other site and linked with the repeater controller
with a UHF link.

Does anybody use a DSP to analyze the two audio signals and
select the best one?

Thank you very much for your help.

158. Question about gateways Internet-Packet Radio

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-03 00:00:00 UTC
From: "Oleg.A.Chernozyomov" <victoria@rada1.saratov.su>
Message-ID: <ABg2xVlGH5@rada1.saratov.su>
Source record: 249340

Hello, All,

Neither I nor my friends here have no
Packet Radio capabilities, but we need sometimes to pass
some non-commercial short messages to fellow hams in other
cities and countries.

Please could anyone tell, whether there are any Amateur gateways to
transfer messages from Internet (or Eunet, etc)
to Packet Radio nets and vise versa.
If they are, it would be great!

Any reply on the matter would be appreciated,

Thank you,
Oleg Chernozyomov, UA4CIF

159. USCG HF CW QRT (Copied from Packet)

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-03 00:00:00 UTC
From: leigh@rain.org
Message-ID: <3lnf0l$8tp@news.rain.org>
Source record: 249341

Following is an interesting copy from packet, of the final transmissions in CW from the NMN USCG station. The sender of the bulletin is also a shipboard radio operator.

Question: what does "CAMSLANT" mean?

--Leigh/KM6JE.

57088 B# 2185 NEWS WB9AWX ALLUS 950401 Coast Guard Ends CW Ops.
Forwarding path: KM6RZ W8AKF K6VE

QRT

At about 0015 UTC April 1, 1995, NMN the U.S. Coast Guard station in Chesapeake, Virginia tapped out the end of its final message: "WHAT GOD HATH WROUGHT" signed it "CG CAMSLANT" and with a long "SK" gave the frequency over to static.

The U.S. Coast Guard had followed the example of all of the other services and ceased to use Morse Code. The U.S. NAVY had long ago given up CW in their communications. Everything is now sent by voice or digital modes.

In April 1993, the Coast Guard had ceased CW operations on medium wave frequencies (400-500 kHz). In June of that year they graduated their last class of commspecialists who were trained to use the code.

The use of CW by merchant ships has declined in recent years as it has for hams and the military. However, managers for shore stations KFS (San Francisco) and WLO (Mobile) report that the decline of CW has stopped. Both stations plan to continue offering CW service to those ships whose owners will not or cannot afford the additional expense of new computer equipment.

At 2300 UTC March 31st, the operator at NMN worked a few last ships. As operator on the SS LANE VICTORY (KECW), I checked in to give them one last 73's. The operator was sad and a little nervous as I imagine there were many watching him. The contact was smooth as any one of the hundreds of thousands the Coast Guard has handled over the years. Even though the crisp formality of commercial message handling was in the past, he still took the time to ask QRU? I had no message. I just wanted to say good bye.

I called once more just before midnight UTC. NMN came back with "JAY DE TIM HW?" and then the circuit went dead. It was time for the last message. It began:

"CQ CQ CQ DE NMN NMN .... "

DE JAY WB9AWX @ K6VE.#SOCA.CA

160. Re: Delayed Echo on 15 Meter CW?

From: leigh@rain.org
Message-ID: <3lnfd7$8tp@news.rain.org>
Source record: 249342

Gary, thanks for the information. But I don't understand how mulitipath could change the tone of CW to a raspy buzz. I've experienced multipath a few times on HF SSB, and did not observe the tone change.

Hi all

Someone reported that AJ7/JK2VOC had been operating below 7100khz
SSB during CQ WPX.

A friend of mine called JK2VOC the other night and got the answer
that he never been on 7MHz SSB from USA.
He knew that any JA reciprocal permit holders could not operate
on 7MHz SSB.

ANARTS meeting

The next meeting of the Australian National Amateur Radio
Teleprinter Society will be on Friday 7th April at 7.30 pm at
the QTH of Keith VK2ZZO. There are some important matters to
discuss so let's see some of the more silent members there...
We usually have cake with the coffee, too...

SPDX RTTY CONTEST

RUN BY POLISH RADIOVIDEOGRAPHY CLUB, HELD ON THE 4TH FULL
WEEKEND OF APRIL (22ND-23RD).

1. CONTEST PERIOD - 0000 UTC SATURDAY, THRU 2400 UTC SUNDAY.
SINGLE OP. ONLY 36 HOURS OF THE 48 HOUR CONTEST PERIOD ARE
PERMITTED.
2. BAND - 3.5 - 28 MHZ WITHOUT WARC BAND.
3. MODE - BAUDOT ONLY.
4. CLASSES - A. SINGLE OPERATOR, ALL BAND
B. MULTI OPERATOR, ALL BAND
C. SWL
D. SP STATIONS
5. MESSAGE - RST AND QSO NUMBER. POLISH STATION TRANSMITS RST

AND TWO LETTERS DENOTING THE PROVINCE.
6. QSO POINTS - COUNT 2 POINTS FOR QSO WITH YOUR OWN COUNTRY. COUNT 5 POINTS FOR QSO WITH OTHER COUNTRIES ON YOUR CONTINENT. COUNT 10 POINTS FOR QSO WITH COUNTRIES NOT ON YOUR CONTINENT.
7. MULTIPLIER - EACG DXCC COUNTRY COUNTS AS ONE MULIPLIER ON EACH BAND INCLUDING THE FIRST QSO WITH SP. EACH SP PROVINCE WILL BE COUNTED AS ONE ADDITIONAL MULTIPLIER ON BAND. EACH CONTINENT QSO COUNTS AS A MULTIPLIER (MAX. OF 6) OF ALL BANDS.
8. BONUS - SPECIAL SP STATIONS WITH SUFFIX RVG WILL BE -JOKER- IN MULTIPLIER (NEW COUNTRY OR CONTINENT).
9. FINAL SCORE - TOTAL QSO POINTS X TOTAL MULTIPLIERS (SUM OF COUNTRIES PLUS SUM OF PROVINCES) X NUMBER OF CONTINENTS WORKED (MAX. 6).

MORE NEXT WEEK

IPS WEEKLY REPORT
---

24 MARCH - 30 MARCH

DATE OF ISSUE: 31 MARCH 1995

INDICES:

DATE 24 25 26 27 28 29 30
10CM 95 92 90 89 84 81 80
A 6 6 20 16 12 19 (9 ESTIMATED)
T 54 54 36 -10 4 13 23

SOLAR ACTIVITY WAS VERY LOW 24TH TO 25TH, AND 27TH MARCH; AND LOW FOR THE REMAONDER OF THE WEEK.

THE GEOMAGNETIC FIELD AT LEARMONTH W.A. WAS QUIET TO UNSETTLED ON 24TH, QUIET ON 25TH, AND UNSETTLED, OR UNSETTLED TO ACTIVE 26TH TO 30 MARCH.

IONOSPHERIC F2 CRITICAL FREQUENCIES AT SYDNEY WERE ENHANCED BY 15 TO 30 PER CENT 24TH TO THE FIRST HALF OF THE UT DAY ON 26TH MARCH. FREQUENCIES THEN BECAME DEPRESSED TO 30 PER CENT, IMPROVING TO 20 PER CENT DEPRESSED EARLY THE NEXT DAY; THEREAFTER FREQUENCIES WERE MOSTLY NEAR PREDICTED MONTHLY VALUES. SPREAD F WAS OBSERVED THROUGHOUT THE DAY ON 27TH.

FORECAST (31 MARCH - 06 APRIL)

SOLAR: VERY LOW.

GEOMAGNETIC: ACTIVE LEVELS EXPECTED 1 APRIL, THEN QUIET TO UNSETTLED. ACTIVE LEVELS EXPECTED 7-9 APRIL.

IONOSPHERIC: DEGRADED CONDITIONS EXPECTED 1-2 APRIL, THEN
REMAINING NORMAL UNTIL 7 APRIL.

COURTESY OF THE IPS RADIO AND SPACE SERVICES

Society information

The Society may be contacted at : PO Box 860, Crows Nest 2065
Australia, for such matters as membership and general
enquiries. Enquiries can also be made by packet to the
President (Col) VK2CTD @ VK2XSB, or the Secretary (Pat) VK2JPA
@ VK2AAB.

News items may be sent to Broadcast Officer PO Box 60
Blacktown 2148 Australia, or by packet to VK2JPA at VK2AAB.
Email address for the Broadcast Officer is :

patl(at)pitt.conmusic.su.oz.au

News items may be sent to Broadcast Officer PO Box 60
Blacktown 2148 Australia, or by packet to VK2JPA @ VK2AAB.

Email address for the Broadcast Officer is :

patl(at)pitt.conmusic.su.oz.au

The Society welcomes news items on any digital subjects from anywhere in the broadcast coverage area. We are looking forward to news from your areas to let other amateurs know what you are doing in the hobby. Hope to hear from you.

73s de Pat VK2JPA Broadcast Officer
That concludes the ANARTS NEWS852 02/04/95....

Inserted by VK2BQS (Jim) Vice-President.

Postscript: Remember that the Society has an urgent need for volunteer relay officers, on one occasion last month we were reduced to one available transmitting channel during the day and one at 0930z due to absences of members and an equipment malfunction. As one of our group is moving to an area where Amateur Radio may well be a NO-NO, (at least at the level which we work), the situation could become even worse at times... The fact that the work is enjoyable and rewarding is borne out by the long terms which volunteers usually remain in service, ten years is not exceptional and the turnover has never been startling, but father time and mother nature are ganging up somewhat, so how about contacting the Broadcast Officer, or better still, the President VK2CTD. You will be made very very welcome. 73 all....J.S.

Those who get it, got it. You seem to have missed the boat. Try harder, it can actually be fun out there and quite challenging to keep up with the changing world of ham radio.

>Gandalf the Grey
>N3UPH

yes, i would think so...if nothing else but for the advertisers in the back of the magazine for reference. also there are articles that are good reading plus information about what's going on in amateur radio across the board - you might want to see if you can swing a year's membership to get a feel for what's in the package...

also i believe you have to be a member to use the dx outgoing bureau the arrl runs (i could be wrong on this, but it was like $2 per pound of cards and a current mailing label from a recent QST...)...

anyway, the membership is a deal even if you only treat it as a subscription to QST...

169. What range to expect from ATT 9100 900 MHz cordless phone?

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-03 00:00:00 UTC
From: bezenek@plains.NoDak.edu
Message-ID: <D6FoCy.HoL@ns1.nodak.edu>
Source record: 249351
Cross-posted to: sci.electronics,rec.radio.amateur.misc,rec.radio.scanner

I just bought an ATT 9100 (same as 9120, but without an intercom)
cordless phone. It is a 900 MHz model, with digitized sound.

I am only getting about 200 feet of range before I start getting
drop-outs, whether the path is line-of-sight or not. That is good,
because obsticals do not seem to matter, but I expected a little bit
better for line-of-site.

The manual does say that the phone is designed to be at the legal power
limit on 900 MHz. I assume that the limit is pretty small...

Should I be getting more than 200 ft? If not, has anyone done any mods
(elevated antenna on base, etc.) to get better range?

Thank you in advance,

Todd

In my experience as a VE (at least 5 yrs worth of giving monthly exam sessions), far more people pass a CW test on solid copy than pass it by answering 7 of 10 questions right. Of the people who pass our CW exams, probably only a third have answered that many questions right, and nearly all of those have solid copy as well. The other 2/3 of passing examinees FAIL the 7 of 10 but still manage to have 1 minute of solid copy. Not having given any multiple choice CW exams (and I never will!) I can't comment about whether or not those people make solid copy but I'm inclined to think it would be much easier to guess answers than on a fill-in-the-blank test.

re: HF Trader Nets
Brian,
One of the more popular trader nets is held on Friday
evening; winter @0000Z, and usually @2300Z during DST, on 3.898.
It used to be twice weekly (Mon & Fri), but recently changed to
Friday only. The Hoss Traders have a net on Sun (3.942) @2100
I believe, and on Wed. on 3.910 @0100. There is also a net on
Sat. morning on 3.985 and another on Sun. @1200 (1300Z?) on 7.265.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 03/2330Z APRIL 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 03 APRIL AND FORECAST FOR 04 APRIL - 06 APRIL

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 75/13

GOES satellite data for 02 Apr
Daily Proton Fluence >1 MeV: 8.9E+04
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 5.5E+06 (normal)
X-ray background: A1.5
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
04 Apr 05 Apr 06 Apr
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 04 Apr: 75/13

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet

Estimated Indices : A K Observed A Index 02 Apr
Learmonth 2 2111 0000
Fredericksburg 2 22
Planetary 5 18

Observed Kp for 02 Apr: 4524 4221
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
04 Apr 5 Quiet
05 Apr 12 Unsettled
06 Apr 15 Unsettled
COMMENT: Active conditions expected for interval 7-9 April, due to
coronal hole.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
03 Apr normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
04 Apr normal normal normal
05 Apr normal normal fair
06 Apr normal normal fair
COMMENT: Degraded HF comms are probable for high latitude circuits during interval 6-9 April. Mid latitudes can expect degraded conditions 7-9 April.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
03 Apr 32 enhanced by 15% early in UT day, then near predicted monthly values

Predicted Monthly T index for April: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
04 Apr 20 Near predicted monthly values
05 Apr 20 Near predicted monthly values
06 Apr 20 Near predicted monthly values
COMMENT: Degraded HF comms expected 7-9 April. Townsville and Hobart MUFs were near normal yesterday, some mild spread F was observed during local night at Hobart.

Hey Todd,
I have the Uniden (2) two line model. I can get in my van and ride two blocks away with mine. I was kidding and I told a friend of mine that I should replace my celfone with it.

I would seriously wonder if your phone is working right.

Maybe you should try swapping it out.

gud luck... DONDON

Cross-posted to: aus.radio,rec.radio.amateur.misc,rec.radio.amateur.digital.misc

AUSTRALIAN NATIONAL AMATEUR RADIO TELEPRINTER SOCIETY

For information of all potential contestants and the Editors
of all appropriate publications. These rules may be
published at the discretion of all readers.

A.N.A.R.T.S. To be held on the week-end of
10th-11th JUNE. 1995.
WW RTTY CONTEST
Australian National Amateur
Radio Teleprinter Society.
RULES P.O. Box 860, CROWS NEST, NSW 2065.
==========

These Rules are distributed to cover the 1995 ANARTS WW RTTY CONTEST.

TEST PERIOD: Contest takes place on the second full week-end of June in
each year. Contests start 0000 UTC Saturday and end 0000 UTC Monday.
The 1995 contest is to be held 10-11th June.

Not more than 30 hours of operating is permitted for Single Op. Stations
Non operating periods can be taken at any time during the contest.

Multi Op. Stations may operate the entire contest period.

Summary of operating times must be submitted with each contest log.

BANDS: Use Amateur bands 80, 40, 20, 15 and 10 metres.

MODES: All digital modes permitted (RTTY,AMTOR,FEC,PKT,PACTOR)
NOTE: No satellite operation permitted.

CLASSIFICATIONS: (A) SINGLE OPERATOR (One transmitter)

(B) MULTI-OPERATOR (One transmitter)

(C) SWLs

MESSAGES: To consist of RST, TIME (UTC), and (CQ) ZONE.

SCORING: For each band used - As per Exchange Points Table to obtain
QSO Points. (This Table was revised 1994 and is so marked).
Count Countries worked (see definition)

Total all bands used to obtain (1) Total QSO Points.
" " " " " " (2) Total Countries.

World stations calculate "VK BONUS" which is 100 points for each VK worked on 14MHz; 200 points for each VK worked on 21MHz; 300 points for each VK worked on 28Mhz; 400 points for each VK worked on 7MHz and 500 points for each VK worked on 3.5MHz.

CLAIMED SCORE for WORLD STATIONS is calculated by multiplying (1) TOTAL QSO POINTS by (2) TOTAL COUNTRIES then THAT TOTAL by (3) the NUMBER OF CONTINENTS WORKED during the contest.(Note that each continent counts once only to a maximum of 6). To the total obtained ADD the "VK BONUS" to show GRAND TOTAL CLAIMED SCORE.

Example for World Station: 720 points from zone chart (1) X 29 countries (2) = 20,890 X 5 continents (3) = 104,400 pts plus(+) 6 VK stations worked on 14MHz (that is 600 points) giving a grand total of 105,000 points.

CLAIMED SCORE for AUSTRALIAN STATIONS (VK1-VK8) is calculated by multipying (1) TOTAL QSO POINTS by (2) TOTAL COUNTRIES and then that total by (3) the NUMBER OF CONTINENTS WORKED during the contest with a maximum of six as stated above. This calculation gives the GRAND TOTAL CLAIMED SCORE.

In all cases, a station may only be worked once per band, but may be worked on other bands for QSO points and multipliers.

COUNTRIES: The country count is as per ARRL DXCC list of countries, except that Australia (Areas 1-8), Canada, Japan, and U.S.A. mainland DO NOT count as separate countries. HOWEVER, each call area VK1-VK8, and each call area in Canada, Japan and mainland U.S.A. DO COUNT AS SEPARATE COUNTRIES.
Contact with ones own country does count for QSO points but does NOT COUNT AS A MULTIPLIER. (NOTE that call areas VK1-8, and in Canada, Japan and USA mainland count as countries).

LOGS: Logs must show in this order:
1. DATE
2. TIME (UTC)
3. CALLSIGN OF STATION WORKED/HEARD
4. MESSAGE INFORMATION SENT/RECEIVED (RST/TIME/ZONE)
5. POINTS CLAIMED.

SUMMARY REPORT: Summary sheet must show: Callsign of station, name and address of operator, bands used (a separate log is required for each band), the points claimed for each band, the number of countries worked on each band, the number of continents worked; and details of VK BONUS calculations for world stations. A summary of the calculations made to obtain the GRAND TOTAL CLAIMED SCORE as per the "Scoring" section will assist checking. The general certification regarding compliance with rules and signature of operator is also required.

Multi-op logs must contain signatures and callsigns of each
operator.

AWARDS: Plaques will be awarded for first place in each Classification.
Certificates will be given to 1st, 2nd, 3rd places in World and also on
a country basis (see above). The judges decisions will be final and no
correspondence will be entered into. Logs become the property of ANARTS

CLOSING DATE: Logs must be received by the Contest Manager, A.N.A.R.T.S
P.O. Box 93, TOONGABBIE, NSW 2146, AUSTRALIA, by 1st September of
the year of the contest.

Note that corrected Exchange Points Tables can be obtained from the Contest
Manager (SASE or similar appreciated) and that the Guide to RTTY Contests
published by N6GG and used by many of the Stateside magazines contains
correct versions of the Table. If in doubt, we can do the scoring for you
but it makes for a lot of work.

Please allow plenty of time for your log to reach the Contest Manager,
last year we had logs, mainly from eastern Europe but also one from South
America which took nearly six months to make the journey, by which time the
results had been determined and published.

73 es Good Luck to All. ANARTS...

The Society will be very appreciative of any circulation of the above
Rules carried out by recipients of this message. Amateurs in any areas
could canvass their local organisations to ensure good coverage.

Silent keys

Silent keys

Advice has been received by the Divisional Office of the passing of two amatuers. Unfortunately no onformation other than hteir names & callsigns was submitted. If any listeners (or readers) has any further information regarding either of these people we would be pleased to provide details on the next broadcast ...

In the meantime... we regret to announce the passing of

Mr. A. G. Yates VK2ZP (sometime in February)
and
Mr. J. L. Grey VK2AKO (on 14th March last)

Federal news

CABLE TV - QUESTIONS OVER EMC

The roll-out of cable television around Australia is well under way.

By the end of January, the Telstra Pay TV cable network had passed 100,000 homes Australia-wide, reaching its 50,000th home in Sydney alone in mid-February. Telstra (the operator of Telecom Australia) is on target to reach 400,000 homes mid-year and plans to pass one million homes each year from the end of this year.

They have been laying aluminium `hard line' cable under the streets since June last year. Philips Electronics Australia has been supplying Telstra with cable imported from Times Fibre of the US.

In October last year, Telstra began a doubling of their roll-out and expects to reach 400,000 homes by mid-year, and plans to pass one million homes each year from the end of this year for the next four years.

Now, Optus Vision has joined the cable Pay TV bandwagon, having resolved its differences with the Minister for Communications, Michael Lee, over the issue of monopolising access which brought their plans to a halt late last year.

Optus began installing `hybrid' cable - comprising aluminium hardline coax and optical fibre _ in Sydney's western suburbs in late February, slinging the cable between streetside power poles.

The optical fibre part of the cable is to be for Optus' subscriber telephone system to compete with Telecom's.

In an agreement announced late in January, Melbourne cable manufacturer, Olex Cables, part of the Pacific Dunlop group, will establish a factory in Tottenham to make hardline coax for both cable TV carriers.

Electronics giant, Philips Electronics Australia, has said they are preparing business plans for local manufacture of other key items, including the underground amplifiers which are distributed along the cable. These have been imported up to now.

The cable pay TV system employs radiofrequency transmission down the coax, between the service providers and the subscribers in their homes. However, the specifications for the cable transmission systems are not yet settled, according to an Austel spokesman.

Each supplier will likely have different transmission systems, although Austel are favouring `open' standards to avoid system monopolies.

One proposed system employs two spectrum segments: 5-65 MHz, for encoding and subscriber control, and 85-550 MHz, for the television channel transmissions themselves. A higher UHF band is `reserved' for future multimedia interactive systems.

The free-to-air television services don't want their channels used on cable systems and the Federation of Australian Commercial Television Stations (FACTS) have proposed that cable service providers use spectrum in the 230-520 MHz and 820-950 MHz ranges.

There is some confusion over standards at present and an Austel committee is working towards developing a set of standards, but they're a moving target, Austel's spokesman said, and, while Australia is basically modelling its approach on European standards, we're breaking fresh ground.

Settling of standards is unlikely to occur within 12 months, but that may be accelerated in the future depending on prevailing circumstances within the industry.

Clearly, there's potential for electromagnetic compatibility problems between cable TV installations and amateur radio operation.

The potential for amateur transmissions to possibly interfere with cable installations - either streetside equipment, set-top equipment in subscribers' homes or to the link from streetside to set-top - is at present unknown.

Likewise, the potential for interference to amateur radio receivers from the subscriber `back channel' is unknown, and where and how problems might arise.

Austel's spokesman said EMC considerations are to play a big part in pay TV standards and Austel is wanting to have an urgent look at that as there a gap there at present.

The WIA is monitoring the situation and is to seek input on the EMC question to the relevant organisations.

WIA News for April 1995 From the WIA Media Liaison Officer Roger Harrison VK2ZRH Released 10 March, 1995

Div. solicitors' letter

"That"...court case

The following letter has been received by the "President" from the Divisional solicitor Lewarne & Goldsmith of Parramatta
and I quote ...

Mr. M. Corbin
80 Lalor Road
Quakers Hill 2763

Dear Sir,

Re: The Wireless Institute of Australia
New South Wales Division

We refer to your telephone conversation with the writer earlier today and confirm that your application in the above matter is to be heard at 9.30 a.m. on 21st April 1995.

We further confirm Counsel's advice that you inform all members of the Institute of the time and date by way of a broadcast. Please keep a transcript of the Broadcast so that we can annex it to an Affidavit of Notification which the writer shall prepare before 21st April.

Yours faithfully
Lewarne & Goldsmith

VK2 PRESIDENT'S MESSAGE

This is Michael Corbin, VK2PFQ.

An approach has been made this week through government circles, to this Division to prepare a submission for the government, concerning all facets of Amateur Radio. This would include things like fees....their ultimate cost......This might range anywhere from $51.00 to zero dollars per annum. Apparatus licensing...... It's been said many many times that amateurs never ever really fitted into this category. In fact the offer is ANY..... Yes ANY matter covered by Amateur Radio activity. Any subject that anyone wants to discuss can and will be discussed. What the Government is seeking are logical reasoned arguments set out so that they can be understood by everyone. The Government recognises the role played by Amateur Radio operators ..... This needs to be "sold" to the

public as well as being acceptable to the Industry. The Government is asking us to help them show the Public this is no "Special Deal"..... It's something that should be done.

The undertaking given is that there is to be full and frank discussions.From their point of view there will be no starting place. Amateurs will determine that; there will be no agenda.... amateurs will determine that....there will be no preconceived ideas.... everything is on the table for discussion. The only qualification from the Government's point of view, is that the submission from the Institute should be a "CONSENSUS VIEW" not that of one or two people. To this end ALL AMATEURS must be invited to have their say and once they have ... They must agree with the conclusions reached..... Obviously everyone won't agree. We don't expect to achieve that.

After the decrease from $71 to $51, the Government thought that all opposition would cease (more of that later) to the contrary..... your letters kept rolling in. The Government by now is completely confused. They have indicated to me that they have received advice on how to fix absolutely everything associated with Amateur Radio. There has been literally hundreds of ways suggested as to the method, scale, collection and administration of fees; organisation and allocation of the spectrum; application of apparatus licensing to amateur radio; suggestions as to how it might fit, together with statements that it should not have been there in the first place etc etc etc. Not surprisingly they are a little confused as to which suggestions have merit and which do not. They are after all, and I don't mean this in a derogatory sense, only Politicians with no expertise in Amateur Radio. The logical approach then must be, to have someone put these submissions into some sort of order and that once they are sorted out, they are the opinion of all amateurs all over Australia. To this end, I have written to the Federal President, Mr. Penfold, expressing the views put to me by the Government. I have to date received NO answer. Unfortunately I have seen a sling off at my letter to him on Packet Radio by VK2XBR. I wonder how this person got a copy of personal correspondence, which was sent to the Federal President. Come on Julius....This submission will be of benefit to all Amateurs....Even you!!

This week I will be writing to all Divisional Presidents seeking their co-operation in writing this submission. Anyone who has something to say. We want to hear about it. Don't bother re-writing your submission, send a copy as it is. This information can be sent to one of several addresses..... PO BOX 1066 PARRAMATTA NSW 2124 to PO BOX 81 Quakers Hill NSW 2763....by Fax to (02) 633 1525 or (02) 626 6066. Receipt of all information will be acknowledged.

Next week a committee will meet to discuss the terms of reference of this enquiry. If you feel that you would be of a direct benefit to this Committee typing, sorting whatever....give me a

call on 6269288 whenever you have the time. It is anticipated that such an enquiry will have the proportions of almost a Royal Commission. I cannot stress strongly enough..... WE NEED INPUT ON ALL SUBJECTS FROM ALL AMATEURS.... All contributions will be acknowledged in the submission, no matter how small. Whilst the document itself will be quite voluminous, the findings will be short, sweet and to the point. Supporting documentation will be contained in the many appendii.

Overseas amateur organisations will be contacted and information sought on the way in which other countries administer their amateur radio licensing. To this end I urge anyone who is a member of an overseas amateur club, to please write to them and obtain this information. Our Pieter Kloppenberg, VK2CPK is a member of the Dutch Organisation and he intends writing to them to obtain the necessary facts. I would appreciate anyone in like circumstances to contact this Division and advise us of any club in which you may have some influence.

I appeal to everyone for information. I stress.... This Division only wants to facilitate the preparation of this document. The finished article must be the work of everyone.

I will now read a copy of a letter written by Mr.Penfold to Paul Elliott M.P., member for Parramatta.

I will make no comment on its contents. I will add that this letter has been sent to me by a Politician. He said that it was the Institutes' reply to the $51.00 fee - perhaps that's what prompted the enquiry by the Government to us in the first place.... This N.S.W. Divisional office had not seen a copy of this letter, the Federal Councillors have not seen a copy of this letter, the Federal Office has not seen a copy of this letter......draw your own conclusions.

WIRELESS INSTITUTE OF AUSTRALIA

FAX Date 10/3/1995

To: The Hon. Paul Elliott Ph:(06)277 4387 Fax:(06)277 8549

From: Neil Penfold, WIA Federal President
Ph:(09)409 9333 Fax:(09)409 9333

No. of pages, including this one: 1

Dear Mr. Elliott,

I wish to thank you, on behalf of the WIA, for providing the opportunity last Monday, March 6th, for our Vice-Chairman, Roger Harrison, and International Study Group Coordinator, Dr. David Wardlaw, to discuss with you the Amateur Radio fraternity's concerns over licensing and licence fees.

Your advice to us on March 8th, and subsequent announcement in the House, that after further consultation with the SMA, fees would be $51 for all licence grades is a positive change and a welcome first step in resolving the whole issue of Amateur Radio licensing.

In addition, I must say that your recognition of the value of the Amateur Radio Service to the community is greatly appreciated, as you gave particular recognition to the aspect of training young people in communications technology as well as Amateurs providing communications links in emergencies. Such recognition from government for the Amateur Radio Service has never previously been achieved since the WIA was founded in 1910 (the world's first national Amateur Radio Society).

The WIA also appreciates your invitation to put a submission to you on the matter of Amateur Radio Service licensing and we will take up that opportunity in due course.

Since your announcement, the Spectrum Manager, Christine Goode, has written to me with advice on the new fee structure and suggested a meeting, which I requested in previous correspondence to her. We will meet at the earliest opportunity that can be arranged.

In closing, on behalf of the WIA and the Radio Amateurs of Australia, I would like to thank you again for your consideration in listening to the concerns of the Amateur Radio fraternity and for providing significant recognition of the valuable services provided by Amateurs to the community.

Yours Sincerely,

Signed Neil Penfold VK6NE
WIA Federal President.

SEE YOU NEXT WEEK!!

VK2 April-May BC roster

April to June Broadcast Roster

The April to June roster was posted last Tuesday.

All broadcast team members should have already received their copy. If anyone has not yet received it, please call Steve VK2QZ as soon as possible.

If anyone listening would like to join the Broadcast Team please contact the Parramatta office on 689-2417 or Steve VK2QZ (QTHR).

No special skills are required, nor is an amateur licence, al-
though we are in need of a few more full-call amateurs and people with good 'news-reading' voices.

--Steve Pullen VK2QZ, Broadcast Roster Co-ordinator

VK2 WICEN News

VK2 WICEN News (2 Apr 1995)

All WICEN members who have not renewed by now are unfinancial; it would be a good idea if you paid your subscriptions before the AGM in July. In the meantime, it appears that Amateur licence fees are set to rise some time this month, so if you haven't already written to your Senator then please do so now.

This weekend is the VRA Mid-Year Conference at Wooli, presided over by Ray Gill VK2BRF, the VRA President (who also happens to be a prominent WICEN member). This is followed by the Forster Triathlon next Sunday, and it is commanded by Michael VK2CMW and Darryl VK2DAZ. The Hunter region meet on 17th April, and the Hunter Anzac March, commanded by John VK2JRC is on 25th April. Finally, the Oberon Car Rally is on 29th April, with about 20 people required; please contact Alan VK2YYJ via packet radio at VK2CZR, or at work on (02) 839-1388.

Looking ahead next month, there is the Hawkesbury Bridge to Bridge Speedboat Race on 7th May, for which David VK2KLX is looking for volunteers; the annual Goulburn Training Seminar is on the weekend of 13-14th May, along with the Rathmines Fun Run co-ordinated by Steve VK2KBL; the Wyong Car Rally is on the weekend of 20th-21st May, co-ordinated by David VK2UDT and Andy VK2XRX; and the Variety Club of Australia Newcastle Bash is on 23rd-26th May, with Maurie VK2CD in charge.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Blue Mountains on the first Monday of each month at 8.30pm on channel 7175 simplex, Hunter each Wednesday at 7.30pm on channel 6900, Northern Rivers each Wednesday at 8pm around 3610 kHz, Central Coast each Thursday at 8.30pm on channel 7125, and Sydney each Thursday at 9.30pm on channels 7150/8275. If there are any other regular nets then we'd like to hear about them.

-- Dave VK2KFU, WICEN (NSW) Inc. Publicity Officer

Help wanted

Help wanted

I am looking for someone to help me do some work on my HF antenna. It needs tuning and the elements tightened again. Also the cork brakes on the rotator need replacing.

I am a quadriplegic and unable to do any of this work.

If anyone can assist could they contact the W.I.A.

I can be contacted on 749-2332 AH or 646-2711 BH.

from Mark Gorski VK2NMG

Club news: Hornsby

HADARC : Hornsby and Districts Amateur Radio Club (Inc.)

We are inviting who are interested in ELECTRONICS - AMATEUR RADIO - COMMUNICATIONS and related fields to join our Club. Enjoy friendship and gain a very useful knowledge about the electronic age.

Meetings are held on the fourth Tuesday of each month at the Mt. Colah Community Centre, Pierre Close Mt. Colah commencing at 8.00 pm. At these meetings, a talk is given on radio, communications or a related subject. In addition to the monthly meeting, a workshop is held on the second Tuesday of each month (currently at the Mt. Colah Community Centre Pierre Close Mt. Colah at 8.00 pm). Visitors are most welcome.

The Club holds a "Net" each Monday evening (8.00-9.00 pm) on the Club's repeater, VK2RNS, on 147.250 MHz. All amateurs are welcome to join this net.

The Club conducts training classes and holds examinations for the Amateur Operator's Certificate of Proficiency (a prerequisite for holding an amateur station licence). These classes enjoy a very good success rate for training operators for their certificate.

For further information, contact the Club Publicity Officer:
Raymond Tooby
(02) 489 3357
or write to the Club at: PO Box 362, Hornsby NSW 2077

****

HADARC : Hornsby and Districts Amateur Radio Club (Inc.)

We are inviting who are interested in ELECTRONICS - AMATEUR RADIO - COMMUNICATIONS and related fields who would like to learn more and gain their Amateur Radio Licence to contact the Club.

The Club holds weekly classes which will commence in the new year and run for approximately 40 weeks. Examinations are held towards the end of the year, a successful completion of the course and pass in the examination enables you to gain an Amateur Radio Operator's Certficate of Proficiency abd a radio station licence.

The corse is conducted by fully qualified instructors.

The fees are most modest and the knowledge gained is very useful in every day life. Enjoy the class, the Club friendship and the opportunity to make friends all over the world.

The course is open to all persons of any age, both male and female of all nationalities and those who are disabled. The classes have been very successful in qualifying operators.

For further information, contact the Club Publicity Officer:
Raymond Tooby
(02) 489 3357
or write to the Club at: PO Box 362, Hornsby NSW 2077

Club news: Blue Mountains

Jo Harris, the WIA Historian is the guest speaker at the next meeting of the Blue Mountains Amateur Radio Club.

Jo is coming to speak to us about the history of the club's callsign, VK2HZ. We are also hoping to persuade her to talk about her "pet" subject, the first CW message sent from the UK to Australia in 1918 and her group's annual celebration of this event on the 22nd September.

Come along and meet Jo, you might get a chance to ask her about the history of your call.

All are welcome to the Blue Mountains Amateur Radio Club. The meeting commences at 8.00pm on Friday, 7th April, 1995 in the club room at Springwood High School, corner Chapman Parade and Grose Road, Faulconbridge; enter from Chapman Parade.

You don't have to be an amateur! If you have an interest in radio or its history - come and meet Jo and us.

The usual coffee, tea and scones will be served.

Publicity Officer, Alex, VK2ICL

COMING EVENTS

Now, a summary of upcoming events of interest to members and other Radio Amateurs and Shortwave Listeners...

Send in specific examples of how you or your club have used, or are using, Amateur Radio to benefit the community . . . Now!

Radio Old Timers Club net and callbacks . . . . . Monday
St George ARS meeting . . . . . Wednesday
Hunter Branch Radio Group meeting . . . . . Friday
Forster Triathlon (Michael VK2CMW & Darryl VK2DAZ) . . . . Sunday
Summerland ARC exams . . . . . Sunday
Liverpool & District Amateur Radio Club meeting . . . . 12 April
46th Annual Urunga Radio Convention . . . . . .15-16 April
Easter Monday public holiday . . . . . 17 April
Hunter WICEN meeting (Pauline VK2GTB) . . . . . 17 April
Deadline for comment on SMA paper "A New Outlook" . . . 21 April
Division's court application for AGM and fresh election 21 April
VK2 Divisional Council meeting . . . . . 21 April
International Marconi Day . . . . . 22 April
ANZAC Day . . . . . 25 April

If you have an event you'd like publicised on the weekly broadcast, then please send details to the Divisional Broadcast Officer, Michael Corbin VK2PFQ, by phone on (02) 626-9288, by fax on (02) 626-6066, or on packet to VK2SKY @ VK2AAB.

Items can also be forwarded to the Divisional Office before close of business on the Friday before the broadcast.

wnewkirk@iu.net wrote:
: >joejarre@netcom.com (Joe Jarrett) writes:
: >Horrors? I don't remeber any horrors. Few repeater coordinators OR
: >repeater trustees were happy to see the WR calls go away.

: well, once the system had settled down and some of the onerous details
: were smoothed over, it became tolerable.

: go look at what was required of repeaters in their filing for a license at
: the beginning of the 18803 era...those folks erecting systems had a lot
: of hoops to jump through.

Somewhere around here I have a 3/4 inch stack of paper that was a copy of
of one of those applications. I did one and got it licensed I
think it was WR5AIT but may have it confused with another repeater. I
don't think anyone wants to go back to those days. As I recall, after a
while, the FCC dropped the requirement for all that paperwork (you had to
be able to produce it with in some period of time if asked by the FCC) and
a simple 610 was adequate to get the WR' license.

Given the elimination of the paperwork, I think repeaters SHOULD have
their own licenses, and YES, a copy of the license SHOULD be part of
the application for a repeater coordination.

Just my opinion . . .

Does anybody know of any repeaters that are in the Centeral New Jersey
or Twin Cities of Minneapolis and St. Paul? I just Purchased a IC-12GAT
at a ham fest and so far all I have been able to do is ID on the 1292.00
(N2EZZ) Machine on the top of the World Trade Center.

Here is the list I have, and I have been told that many of these do not exsist.
Can anyone confirm the exsistance of any of these?

TSARC 1283.000 -
1291.600 1271.600
1260.000 1240.000

Middlesex County

South River 1291.200 1271.200

Morris County

Parsippany 1287.500 -

Union County

Cranford 1282.400 -
Elizabeth 1284.700
1287.000

New York

I have only test Manhattan

1282.800 -
1292.000 1272.000 (the only repeater that I have hit)
1292.200 1272.200

Minnesota

NONE??????

Also if you know if pl's have been added to any of these repaters (any they
are open) please post it here.

Thanks

Stu

Round the world "long path" propagation is pretty common on 15 meters.
I think it might interfere with the short path so as to give some noisy
modulation to the signal. 73 and GL Gerry K8EF@W8CQK.OH.USA.NA

184. Re: ARRL Membership

Newsgroup: rec.radio.amateur.misc

Source record: 249366

The fact that Mr Deutschmann is able to transmit on the amateur bands
at all is totally the result of ARRL efforts. Hams would never have
gotten their frequencies back after World War I had it not been for
active and continuous pressure from the League.

Regarding the League publications, I find them to be unusually error-
free, and they cost about one-third to one-fifth of comparable text
books in the industry. Deutschmann is entitled to his opinion, but in
this case, I think he is dead wrong. While the League isn't perfect,
it is the best thing that has ever happened to Amateur Radio.

Maybe you're missing the point entirely; haven't you ever heard someone
say "that's awfully white of you" or somesuch?

This phrase is often used to refer to narrow minded thinking, resulting
from either being naive or bigoted. Saying "a bunch of old white men"
in this context, as much as I can figure, seems to be talking about
older, narrow minded people.

>My advice to Galgo is to study your brains out and work your tail
>off instead of feeling sorry for yourself. Only then will you
>really `get it'.

Hmmmm.... is this a quite from Stalin or Mao?

>a few times on HF SSB, and did not observe the tone change.

Normal HF multipath has a period measured in seconds, but if
the path is passing through the fringe of an E cloud, you can get
very rapid changes between E and F propagation, enough to make an
audible tone. The reason it's raspy is that the atmospheric path
lengths are changing rapidly and randomly, IE you could consider
it a noise modulation.

The same thing is often heard on VHF auroral circuits. The aurora
changes rapidly enough to produce audible effects on the signal.
It's usually described as "watery or wavery", but under some
conditions it can rightfully be called a raspy buzz. It's often
bad enough that voice comms are very difficult and even CW is
hard to copy.

Obviously, you only get these types of effects when the path
is underdense and patchy, and is overlaid with another ionospheric
layer also capable of refracting the signal to your location.
I don't recall ever hearing this effect below 10 meters or when
one of the layers is solidly overdense.

>Ron Klein - W0OSK

Ron, it's true. They also sent it on 5870 kHz, and I copied the entire text. It was a very well-composed, but poignant, farewell to CW operations by the USCG. I hope that someone will post the entire text, it's a nice piece of work. Kind of sad, to be sure, but life goes on and technology must progress. I know that may sound like I don't care that CW is dying out, but in fact I care very much; however, I'm also a realist, and the reality of life is that as Man progresses older skills fall by the wayside.

Those of us who love CW have our charter, however; help create an historical environment which ensures that the radio telegrapher will never be forgotten.

"CAMSLANT" is a Naval acronym which stands for "Communications
Area Master Station AtLANTic" and hs been in use by the U.S. Navy
and USCG for a very long time. In the Navy we often shortened the
local one to just "CAMS". A CAMS has responsibility for all Naval
communications in a specific area, including frequency coordination,
coordination of fleet broadcast services, etc. I'm sure that USCG
CAMS have the same mission.

How would this be different from a fox transmitter for a fox hunt? The operator would probably allways be present when operating and could take overt action to prevent interference or correct circuit failure in the transmit mode.

I like the idea for a voice circuit. Anyone out there built one of these? How much does it cost? The CW circuit should be pretty easy to build and get running. How hard are the voice chips to work with? The voice interface would sure be easyer to program than the CW version. A timer/busy detect circuit should be pretty easy also. Could even use a microcontroller to do the timing and transmit control. Maybe the circuit could offer CW and a line for controlling a voice chip as an upgrade.

And a small correction to Jay's packet message: The last
sentence in the CG transmission was "What Hath God Wrought" and
not "What God Hath Wrought." The significance of that phrase is
that it was the first telegraph message sent by Samuel F.B. Morse
from Baltimore to Washington when the telegraph was demonstrated
in the 1830's or 1840's (not sure of the decade).

Many replies have given many good reasons for joining the ARRL, and I
heartily endorse all of them. I would add another:

As a new ham and as a teenager, the ARRL needs you. This organization,
which has, in fact, done much good for amateur radio, and of which
I am proud to be a member, needs the support of and the participation
by, new, young hams.

Please join the League. Please participate actively as a member.
Please vote in League elections. By doing so, you will help insure
the future of the League and of amateur radio.

>
>Holy cow (what ever that means), Brian! What a dream come true if
>the 40M broadcasters switched to SSB. You should get on 40M at night
>- then you'd realize why the ARRL is suggesting this.

I don't think you have thought through all the implications of
having the broadcasters go to SSB, Jeff. For one thing, it will
immediately double the number of channels available for broadcasting.
So now that AM signal that never bothered you before has a twin
brother from another area that creams you completely, IE where
6 kHz was somewhat protected by the innocous broadcaster before,
you've now got 3 kHz of that bandwidth hammered by a louder
competitor with better propagation to your location.

There's another factor to be considered as well. An AM signal
puts 50% of its power in the carrier, and only 25% in each of
the sidebands. The carrier is easily notched or avoided, and
isn't much of a nuisance. But when they convert to SSB, the
broadcasters will be able to put 100% of their power into the
sideband. You can bet your booties that they won't throttle
back to one quarter power when the change is made. So now
you'll have sidebands 4 times stronger than before, and they
aren't easily notched like a carrier is.

Having the broadcasters convert to SSB is likely to make matters
worse, not better, over the entire band.

Don't the packet stations on 145.01 and 144.91 hammer you pretty good
when you're close to town, even though you're 10kHz off?

Or maybe it just ups the number of retries for the packet users......

In a nutshell,

I personally think that all braodcasting should be stopped on the amateur bands. It won't be long before all we are is substandard Pirate radio! Nothing but code practice and "call in shows". Why do we need a call in show? if you have a net, you can just CHECK IN for free. Why give Ma Bell a chunk? All of the things that are being done by amateur broadcasting these days (code practice, news, ect) can be done on a net level or on a VHF level. The time for HF broadcasting has come and gone.
At least that's how I see it!
Free up the freq for a QSO....

Mark,

The September 1994 and March 1995 issues of QST covered this pretty well. I notice you are a brand new ham. Please email me with your mailing address, I will send you a copy of the articles (plus an ARRL Membership application :-)).

Hi there fellow hams... I am pondering about purchasing a mic unit. I have tried the throat mics and wasn't too impressed but they do work... I have HEARD about these ear-mic that pick up the air vibrations in your ear and then the regular head sets. What other ways are there to tx (besides speaker-mics and into the radio itself...) I do a lot of skiing and want to be able to ride a bicycle and etc. while still tx'ing. I think I heard that the ear-mic is NOT vox??? The troat mic is and the headsets are obviously voxable. I would rather stay away from ptt's but I can stick with them. I guest I would like to know your expiriences and comments if any, and any other mic that are out there.

Help?
KB7OYI

---snip---

I just assisted a friend installing a KW TM-742 in a 1994 Camry. Due to the "tight" dash arrangement, we decided to split the control head from the radio. The controls are mounted to the front of the ashtray (ashtray is still usable) and the radio is mounted on the drivers side wheel-well in the trunk. The cables run under the dash and then down the drivers side under the trim along with the other factory cables. I believe the ECM and cabling is on the passenger side. The power cables are run direct to the battery (fuses in both leads :-)), then through a hole we drilled where the clutch pedal would be (it's an automatic), and then down the drivers side with the other cables. The antenna is a Larson dual-band glass mount on the rear window and is connected to the radio via a diplexor. We ran
the cable for the speakers, and connected a Radio Shack mobile speaker, but it is not mounted
as yet. So far the installation works fine with no reports of abnormal windshield wiper/engin
cruise control operation.

Before we started, we called Toyota and had them FAX the installation reccommendations to us.
Not much there, just keep the cables as far away from the ECM as possible, crossing factory wiring at right angles, and be sure the SWR is low.

Hope this helps...

IW>I would like to hear from other HF2V owners.

IW>60 mph freestanding wind rating seems marginal to me. I get occasional icin
IW>in winter, and summer storms sometimes have 70 mph wind gusts.

IW>Should I guy the antenna?

IW>Would 12 ft. top-loading wires noticeably improve 80m signal reports?

IW>Would the top-loading wires function satisfactorily as guy wires?

IW>Anyone want to help me bury 600 feet of radial wires? (just kidding)

IW> 73 de Wayne Estes WD5FFH wayne@csg.mot.com

The Butternut HF2V does need guying ! It is like a stalk of grain in
the wind and will whip to an fro without guying. I have used 150
pound monafilament line to guy my antenna. It is connected to the
antenna at a point about 2/3 ways up the antenna. I used 3 guys. My
experience without the guys was that the 15 meter wire would fatigue
with the excess whipping and break off after a short time. I live in
Hawaii where we usually have 15-20 mph trade winds.

Han Ko wrote:

> I have a question on HAM Radio... could it be a good communication tool for a
> person in Korea and in Boston? Would it work over 90% of time?

It would work, but probably not 90% of the time. Propagation between Asia and eastern North America would be spotty at best, especially considering that we are at the bottom of the 11-year sunspot cycle, resulting in poor radio propagation. Just to try the Boston - Korea link, you'd have to buy at least $2,000 worth of equipment, and possibly much more; you could easily spend $10,000 setting up that link.

Ham radio is intended primarily as a hobby and experimentation medium, not as a means of routine communications. It's also limited to non-business communications. If you're interested in ham radio as a hobby, that's great. But if you just want to talk from Korea to Boston, you'd probably be lots better off just shopping around for a good deal on international long distance phone service. Good luck.

CAP using ham frequencies for SAR activities would be a grave mistake.
The FCC has supported the rights of repeater owners to govern who may
use the repeater. Repeater custodians could change CTCSS or take the
machine down for maintenance at very inopportune times. The CAP has
at least two dedicated repeater frequencies. I hope those in CAP
recognize that they are welcome to communicate on amateur frequencies
as amateur operators but the use of amateur frequencies for CAP
business may be considered by many as an abuse of power. Amateur
frequencies are not as protected from interferrence as government
frequencies.

The opinion above is strictly my own,
N0USP, former CAP Squadron Commander

Hey Roy,
I just knew someone would "capture" the "gained" power of those
wonderful antenna's...

It is with no small regret that again QST publishes and Editorializes
great cautionary notes about standing in "front" of those great gain
antenna's. Someone needs to that editor a clue about power density.

May I please have your permission to point my solar panels at the sun,
save the power in battteries, and then light a bright bulb over them
at night? I know the idea is not as "bright" as your's, but the system
is uniquely yours. Perhaps I could sell power back to the Electric Co.?
How much royalties will you require?

Tom

>>
We may not aggree with the ARRL all the time or any of the time. But they
are the only game in town. Ham radio in the US and the ARRL are tied togeather.
If I don't like the only way I can change it is to join up and get like minded
people to do the same and change the ARRL officals.

This may not suit you or me but that's the way things are. The ARRL has
managed to defuse any other organization that tried to usurp any of their
territory.

I personaly disagree with a lot of the league's policy but I agree with a
lot of it too. IMHO they are a net positive force for ham radio.

>hard to copy.

Good description, Gary; in fact, I'd go so far as to say that
for stations in the middle latitudes, the "raspy buzz" is the most
common indication that auroral propagation will support two-way
communications from that far south. AM has always been impossible
to copy under such conditions, although SSB is used quite a bit
despite the distortion. CW is probably the most prevalent mode,
and keying speeds are kept fairly low because of the difficulty
in copying.

I'm speaking, of course, primarily of 2-meter work (which is
where I do most of my VHF "DX chasing") and aurora is a great way
to work new grids! Only takes 75-100 watts and 10-12 dBd of
antenna gain, although I have made a few contacts at the 25 watt level.

And, by the way, the aurora season is upon us, so keep those
receivers tuned to 144.2 and keep the antennas pointed north; you
never know when something might pop loose (although auroral pro-
pagation forecasts do help forewarn when conditions are most
favorable).

Date: 1995-04-03 00:00:00 UTC
From: MOWE@vm.stlawu.EDU
Message-ID: <03APR95.08492888.0104.MUSIC@MUSIC.STLAWU.EDU>
Source record: 249465

Announcing a new e-mail reflector for amateur EME operators.

Moon-Net has been established by Michael Owen (W9IP) with support of his employer, St. Lawrence University. This reflector is devoted to exchange of information regarding all aspects of EME operation. It is an unmoderated list open to anyone with an interest in EME.

Moon-Net traffic should adhere closely to EME-related topics. Please refrain from posting VHF-, satellite- or general ham radio-related messages to Moon-Net. Also, please avoid cross-posting messages to/from Moon-Net with other radio-related lists.

Moon-Net is not archived.

To subscribe, address a message to : LISTSERV@VM.StLawu.EDU
In the body of the message, put "SUBSCRIBE Moon-Net" followed by your name. For example:

SUBSCRIBE Moon-Net Michael Owen

When your request for subscription is received, a file of instructions will be sent to you along with confirmation of subscription. This should only take a few moments.

To un-subscribe, the message should be UNSUBSCRIBE (everything else is the same):

UNSUBSCRIBE Moon-Net Michael Owen

Since subscription/unsubscriptions are handled automatically, no other text will be read if the address is LISTSERV.

****
To post a message to the net, address it to : Moon-Net@VM.StLawu.EDU
****

If you have problems, send a message to MOWE@SLUMUS.STLAWU.EDU

This is the first LISTSERV at this site so users should expect a few start-up glitches. Please be patient.

Michael Owen W9IP

re: SCAF filters

I use a SCAF in my EME work, where its very sharp cutoff and moveable passband (mine is decade switched) are very useful and desireable attributes. They also have far less tendency to "ring".

I'd be interested in hearing from other folks who are using the DCI-100
Voice mailbox card on there repeaters.
We just installed ours here in Jerusalem, Israel and it's working very nicely.

> TM>Wild Animal Park, and Six Flags in Valencia, Ca. I have spoken with reps
> TM>from the zoo, and 6 flags, and both have basically agreed to let ht's in
> TM>the park. It seems that most folks are just paranoid that we will

ok, I did call the Wild Animal Park, and they will not budge. No personal
radios are allowed. The reason they give is that somne of there shows are
radio controlled. They have had trouble in the past with some folks
intentionally jamming the frequencies and releasing exoctic birds when
they were not suppose to be released. The birds cost too much money, and
they said at this time they will not budge on their policy.
I tried folks. Maybe in the future.

What you need is a device called a "Ring down circuit" from a company called
Viking in Hudson, WI (Can't remember the phone #, but their in the book.)
They don't sell direct, but they can give you the name and number of a
dealer in your area. The Viking model number is a DLE-200A. You can find it
for around $100.

PHONE------------DLE-200A--------------PHONE

If either end goes off hook, the other end will ring. When the other end
picks up, a regular phone conversation may take place.

Call it a TELCO-ELIMINATOR!

ARLB033 More calls for some areas

More calls for some areas

According to a new FCC fact sheet, an ARRL request for call sign
relief for amateurs in Hawaii, Alaska, and Puerto Rico has been
honored.

The ''Amateur Station Sequential Call Sign System'' Fact Sheet dated
February 1995 replaces one dated June 1991 that is referenced in the
FCC's recent vanity call sign report and order.

The new fact sheet incorporates changes that the League asked for in
November 1993, expanding the opportunities for amateurs in Alaska,
Hawaii, and Puerto Rico to obtain call signs that reflect their
geographic location.

According to the new fact sheet, call signs in Alaska (Region 11),
AL, KL, NL, and WL are no longer limited to the numeral 7. Any
numeral, 0 through 9, is available. The call signs KL9KAA through
KL9KHZ are reserved for assignment to US personnel stationed in
Korea.

In the Caribbean (Region 12), KP3, NP3, and WP3 (or 4) call signs
will indicate the Commonwealth of Puerto Rico (except Desecheo
Island).

In Hawaii and the Pacific (Region 13), AH7, KH7, NH7, and WH7 (or 6)
call signs will indicate Hawaii except that the letter K following
the numeral 7 will indicate Kure Island.

Systematically assigned call signs in Groups A (Amateur Extra Class)
and C (General, Technician, and Technician Plus class) for Alaska,
Hawaii, and Puerto Rico using the traditional numerals (7, 6, and 4,
respectively) have been exhausted.
```

The new fact sheet also designates Group D call signs for club and military recreation stations, applications for which have been accepted by the Commission since March 24, 1995.

It is not known if the FCC has yet issued any call signs under these new guidelines.

SB NEWSLIN @ ALLBBS $NLIN.920
Amateur Radio Newsline #920 02 Apr 1995

Amateur Radio Newsline is produced as an audio service by Newsline, a service of the Westlink Radio Netowrk. The transcribed version is produced by Dale Cary, WD0AKO from materials provided by Newsline. and is jointly distributed to online services and bulletin board networks by Steve Coletti and Dale Cary.

Copyright owner is Newsline. Permission to reuse all or part of either this written or the audio form requires that the item be taken in it's entirety, not be subject to any further editing or commentary, and that full credit given to Newsline as the source.

Permission is granted to all amateurs who want to transmit the audio version in it's entirety over nets or repeaters. The text version may be used for packet distribution as long as it is sent in its entirety and the BIN header is kept intact.

NOTICE: When Newsline is transmitted in it's full form over voice or digital forms of Amateur Radio, it is recommended that the closed circut advisory be deleted. Audio, Computer, and Packet retransmissions must be made without the editing or deleting of any other part of the Newsline content. Unauthorized additional commentary to the original message is also prohibited. To do so is a violation of copyright and subjects the initiator to legal action by Newsline.

Newsline may also be excerpted for code practice transmissions, and may be used as a reference source in bulletin board discussions under acceptable Fair Use practices.

Any other use is not allowed without the expressed permission of Newsline.

Editorial comment, news items and all other business should be directed to Bill Pasternak, WA6ITF, Newsline's Producer and Editor-In-Chief.

The following is a QST

The FCC says "Go" on two call sign programs, the ARRL asks
reconsideration on vanity calls and what is single point of
contact all about? Find out on Newsline report number 920 coming
your way right now!

(*****
AUTOMATIC RENEWAL FORM

Renewing your ham license is getting a lot easier. This is because the FCC is coming out with its automatic ham radio license renewal form. It's called Form 610-R form and will be automatically sent out to amateurs whose licenses expire on or after September 1st, of this year.
Tentative dates are set so the first notices will be mailed around June 1st and subsequent mailings will be made about 90 days prior to expiration of each hams license. This new FCC renewal service will probably put an end to need for the ARRL to provide its free license renewal reminder service to its members. Whether or not the W5YI VEC will continue to offer its five dollar license renewal service is not known.

(*****
CLUB CALLS

Effective immediately, the Federal Communications Commission is accepting applications for new club and military recreation station licenses. Call signs will be issued by the FCC from the Group D call sign block, based on the applicant's call district. A special FCC Form 610-B must be used to apply, and applications must be sent to the FCC's Gettysburg Licensing Facility, 1270 Fairfield Rd, Gettysburg, PA 17325-7245. Form 610-B can also be obtained from the ARRL VEC for a self addressed stamped envelope.

(*****
800 SUCCESS

Also from the FCC, word that its Gettysburg, Pennsylvania license processing 800 information number may be too successful! They are already considering a second line and also looking into ways of releasing information on new licenses via the Internet. We also hear that in regard to the latter, the FCC staff is turning to the American Radio Relay League for help.

(*****
VANITY CALL SIGN RECONSIDERATION SOUGHT

The ARRL has petitioned the FCC for partial reconsideration of one aspect of its proposed vanity call sign program. The League wants the Commission to require that amateurs requesting vanity call signs in eligibility gates other than Gate One to specify call sign choices in the call sign region of their then current mailing address.
The League says it believes that the history of call sign regions and the nature of Amateur Radio communication indicate that call sign regions should be retained for vanity call sign applicants. It notes that some call sign regions have fewer available call signs than others. It says that allowing an open

field would deplete the call sign pools in these regions. This says the ARRL would ultimately deprive some applicants who want a call sign in their own region the opportunity of obtaining one. The ARRL cites the limited call sign banks in Puerto Rico, Alaska and Hawaii as examples.
The League voiced no opposition to this inter district call sign assignment to Gate One. This is because Gate One is for applicants for a previously held call sign or the call sign of a deceased relative.
The ARRL says that aside from this one point that it otherwise it fully supports the Commission's vanity call sign proposal. The League adds that it believes sufficient time is available to consider the proposed change before the FCC is ready to open Gate Two, the first gate that would be affected.

(*****
NEW HAMSATS LOST

Two new hamsats have been lost in a launch gone wrong. On March the 28th a Russian START rocket roared toward space carrying three satellites, two of them dedicated to Amateur Radio. But something went wrong with the converted intercontinental ballistic missile turned satellite launch vehicle. Instead of achieving a polar orbit, it instead fell into the sea. Lost was an Israeli amateur radio satellite built at the Technion-Israel Institute of Technology in Haifa called TECHSAT One. Another was a Mexican built Microsat designated as UNAMSAT One. It was built at the Autonomous University of Mexico under the direction of XE1TU. The third satellite was a Russian constructed spacecraft, its mission unknown. The cause of the launch failure is also unknown.

(*****
SINGLE POINT OF CONTACT

For several months, we have been hearing the term "single point of contact." This, as it relates to matters of hams dealing with the FCC. In fact, single point of contact seems to be a term coined by somebody at the FCC to describe the way the agency wants to deal with the ham radio community. That being to interface to all of ham radio through one individual or group to the exclusion of all others. And, over those same months, the FCC has been making it known that it wants the American Radio Relay League as that single point of contact. Especially in matters of repeater frequency coordination.
And now, the commission and the ARRL appear to have struck a deal to see if the concept of a single point of contact can work. As reported in last weeks newscast, any ham wanting to operate in the newly created 219 to 220 MHz band must pre-register with the ARRL at least thirty days before going on the air. The League has agreed to keep a master list of stations operating between 219 and 220 MHz and to also assist hams in registering their

operations with various Automated Maritime Communications Systems sites. And, at least on the surface, it appears as if that will be as far as league involvement will go.
Unlike repeater coordinators, the ARRL will not assign any operating frequencies. Nor will it approve or disapprove of a ham going on the air. It will however be keeping tabs on all who operate the new band, ready to furnish that information to the FCC.
With an ARRL sponsored meeting of all the nations repeater coordinators coming up sometime this year, those hams involved in frequency accommodation efforts are getting a first glance at what the FCC and the ARRL envision a single point of contact, to be. What they see and the way that they perceive it will probably be the key to the success or the failure of the concept in this area of ham radio as well.

(*****
COBRA ELECTRONICS NAMED OFFICIAL SPONSOR OF REACT

On the public service scene, word that Cobra Electronics Corporation has been selected as an official sponsor of Radio Emergency Associated Communications Teams. Better known as REACT International, this is an organization which promotes the use of two-way radio communications to ensure on-road highway safety. According to Cobra's Steve Yanklowitz, the new pack with REACT is a part of continuing efforts by that company to make auto travel safer and more secure. As part of the agreement Cobra will assist the REACT in providing emergency services to motorists. Cobra will also provide technology updates so REACT volunteers will be aware of all the state-of-the-art communication products which can increase the effectiveness of their safety efforts.

(*****
E-COMM

Speaking of public service, have you ever hear of John Hart N0OCF or E-Comm? If you haven't already, you will. This is because John Hart is on the cutting edge of tieing ham radio crisis communications to the information superhighway. He says its a service whose time has come.

For more information write to N0OCF at E-Comm, 767 South Xenon Court, Lakewood, Colorado 80228. Or you can contact John over the internet. He has several electronic mail addresses, but the main one is jhart@teal.csn.net

(*****
GEORGE WILSON W4OYI UPDATE

The condition of ARRL President George Wilson, W4OYI, who suffered a stroke on February 11th is greatly improved. As we go to air, the word from League Headquarters is that W4OYI is

expected to be transported by air ambulance from the Virginia hospital where he has been undergoing treatment, to his home town of Owensboro, Kentucky. George will enter a transitional care facility in Owensboro until he is ready for admission to a rehabilitation facility.
From this time on you can send get well cards to George's home address of 1649 Griffith Avenue, Owensboro, Kentucky 42301.

(*****
MITNICK

Accused computer super hacker Kevin David Mitnick, N6NHG, could wind up one of the richest people behind prison bars. That is if he can find some way around laws that prevent him from cashing in on a new film and CD Rom video game based on his alleged exploits. According to the entertainment trade publication the Hollywood Reporter, Miramax Films has acquired worldwide film rights to a book about how the FBI caught its most-wanted computer hacker. According to the story, Miramax plans a fill length theatrical release film followed by a CD Rom game from which the company stands to make millions if not hundreds of millions of dollars. According to the Hollywood Reporter story, Miramax paid an undisclosed sum for rights to the book "Catching Kevin: The Pursuit and Capture of America's Most Wanted Computer Criminal," by computer hacker tracker Tsutomu Shimomura and New York Times reporter John Markoff.
Shimomura is the San Diego computer security consultant who made it a personal vendetta to track down N6NHG after Mitnick was able to gain unauthorized entry by modem into Shimomura's home computer. And John Markhoff is no stranger to the Kevin Mitnick story. Back in 1991 he and writer Katie Hafner authored the book Cyberpunk that told the story of three separate computer hacker groups including a detailed account of the exploits of Kevin Mitnick, N6NHG.
While there is a lot of money at stake here it a pretty good bet that Mitnick may never see any of it. This is because of new laws in several states including New York and California preclude someone accused of a crime from profiting from the sale of his or her story. This probably means that Mitnick will not be permitted to share in any profits from the outside business ventures based on allegations of criminal activity.

(*****
YOUNG HAM of the YEAR

A reminder that nominating period for 1995 "Young Ham of the Year Award" is now open. This award now in its ninth consecutive year, is presented annually to a United States licensed Radio Amateur who is 18 years of age or younger and who has provided outstanding service to the nation, his community or the betterment of the state of the art in communications through the Amateur

Radio service.
Any continental United States FCC licensed ham radio operator aged 18 and younger who have used Amateur Radio to significantly contribute to the benefit of the service, to the sate of the communications art, to their community or the nation are eligible to be nominated. Thanks to corporate support from Yaesu U.S.A., the 1995 Young Ham of the Year will receive an expense paid trip to the Huntsville Hamfest where he or she will be presented the award. The winner will also receive a VIP tour of the Marshall Spaceflight Center and Spacecamp courtesy of C-Q Magazine.
All nominations must be submitted before June 30th, 1995 on an official application available for a self addressed stamped envelope to the 1995 Young Ham of the Year Award, %Newsline, 28197 Robin Avenue, Saugus, California 91350. These nominating applications are also available electronically. You can download them from the ham radio files section on GEnie and America Online.

(*****
DX

In DX, the 1995 International DX Convention will be held April 21 to the 23rd, at the Holiday Inn in Visalia, California. The Northern California DX Club will host this 46th annual event which is one of the oldest and best known DX functions held each year. The ARRL sanctioned event includes seminars, DXpedition programs, QSL card checking, exhibits, prizes and much more. For details contact Ted Davis, W6BJH, P.O. Box 494243, Redding, CA 96049.

(*****
GEORGE FISCHBECK NOW KE6SBY

And finally, unless you live in Los Angeles or Albuquerque, the name Dr. George Fischbeck may not mean very much to you. But in those to cities and the areas nearby, Dr. George is quite literally a television weather reporting legend.
Currently holding force at KCBS channel 2 in the City of Angels, Dr. George began his television career while teaching in New Mexico. Word is that he never really planned to go into television, but could not say no to an offer to do the weather on what was then Albuquerque's highest rated news program.
When he moved to the City of Angeles, Dr. George was quickly gobbled up by KABC channel 7 where he plied his trade for the better part of two decades making the complexities of the numerous microclimates of Southern California easy for anyone to understand.
And for many of those years, Dr. George also wanted to be involved in another part of communications. He wanted to be a ham radio operator, but his many broadcast and charitable responsibilities took up all of his time. But that's all changed with word that Dr. George has finally achieved his dream. Just a

few days ago Dr. George Fischbeck added a new suffix to his name. Its the ham radio call sign KE6SBY.
And that's not all. For his very first official ham radio public appearance, Dr. George has accepted an invitation to be the Grand Banquet Speaker at the 1995 Southwest Division Convention on board the Queen Mary Ocean Liner attraction on Labor Day weekend, September 1-3rd. Another well known broadcast celebrity is slated to Emcee the banquet. He is the former all night host of KABC Talkradio, Ray Briem, N6FFT.

(*****

243. "E" Layer Phenomena

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-03 00:00:00 UTC
From: Torpor@Fnalv.fnal.gov
Message-ID: <3lp9d8$den@fnnews.fnal.gov>
Source record: 249475

I attended a lecture at Fermilab which was conducted by
Dr. Walter A. Lyons of Forensic Meteorology Associates
from Ft. Collins, CO.
His lecture brought to mind the sporadic "E" layer events
Amateur Radio Operators experience occasionally. While little is
known about the cause of "E" layer events, I speculate the subject
of his lecture may affect the "E" layer.
His presentation was about a phenomenon termed "Sprites", which
are huge bursts of energy exiting the top of large thunderstorms.
Some of these bursts of energy have been estimated to reach 100KM
above the storm. He presented video and electronic measurements
to verify these events.
The first known recording of a "Sprite" event was made by
chance at the University of Minnesota 1989 while testing a
image-intensified video camera.
Dr. Lyons indicated this field of research is wide open
because very little is known about "Sprites". Each time the
scientists gear up for a particular set of "Sprite" measurements,
they uncover something else previously un-noticed. He inferred
that these events could have world-wide effects, not just in the
area of the thunderstorm.
I would suggest if you get the chance to attend one of his
lectures, do so. It is very fascinating. Perhaps someone who is
researching "E" layer dynamics can make a positive connection
between "Sprites" and "E" layer phenomenon.

Regards to all, Lester

244. Re: What range to expect from ATT 9100 900 MHz cordless phone?

Newsgroup: rec.radio.amateur.misc

I have the Uniden 9100 900MHZ and seem to get about 300feet line of sight
till I am in trouble. Thats means I can go next door okay. Without
touching
the insides I am thinking maybe a 900MHZ co-linear antenna would might
help you in your case. At the very least try callin ATT's
service/warrenty
help line. I do not have the number, but 1-800-555-1212 will get it for
you.
I friend of mine had used ATT's helpline in the past for his answering
machine,
so I know its out there.

Good luck,

245. Re: Restocking Fee

Source record: 249477

The reason Ham radio dealers charge a restocking fee is because no one wants to buy an open box. The restocking fee is how much they discount the equipment you returned in order to move it.

>Best, Mark (WA3RMV)

Ring voltage is 110v. I've had my hand on a number of 66 punchdown blocks when calls came in. Normal dial tone is around 50v give or take 5v.

>
>---
> * QMPro 1.53 * Very Best Regards, tom.alldread@kbsbbs.com
>

Well, I had my terminology wrong I was talking about PWM all along.

My thoughts were that if the original PWM carrier was sampled at
the rate of its unmodulated square wave carrier then a bit stream
could be derived that could be mapped in such a way as to
extract the original analog modulating signal via D/A conversion.
I didn't expect the bit patterns to have traditional A/D
sampling values. I expected something more akin to Flash digitization.

I was able to copy the cw transmission on 12.7185 MHz on Friday evening (local). NMN was the source station, and would appear the cw op was using a bug. Ah, the old ears still can detect cw, from a bug. I did not hear what had happened to NMC, and it was not mentioned in the message. Yes, I did forward my copy to NMN, to obtain the certificate.

I am amazed at how MANY outfits there are that still cater to home-builders
and QRP operators. Must be a LOT of demand out there! Magazines such as
"73 Amateur Radio Today", QST (sometimes) and "Shortwave Magazine" (England)
still publish a lot of good construction articles for hams.
This is NOT an exhaustive list. If you have additions, send them to me and
I'll gladly add them to this list. Most of these companies will gladly
send you a catalogue if you call or write requesting one.
Also, if you find that one or two of these companies are out of business,
PLEASE drop me a message & let me know about it so I can delete them!

This list was prepared by AF4K, Brian Carling 7 January, 1995
Please send additional sources for inclusion in this list.
If you go to a hamfest and see someone selling tubes, get a card
please and send me their name, address and phone number.

> if there is anyone in the area. Any ideas on how to improve this
> situation?
>

As an aside... My two brothers, and myself travelled to Bethlehem, PA
two weeks ago using two cars. My brother (N3UMY), and sister-in-law
(N3SYE) were in one car, and I was in another. We used the 2-meter
simplex frequencies around 146.50 mHz. I was surprised at the range we
would get, even when running only 5 watts. Depending on the terrain, it
could be 5 miles, or more. If we had a problem copying one another, we'd
boost our power. (I can go as high as 25 watts. My brother has a 50 watt
rig.)

About a month ago, there as a thread that suggested the FCC open a new
CB service in the VHF (or higher) range that would be strictly for highway
use. Many posters said that the GMRS at 460 mHz already serves this
purpose. Now I've never used 440 mHz mobile, so I'm wondering how is its
performance compares to 2-meters when running simplex. Can I expect the
same simplex range on the highway?

Now Ed,
You couldn't possibly be suggesting that towers DON'T create TV
shadows, or that rusted or dis-similar connections DON'T cause noise...
To do so would contradict your own publications...

Thanks to all who informed me as to what "CAMSLANT" meant.

Yet another question: many ARRL bulletins and Sitor Telexes have 4 Ns at the end: what does NNNN mean, anyway?

Thanks. --Leigh/KM6JE.

Most (well, all) of the amateur grade 1200 repeaters are abysmal,
especially when you install them at a high RF envronment, such as
a hilltop site. They are also not known to be stable under
temperature extremes within buildings. Even here in "Sunny
Southern California" hilltop buildings will go from 40 to 80
degrees F in a 24 hour period.

Many of the successful groups use a VHF commercial radio, then
use transverters to effect /inputoutput at 1200 MHz. This involves
only a little more work, but will give you a series of commercial
made replacements should part of your radio go "belly up"... as
well as providing a "real" RF deck where you are assured of
top-quality operation.

262. EOSS-22 Balloon Flight in Colorado

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-04 00:00:00 UTC
From: rickvg@usa.net
Message-ID: <N8WWlSEHGIoA075yn@usa.net>
Source record: 249194

EOSS-22

(4/15/95) University of Colorado at Colorado Springs (UCCS) experimental flight.

Project Lead Jack Crabtree

note: This Launch has been delayed again. The corrected launch date is listed below.

FLIGHT PROFILE FOR EOSS 22

LAUNCH DATE: April 15, 1995
LAUNCH SITE: to be determined
LAUNCH SITE COORDINATES:

available after launch

LAUNCH TIME : 14:00 UTC
EXPECTED TRACK: Between 35 degrees and 145 degrees azimuth
FLIGHT EXPERIMENT: Atmospheric Sampling of Inversion Layer
SECONDARY EXPERIMENT: Ozone sampling throughout the flight.
PROJECT INTEGRATOR: University of Colorado at Colorado Springs, Jack Crabtree AA0P

Shuttle II FREQUENCIES:

Telemetry:
144.340 MHz FM (1 Watt output) - The Packet telemetry stream is in ax.25 format at 1200 baud and is readable in plain english for the most part. Included in each telemetry frame is an APRS position string (APRS users see note below). Every few minutes a CW ID is transmitted on this frequency.

Beacon:
147.555 MHz FM (250 milliWatt output) - Continuous CW ID
ATV:
426.250 MHz AM (1 Watt output) - Color NTSC video
10 Meter Beacon:
28.322 MHz USB (500 milliWatt output) - Continuous CW ID

Foxhunters:

Colorado Repeater Association 448.450 MHz (tentative)

PURPOSE OF THE FLIGHT:

Two experiments will be flown.

1.) A gas capture experiment to sample air below and above the thermal inversion that regularly resides above Colorado Springs. These samples will be obtained by using computer controlled, evacuated canisters. These canisters will be recovered and the gasses they capture will be analyzed for their constituents.

2.) Ozone will constantly be monitored throughout the flight. This information will be transmitted to the ground via telemetry channels in the EOSS "Shuttle II" where they will be captured on computer for later analysis.

notes:

Automatic Position Reporting System (APRS):

EOSS Shuttle controllers now beacon on the packet telemetry frequency with an APRS position string. If you are running APRS you should be able to graphically track the progress of the flight on the "CODENVER.MAP" map file. The Shuttle is not a TNC equipped packet station. It only reads data from various sensors and experiments and formats and transmits that data in AX.25. Therefore, beacons from other APRS stations will NOT be retransmitted (digi). So, inorder to minimize possible interference with hams in your area, we request you turn off the position beacons in APRS. Thanks!

ATV:

The Amateur Video Signals from the payload may be picked up by a cable ready TV set on channel 58. However, you need to be very close to the balloon, and have a directional antenna to do this as cable receivers do not have much sensitivity (why should they?). If you don't have a cable ready set, try tuning DOWN from UHF channel 14. Some sets can receive the signal there too.

Who Can Hear It:

Almost all our transmitters are on VHF or above frequencies. Therefore, you need to be line of site to the payload to hear/see it. Since the payload rises to an altitude of over 90,000 feet on most missions, reception is usually possible for folks in most of Kansas, most of Nebraska, most of Wyoming, extreme south eastern Idaho, eastern Utah, north eastern Arizona, most of New Mexico, northern Texas, and western Oklahoma. DO NOT BE DISCOURAGED by the apparent low power of our signals. I usually monitor the 147.555 Beacon with an HT from the ground station throughout the flight. The signal is strong even at 130 miles and I only lose it when the balloon descends below my horizon.

We have a 10 meter beacon under construction. This beacon should be flying with us from now on. Depending on conditions, this signal may be heard just about anywhere world wide. However, it's most likely to be heard one or two skips away limiting it's reception to the USA, Canada, and Mexico. But, it can't hurt to try and copy it.

Please e-mail to me the internet address of Kenwood, Yaesu, Icom, Alinco, Standard, Ten-Tec, or any other manufacturers you may know of, I would LOVE to write them (electronically) and tell them what's on my mind, like telling Kenwood that they moved the mic in the wrong direction (up closer to the speaker) going from TH-78 to TH-79.. the radio was very good for cross-band repeat and private phone-patching, the way of the world for those who can afford fancy radios like that anyway... it was useable, but not quite ideal, but on the -79 they moved it UP closer to the speaker instead of DOWN closer to where the MOUTH resides during FULL DUPLEX. Ever hear of FULL DUPLEX, KENWOOD???

Your reply will help me vent and maybe improve the TH-80. Thanks! 73 AA9IF/Ed

Oh, but driving and talking on a mobile rig on the Interstate and changing frequencies, PL's, making autopatch calls, that's OK?

Come on, don't scare people needlessly. Flying has been, rightfully so, described as hours of boredom interrupted by moments of sudden terror. The takeoff and landing is somewhat in between (normally). I would suggest, of course, full attention during those two and enough attention during the flight to avoid the sudden terror. That covered, GET ON THE AIR. 73 AA9IF aero-mobile

Given that there'd be no difference in the filing between a regular
amateur license and a special repeater license, why in the world
do you want hams to have to do that? Isn't their ordinary call sign
sufficient identification? I'd think it would just add confusion to
have one person with several different calls.

QSL him with a prayerful attitude. He is one of the most notorious
stations around as far as not responding to QSL requests and eating green
stamps. He's been written up in several of the DX rags because of his
(lack of) QSLing. I got a card from him in 1990 or 91 on the first try
but apparently that is the exception to the rule. My best advice would be
to work some other FR and QSL HIM - most of the rest of them are pretty
good about QSLing.

They WILL skip KP6. When I got my extra they were giving NO0x calls and I
decided to wait awhile thinking to get an NP0x...however they skipped the
P's and went straight to NQ0x. I didn't want one of those either so I
waited a litle longer and got NS0B.

Who knows but what they might eventually use KP6 for P.R.? I saw just a
few days ago where they are going to start issuing KH7's for Hawaii (less
the KH7Kx series which will be for Kure), KL6's for Alaska and KP3's for
P.R. because there are no "desirable" group A or C calls left in those
places.

270. Re: Arrl Membership

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-04 00:00:00 UTC
From: Sam.Barrett@f429.n326.z1.fidonet.org
Message-ID: <537_9504051321@woodybbs.com>
Source record: 249202

PHB>>In a previous article, gary@ke4zv.atl.ga.us (Gary Coffman) says:

PHB>>>In article <3lfopj$2ub@grape.epix.net> gandalf@news.epix.net (Async User)
PHB>writes:
PHB>>>>As a new Ham I was bombarded with all kinds of junk - including an ARRL
PHB>>>>membership form. As a teenager 25$ isn't exactly the first thing I find
PHB>>>>in my back pocket. Is the ARRL worth it? Forgive me if I sound stupid or
PHB>>>
PHB>>>Dues are scheduled to increase to $31 if they haven't already. Consider
PHB>>>it a cheap magazine subscription. There aren't many monthly magazines
PHB>>>you can get for $31 anymore. Plus there's the membership services offered
PHB>>>by the ARRL, and you will have a voice in the largest US ham organization
PHB>>>Yeah, it's worth it.

PHB>>I guess it's what you're into! My ARRL membership alone has saved me
PHB>>hundreds of dollars in being able to send DX QSLs via the outgoing
PHB>>bureau. And I have built many many things which appeared in QST.

PHB>>I think $31 would still be a steal!

PHB> It's really interesting how people's perspectives in different
PHB>avocational fields vary. For example, I'm also an amateur astronomer,
PHB>and Sky & Telescope costs $27/year. But all you get is a magazine; no
PHB>national org or anything like that. For the latter, you could join,
PHB>say, the AAVSO ($50) or A.L.P.O. ($20), or the Royal Astronomical
PHB>Society of Canada (RASC) for $36 and follow what the pros and advanced
PHB>amateurs are doing. So, to pursue that hobby costs at least $47 for
PHB>S&T plus the cheapest organizational membership. And, of course,
PHB>there's the cost of equipment (The cheapest 6" Newtonian plus accessories,
PHB>eyepieces, etc., will run you $500+, and it's roughly like having a
PHB>Ten-Tec Scout and dipole).

PHB> So, as hobbies go, the $31 for ARRL membership has *got* to be
PHB>one of the best buys around!

PHB> Paul, K4MSG

I'll just jump in here and add my two cents worth.

If at all possible, check into a Life Membership. In the late 1970's
when inflation was rampant, ARRL membership was $9 per year. A life
membership was 20 times the yearly membership. AND.... they would let
you spread out the payments over two years if you would pay $22.50 per
quarter. Total price was $180. I was still in my twenties then, so I
bit the bullet and paid it out. Now, fifteen years later, it looks like
it was a good deal. Not only have there been a number of price
increases, but the Life Membership is now 25 times the yearly rate.

So, if they will still let you pay it out, it would be something like $800 or about $100 per quarter. These are major bucks. It would be as hard today for me to come up with this as it was when I did it. However, if the rate is going up to $31/year, you are looking at an increase of $150 in the life rate. In 10-15 years, the $800 price will look pretty good.

Just my opinion....

.....Later...

M{>Hi,

M{>I will be in and around Marlboro in Mass. next week and would like to visit
M{>HAM shop.
M{>Can anyone give me any details and directions to shops in the area (I have
M{>heard there is
M{>a HRO in NH?). I`ll also have my HT with me so any info on local
M{>repeaters/freq would also
M{>be very handy.

M{> Thanks in advance.

M{> Robin GM4YED

Hi Robin,
I don't know the way to the HRO store in NH but you can put out a call
on the 146.640 or the 145.230 repeaters and there will sure be someone
there that will be able to tell you how to get there.

73 Welcome to Mass.

1 April 1995 no.204

==========
*** 4 2 5 D X N E W S ***
==========
edited by I1JQJ, IK1IYU, IK2ULV
traslated by I1-21171

BV - BV9AAA and BV9AYA are active until the 5th of April from the
P'eng-hu Is (AS-103). BV9AYA is QRV in CW/SBB all bands, BV9AAA
works mainly on FM on 29040 KHz.
EI - From 2 to 18 April, Gregor (DL1BFE), already portable U1O from
EU-066, will be QRV from Valentia Isl. (EU-121). Gregor will proba-
bly use the EI/DL1BFE/p call, to respect the CEPT license, but he
hopes to get the EJ/DL1BFE/m call from the Irish Telecommunication
Office. Gregor will also try to activate the Aran Is (EU-006).
FJ - N9SW is portable FJ from St. Barthelemy Isl. (NA-146).
FP - From 28 April to 7 May, Bruno (F5JYD) together with other members
of the Loos DX Gang, will be QRV from St. Pierre & Miquelon
(NA-032), all bands, WARC included, on SSB, CW, RTTY and RS12.

They will use the TX7I and/or FP/TM7I calls: QSL to F5JYD, via REF
bureau or direct to the following address: Bruno Filippi, 189 Rue
Barbusse, F-59120 Loos, France.
GU - Following what published in numbers 184 and 200, during the 50th
anniversary of Liberation celebrations, from 7 to 13 May the spe-
cial station GB50LIB from Guersney Island will be activated all
bands HF/VHF/UHF on CW, SSB and RTTY. QSL via bureau, or via GU3HFN
or to this address: P.O.Box 100, St. Peter Port, Guernsey, Channel
Islands via UK.
HH - KB0QNS is portable HH2. Activity also on WARC bands.
ID8 - Following what published in no. 203, the expected expedition to
Le Castella Isl (IIA KR-01), by Raul (IK8VRS) and his team, has

been postponed to one of the next weekends due to organisation problems. Raul reports that he wants to activate, Sunday 2 April, the Corica Rocks near Amantea (Cosenza), so far without IIA Reference Number.
IE9 - From the evening of 21 to the morning of Tuesday 25 April Roberto/ IK8BIZ, Claudio/IK8FPI and Bruno/IK8HOX will be portable IE9 from Ustica Isl (EU-051, IIA PA-01). All bands acivities, WARC included, CW and SSB. QSL to home-calls.
IR2B - Until the 9th of April the special station IR2B is active during celebrations of Busto Arsizio ARI Section foundation and "100 years of Radio" exhibition in Busto Arsizio. All bands operations HF/VHF/ UHF on SSB, CW, RTTY and probably SSTV and RS10/11 satellite. QSL via IK2HTY.
IT9 - From 28 to 30 April, IT9AXZ, IT9HLR and IT9WDY will be QRV, CW and SSB, from Porri Isl.(EU-166, IIA RG-01). On CW they will use the IJ9/IT9AXZ call, IJ9/IT9HLR on SSB and IJ9/IT9WDY on RTTY. The island is uninhabited, completely inhospitable with strong winds. Therefore operations will occur only weather permitting.
IY4W - The station IY4W (W for wireless) is active from Sasso Marconi (BO) until the end of April, to celebrate the centenary of the radio. The "Casalecchio Team" will activate the station mainly on CW, and also on SSB and RTTY, all HF bands (WARC included). QSL via I4ALU.
J2 - Following what published in number 200, J28BQ, J28FD and J28GR will be active from Sept Freres Isl. (AF-059), at about 120 Km north of Djibouti, from 14 to 21 April. The J20SF call will be used; opera- tions on CW and SSb. QSL via F5LBM.
OH - The special station OF1AA is active until 25 April, during the 40th anniversary of Turke Radio Club (OH1AA) celebrations. QSL via: OH1AA, P.O.Box 29, FIN-20101 Turku, Finland.
P4 - N7NG is portable P4 from Aruba.
S0 - The ARRL DXCC Desk will give no more credits to the QSLs from stations /S0, accepting only those from stations with complete S0 calls issued by the Western Sahara Telecom Office in Spain.
V3 - Don, ZF2VW (ex DJ0IR), from 10 to 24 April will be active as V31VW with CW and SSB activities on 10 to 20 mtrs bands, mainly on WARC (12 and 17 mtrs). QSL via Vancouver Mountain Radio Club, P.O. Box 1622 Vancouver, WA 98668, USA.
V7 - Following what published in number 203, Ken, V73C, has now a new QSL manager: N4GAK, Bruce Smith, 15 Henderson Dr.,Fayetteville, TN 37334, USA.
V85 - Gerald, V85GA, reports new QSL info for active stations from Brunei V85BG, Club Station, PO.Box 373, MPC 3703, Brunei (G3JKX is NOT his QSL manager); V85NL (op. Kanzi) QSL via JA4ENL; V85CJ (Jacques) QSL via G3ORC.
VQ9 - Following what published in number 193,from the 1st of April to the 25th of May Jim, K5TNP, will be in Diego Garcia as VQ9TN. During this trip he hopes to activate the Egmont Is. (AF-041) as well.
3D2_cr - Following what published in number 203, the operations from Conway Reef have started after many difficulties in approaching the island. 3D2CU and 3D2CT will be active until 3 April.

4S7 - Mario, HB9BRM, from 2 to 27 April will be portable 4S7. Look for
him on 14222/21222 KHz at about 1700Z and on 3780/7050 KHz between
1900Z and 2100Z. QSL to his home call.
4U0ITU - During the month of May Tony (IK1QBT) and Mauro (IK1CJO) will be
active from ITU Geneve as 4U0ITU .
5R8 - From 28 April to 4 May, JE8BKW and JH8CLU will be active from Mada-
gascar (AF-018). JH8CLU has received the 5R8DL call, but JE8BKW is
still waiting for his call.
8Q - From 12 to 27 April Juergen, DL1IAI, will be QRV from Kuredu Isl.
(Maldive Is., AS-013) probably using the 8Q7AI call on 10 to 80
mtrs (160 mtrs also if possible), only on SSB. QSL via bureau
to DL1IAI.
8Q - From 21 April to 6 May HB9DIF will be QRV from Maldive (Thulagiri
Isl, AS-013) as 8Q7BV on 10 to 40 mtrs bands only on CW mode. QSL
via P.O.Box 130, CH-4206 Seewen (SO), Switzerland.
9M0 - Following what published in number 199,the 9M0A station is regular-
ly active from the Spratly Is, exactly from Layang-Layang Isl. It
may be useful to remember that sometimes the operators work in a
10 Khz range answering to DXers on their own same frequency. QSL
via JA9AG.
9N - JA8MWU will be active from Nepal as 9N1MWU from 26 April to 10 May
operating all bands CW/SSB. QSL via home-call.

|>
|> ...Jay, WA5WHN (former RM-2, USNR)

Hello Jay. Sorry, but it was not a bug. Sergio Morales (also KP4FFW)
sent the final msg from NMN using a Vibroplex Iambic Delux with his
Amateur call engraved on it. The keyer was an MFJ 407C. This
transmission went out live over one frequency. The msg was sent on
all other freqs under automted control. The way to tell which you
heard was by the speed. Automated msg was sent at about 15 WPM. The
msg from Sergios fist was about 25 WPM with a coupla IMIs toward the
end.

Hi Alan. I have found this to be true on element 1A only. For 20WPM, I
have never seen an examinee pass on copy. And when we began using
multi-choice, I was shocked to see the copy sheets of some of the people
that passed. Sometimes there is not one complete word on it. We have
had applicants answer 7 of 10 at 20 WPM when I would guess they were actually
proficient at about 12 to 15 WPM. A sign of the times, I guess.

Dan Bjerke <danb@cv.hp.com> writes:

>I'm interested in comments from people who have owned/used Ten-Tec
>radios.

Dan,
I have no rpoblem .....problem stating that the ads are not bull. The
rigs are well built and the technology behind them is first-class. If
you are looking for the sterility of a ft1000 and the phase noise of a
kenwood 450s, the it may not be the rig for you.
Most ten tec folks appreciate tight yet warm filtering, excellent audio
on rx (easy on the ears) and compliments on transmit audio. Crystal mixing
as implemented on the omni VI makes synth'd rigs seem cheap. If you
get a chance to use an omni V or VI, try to have a good synthesized rig
right there for comparison. let your ears see what they think.

The deal with the finals in the omni and paragon is that they are bulletproof.
The PA sections are broadband designs and will not shrivel at 2.1 swr.
I see many kenwood owners wringing their hands at 1.7:1 and it is
not a pretty sight.

: JH>and I'd pay that much for the magazine alone...call 1-800-32-NEWHAM
: JH>and they will send you a junior membership form...

: Surely they don't get QST for that price too?????

On April 1, all ARRL dues went up $1.00 per year, so the figure you cited is now $16.00. Regular Membership is $31.00 per year.

ARRL has a number of Membership dues special rates:

Blind people may become Members for $5.00 per year without QST.

People 65 or older may become Members for $25.00 per year.

A member of the immediate family of a League Member may become a family Member for $5.00 per year.

To qualify for the youth discount, a person must be the oldest licensed amateur in your household.

13-21 years old: $16.00 per year
12 or under : $8.50 per year

Yes, they are Full Members, receiving QST for one year. The Membership may be renewed annually at the applicable youth-discount price.

Multi-year discounts apply to Regular and senior Membership rates. Proof of age is required for youth and senior Memberships.

Associate Membership is available to non-hams and non-US hams. Contact djahnke@arrl.org for information about Membership.

Edward Oros (ac3l@ix.netcom.com) wrote:
: Has anyone every heard of a method of predicting band openings by
: observing the sun?
: There are times when the sun appears to be a sharp disk shape and the
: clouds in the area near the sun are opaque. In this state the band is "OPEN".
: Other times the sun seems larger and has a fuzzy edge to the disc, the clouds
: appear semi-transparent, and the sky is slightly white looking around the
: area of the sun. Here the 10 meter band can be open but only during the
: traditional DX seasons on 10 meters (fall/winter).
: The final state I've noticed is when the sun appears very
: large indeed and the clouds are translucent. The sky around the sun is
: very very white, rather than any shade of blue. When this happens, 10
: meters is always dead (East-West).

I've never noticed this, but it may have some basis-in-truth. I doubt
you're seeing any ionospheric effects, but you may be noticing the
changes in humidity/baro pressure that accompany tropospheric ducting.
As a further investigation, check your local weather for the positions
of high and low pressure fronts for each condition you notice above, and
see if there's a correlation between what you observe, where the hi/lo
fronts are, and where the 10m band is open.

Neat idea, I don't often look at the sun!

290. QRZ Programming Assistance Needed - HP/UX

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-04 00:00:00 UTC
From: flloyd@qrz.qrz.com
Message-ID: <3lrhv0$8if@maple.enet.net>
Source record: 249252

I'm seeking someone (preferably a programmer) who has access to a
HP/UX platform who would be willing to compile and/or port the QRZ2
program to HP/UX.

We've recently completed versions of QRZ2 for NeXT, OS2, AIX, Solaris
and Irix (SGI). Since HP/UX is one of the few left, I'd like to fill
in the gap.

You will be asked to keep the information under non-disclosure, but
in return you'll get a free subscription to QRZ!

The code is written in ANSI C and usually takes little or no effort
to port. The mmap() system call is usually the toughest part.

So far, QRZ is supported on more systems than any other Ham CDROM.
While we're at it, I'd also like to get volunteers for other OS's,
including Linux and, if necessary, BSDI and/or FredBSD. If your
machine has a CDROM and does not run the current executable, please
let us know. Note that Macintosh still remains a bit of a problem,
however, we do have some 'experimental' code for it.

If you'd like to help out, e-mail: flloyd@qrz.com stating your machine
type and programming experience. No resume's please :-)

Note: this is not an offer for employment, and no royalties or fees
will be paid. What you do get is a free QRZ subscription and your
name handsomely emblazened on the README file.

73,

-fred AA7BQ

291. "E" Layer Phenomema

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-04 00:00:00 UTC
From: Torpor@Fnalv.fnal.gov
Message-ID: <3lrci4$9pf@fnnews.fnal.gov>
Source record: 249253

I attended a lecture at Fermilab which was conducted by
Dr. Walter A. Lyons of Forensic Meteorology Associates
from Ft. Collins, CO.
His lecture brought to mind the sporadic "E" layer events
Amateur Radio Operators experience occasionally. While little is
known about the cause of "E" layer events, I speculate the subject
of his lecture may affect the "E" layer.
His presentation was about a phenomenon termed "Sprites", which
are huge bursts of energy exiting the top of large thunderstorms.
Some of these bursts of energy have been estimated to reach 100KM
above the storm. He presented video and electronic measurements
to verify these events.
The first known recording of a "Sprite" event was made by
chance at the University of Minnesota 1989 while testing a
image-intensified video camera.
Dr. Lyons indicated this field of research is wide open
because very little is known about "Sprites". Each time the
scientists gear up for a particular set of "Sprite" measurements,
they uncover something else previously un-noticed. He inferred
that these events could have world-wide effects, not just in the
area of the thunderstorm.
I would suggest if you get the chance to attend one of his
lectures, do so. It is very fascinating. Perhaps someone who is
researching "E" layer dynamics can make a positive connection
between "Sprites" and "E" layer phenomenon.
Regards to all, Lester

292. ATV Video IDer needed

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-04 00:00:00 UTC
From: atwelld@montageski.ksc.nasa.gov
Message-ID: <3lrlo0$np1@niven.ksc.nasa.gov>
Source record: 249254

Does anyone out there have a schematic or know where I can obtain a schematic on a video ID circuit (for transmitting my call sign automatically). Various companies sell these things for as much as $175 but since I'm on a limited budget, I'd like to attempt to build one. Also, size and weight is important as I'm using it on a ATV pod which is being lifted on a kite. I guess the circuit consists of either a ROM or EPROM which I have the necessary interfaces for programming. Any help is appreciated.
Thanks

25 x annual subscription. Which until recently was 25 x 30 = $750. Payable
in either a lump or as installments. It might be $775 now that dues have
just been raised to $31.

>CAP using ham frequencies for SAR activities would be a grave mistake.

Bigger than you could imagine. One of the nice things about CAP being limited to 2 frequencies (well, when *I* was in it, we only had 1 VHF frequency pair: 148.15/143.90) is that when you're coordinating a whole buncha searchers out over a big area, you know where on the spectrum to find everyone. If you needed to not be heard by everyone you would call simplex or use (the now deprecated) 26.620 MHz frequency.

Besides, CAP is a corporation (officially), so wouldn't using Amateur frequencies be forbidden (because you're doing corporate "business" while you're out on a search)? Hmm...

Typical phones require about 100 Volts at 20 Hz to ring -- not an easy
thing to get from a battery supply. Best source is the hand cranked
ring generator found on the old wall and military field phones. The
same wires used for signal are also for ringing. Source has to be current
limited and shut off automatically when the phone is picked up, so as
not to deafen the called party.

307. Preserving Radio Telegraphy History

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-04 00:00:00 UTC
From: phb@syseng1.melpar.esys.com
Message-ID: <phb.797019031@melpar>
Source record: 249269

Anyone interested in joining an ad hoc group to investigate radio telegraph history preservation, including canvassing of interested organizations, identification of current museums/ collections/displays, and development of a plan for providing some means of wide public accessibility to wireless/radio Morse code history, is requested to e-mail me at the address below. This effort is intended to include military, commercial maritime, other commercial, and amateur development and use of radio telegraphic communications from the time of the first wireless experiments by Marconi to the present day. Significant events and historical milestones throughout this period will be emphasized.

Please note that this effort is to be entirely voluntary, and no commercial or pecuniary interest of any kind is to be represented or served by the participants therein.

Lester Wahl (Torpor@Fnalv.fnal.gov) wrote:

: His lecture brought to mind the sporadic "E" layer events
: Amateur Radio Operators experience occasionally. While little is
: known about the cause of "E" layer events, I speculate the subject
: of his lecture may affect the "E" layer.
: His presentation was about a phenomenon termed "Sprites", which
: are huge bursts of energy exiting the top of large thunderstorms.
: Some of these bursts of energy have been estimated to reach 100KM
: above the storm. He presented video and electronic measurements
: to verify these events.

Thanks for posting this. This is indeed very interesting. I've heard
about and I think even observed the connection between 6 meter E layer
activity and thunderstorms located along the path between two stations
communicating by way of the layer.
Until now, I have not heard of any possible explanation.

Yes, I have heard the phrase "... white of you." It is still a racial remark.
I don't understand what the word "white" would refer to in your above
comment except for race. Perhaps you did not mean anything by the comment
and we can attribute the remark to ignorance. I don't mean to insult you
by calling you ignorant. Ignorance is simply the lack of information on a
given subject... In this case racial remarks.

Dear friends,
we are preparing a ^650km (450miles) skiwalk through Greenland.
If there would be the case of an emergency, we would like to call
up friends in Ammassalik to get help.
Altough we have a 243/121.5MHz Distress Beacon, we want to go
on the safe side:
We are looking for a lightweight, reliable transmitter able to
reach a max. 400km distance. which unit would you recommend, how
costly is it and can we rent it for say, 8 weeks (july-september)
We really would appreciate a reply!
please email us...

wuend@orion.hrz.tu-freiberg.de

Cheers,
Silvio and Olaf.
P.S. What frequency is the marine channel #16?

>WC>wants to buy an open box. The restocking fee is how much they discount
>WC>the equipment you returned in order to move it.
>WC>Tnx & 73
>WC>Bill
>WC>N3OGH

If you think the restocking fee is to cover discounts to sell returned equipment you are being naive. The restocking fee is a penalty to discourage returns from customers. Think about it, all these department stores and computer shops and other large stores that take returns don't just throw out the returned items, they "reshop" them, which is a sellers term for returning them to the shelves. There is no discount and no notice that the item is not "new". Many computer stores, and other stores I am sure, shrink wrap the items so that they look even more like "new" items. Any time you buy from ANY major store you have a chance of buying a returned item, the only real exceptions are for safety or security reasons. Computer stores don't take back software since they think you already copied it and department stores don't take back underware for health reasons.

326. Marine Band Policing

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-05 00:00:00 UTC
From: dnielson@alpine_pcnext.NPD.Provo.Novell.COM
Message-ID: <3lv6dr$ffq@grok2.orem.novell.com>
Source record: 249038

I had a thought that I would like to put out for opinion. I live in an area (Utah) where marine band (legal) activity is not too terribly common, probably due to the fact of the increase of ham and cellular activity. I scan marine channel 16 (I'm into emergency communications) and I occasional here illegal activity there. I also have heard and know of some businesses/individuals that use marine band illegally.

My question: Who should be responsible for policing the marine bands. Apparently, from what I have heard, the marine band users (legal) are not worried about this problem, but I'd hate to see this service deteriorate just because "no one" is interested in taking care of the illegal activity. Any comments appreciated.

SB QST ARL ARLB035
ARLB035 FCC won't reconsider

FCC won't reconsider

The FCC has denied a petition for reconsideration to change the structure of Amateur Radio licensing in the US.

Rolf Jespersen, N3LA, had petitioned the FCC to establish three classes of amateur operator license, a petition the Commission denied in April 1994 (RM-8391).

Jespersen then petitioned for reconsideration, saying that supporters of his position did not know when to file supporting comments and that telegraphy ''ability,'' not necessarily telegraphy ''proficiency,'' should be the criterion for the class of operator license obtained. He also said that his suggested new rules would promote growth in the amateur community and reduce delays in obtaining new and upgraded licenses.

The FCC said that Jespersen's original petition was denied because there was insufficient evidence to justify revisiting the issues he raised, and that no comments had been filed on his petition.

The FCC said that it had revisited the structure of the amateur service on several occasions, the latest being in 1990, when the codeless Technician class license was established ''and the amateur community confirmed its preference of preserving telegraphy as an examination requirement for the remaining operator license classes.

''The amateur service community in the United States generally considers the current telegraphy speed requirements as necessary and appropriate,'' the FCC said.

328. Silence W1aw?

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-05 00:00:00 UTC
From: k0hb@hamlink.mn.org
Message-ID: <797094495.AA01073@hamlink.mn.org>
Source record: 249040

The FCC has assigned the file number RM-8626 to a petition by Frederick O. Maia, W5YI, that seeks to eliminate the rules that permit one-way information bulletins and Morse code practice in the amateur bands below 30 MHz. The effect of the petition would be to silence W1AW bulletin and code practice transmissions, among others.

Comments on the petition may be sent in the form of a letter to the Secretary, FCC, Washington, DC 20554. The file number, RM-8626, should be shown prominently at the top. An original and five copies are preferred, but single-copy comments will be accepted. A copy should also be sent to Mr. Maia's attorney, Raymond A. Kowalski, Keller and Heckman, 1001 G Street NW, Washington, DC 20001. The deadline for comments on the petition is May 4, 1995.

>low, I started the car and watched the volt meter on the dashboard climb
>up to normal voltage, but the echo remained. At the end of the QSO I was
>afraid my old Atlas 210 had developed an audio or recieve problem, so I
>tuned in several other CW stations. All sounded normal.

LE>Question: does this sound typical of the "delayed echo" sometimes
>observed on HF?

I have heard similar 'echos' on my own signal while running full-breakin
CW (QSK).

I don't think what we are hearing is as much a real "delayed echo" as
merely some backscattered signal... since the delay is generally quite
minimal.

Just a thought... and certainly NO scientific proof.

John-

On a serious note (some of my previous posts were a little outrageous on this thread): When I first got my HTX-202, I ran it for a short period (a week) on the cigarette lighter adapter WITHOUT a mag mount antenna. Soon thereafter, my Honda Civic's computer needed to be replaced. This cost upwards of $100. I have no way to prove that the two events are related, but it seems logical. Moral of the story: be careful when running the HTX-202 off car power without the proper antenna.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 05/2330Z APRIL 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 05 APRIL AND FORECAST FOR 06 APRIL - 08 APRIL

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 72/8

GOES satellite data for 04 Apr
Daily Proton Fluence >1 MeV: 6.5E+04
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 9.5E+06 (normal)
X-ray background: A2.1
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
06 Apr 07 Apr 08 Apr
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 06 Apr: 75/13

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to unsettled

Estimated Indices : A K Observed A Index 04 Apr
Learmonth 11 3233 3222
Fredericksburg 10 1
Planetary 8 3

Observed Kp for 04 Apr: 1011 1111
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
06 Apr 13 Quiet to unsettled
07 Apr 20 Unsettled to active
08 Apr 30 Active to minor storm
COMMENT: IPS Geomagnetic Warning 10 was issued on 5 April and is
current for interval 7-9 April.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
05 Apr normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
06 Apr normal normal fair
07 Apr normal fair poor
08 Apr fair poor poor

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
05 Apr 41 10 to 20% above predicted monthly values

Predicted Monthly T index for April: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
06 Apr 35 10 to 20% above predicted monthly values
07 Apr 35 10 to 20% above predicted monthly values
08 Apr 15 near predicted monthly values
COMMENT: Degraded HF comms expected 7-9 April.
Observed Townsville MUFs: Mostly near predicted monthly values.
Observed Hobart MUFs: 10-20% enhanced.

Hi,

Last day, I was wondering if there is a complete list of code
including this fews:

73: Friendly
88: *HUG*
50: wife/husband
44: daughter/son
51: handshake

Well, do you know it all... Does it exist all from 0 to 100 codes
like this or it just some old stuff... Is it really international code...
if I say 73's to a japanese on HF... will he understand that?

If there a list of that code please send it to me, I will
appreciate... My email is simard01@gel.ulaval.ca Any comments will be
welcome also....

73's (and let's see hmmmm...) 24's 69's 95's also !

Good question. I've considered doing the same thing. A number of
times I've seen cars with ham plates on them, and have wanted to call the
driver just to say `hello.'

One time I just simply honked `CQ.' The driver waved, but we never
spoke. I suppose I should have `honked' a local repeater frequency.

>

I had a QSO this past weekend with a guy in Oregon that uses a Timeware DSP. He said it filtered out all the noise. He said it makes SSB sound like FM. Can't verify it myself, but those were his claims.

He also said that he bought it from Ham Radio Outlet. They told him a lot of the MFJ units were being returned because people did not like them for one reason or another, but that people really liked the Timewave units. He was definately happy with his Timewave.

338. RM # ASSIGNED TO FCC PETITION AGAINST ONE WAY BROADCASTING.

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-05 00:00:00 UTC
From: ko4ta@mindspring.com
Message-ID: <ko4ta.210.001A5F0E@mindspring.com>
Source record: 249135

Finally the FCC has assigned an RM # to Fred Maia's Petition requesting the FCC outlaw one way broadcasting on HF. (Petition listed on the URL in my signature) Now everyone of us has the opportunity to do something about the problem.

I am asking you to please contact the FCC and show your support concerning the petition. Here are a few considerations so your comments have the most impact possible.

1. Send your comments to :

The Secretary
Federal Communications Commission (don't abbreviate)
Washington, DC. 20554

2. Type written comments only please

3. Make sure to place boldly at the top of every page "RM-8626" in large bold type.

4. Send letters only. No postcards, qsl cards and the like.

I am going to post this information on my web page as well so that after this message is gone we will still have the address handy to respond.

Please send your comments in and support this petition. If everyone will move on this we can have a solution to our problem soon.

Thanks....

Sincerely,
Don Simpson - ko4ta@mindspring.com

339. DUH! So THIS is why W5YI filed .....

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-05 00:00:00 UTC
From: marcbg@metronet.com
Message-ID: <marcbg-0504952049550001@net53.metronet.com>
Source record: 249136
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

Well, I was trying to figure out Fred's motivation for filing his wonderful petition for rulemaking to disallow general scheduled bulletins below 30 KHz, when I received the ARRL letter, and there, in black and white, was the most obvious reason at all (quoted from the ARRL Newsletter):

"W5YI petition would silence W1AW"
"A petition for rule making filed with the FCC would eliminate all one-way transmissions such as code practice and information bulletins on the amateur bands below 30 MHz, including those from W1AW."

Now it makes sense. Or, am I too much the cynic?

Well, maybe too cynical, remember, that many other madmen, er, hams are now "broadcasting" on "their" announced frequencies without regard for the QSO's that may be in progress. I suspect Fred's motivation is to make the HF bands a little easier to deal with by making everyone subject to the rule that you are not to squash a QSO in progress, or to just keep certain frequencies occupied for long lengths of time. Maybe too optimistic?

I wouldn't miss all the broadcasts on HF, personally, and actually do believe that VHF / UHF is more appropriate (more local in scope) for such stuff.

Source record: 249138

Greetings fellow amateurs!! My son, AJ (VE6YIC) passed his basic exam last summer at the age of 8 years, 10 months. Does anyone know of a Canadian ham who was licensed at a younger age?

For those of you unfamiliar with the Canadian licensing procedure, there are only 2 written elements - the Basic, which contains 100 multiple choice questions on electronics, block diagrams, antennas & propagation, regs, operating procedures, Q codes et al. The basic allows you on VHF, all you need to get on HF (full privileges) is CW. The advanced written exam only gives you 3 additional privileges - higher power, sponsor a club and/or a repeater, and build some of your own equipment. I think the Basic Canadian is about equivalent to an Advanced American (once CW is passed).

He's working on CW now, and hopes to get on HF this summer. He's interested in meeting other young hams - maybe you know someone who's interested?

A few monthes ago I saw a ham driving around Indianapolis (IN) with a
bumper sticker reading:

Simplex
146.55

So I switch to 146.55 simplex on my htx-202 contacted him. I asked him
about the bumper sticker. He said he got it at a Hamfest near Chicago.

Seemed like a good idea to me. Wish I knew where to get one.

73s,
Mike

345. Re: How to ring telephone

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-05 00:00:00 UTC
From: wb8foz@netcom.com
Message-ID: <wb8fozD6KFG5.A6B@netcom.com>
Source record: 249142

To make 20/30 hz you have several options:

1) Buy an old telco keysystem power supply at a hamfest. Many had local ringing output.

2) Steal the very clever designs of CP Stocker & build a "Subcycle" magnetic 60-20 hz converter. This may take a while......

3) Use a 555 oscillator to drive some decent switching semiconductors. Extra credit if you can do it with SCR's in a jones circuit.

4) Find a magneto in a army field phone -- crank away.

5) Invent something new......

Of these, #1 is easiest & cheapest, I bet....

346. Locating Old Callsigns

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-05 00:00:00 UTC
From: lakeith@robins.af.mil
Message-ID: <3lu8o3$go@wrdis02.robins.af.mil>
Source record: 249143

A local ham is trying to determine the callsign held by his deceased father, William J. Shaw, Jr. The call was held from 1945 to 1950 and we are fairly sure that it was a W4....

Would anyone have an old callbook from that era and be willing to copy the 4-call area pages so that he could do a manual search?

If you can help, please reply to barrosajb@robins-eccfe.robins.af.mil.

Thanks and 73,

Larry Keith, KQ4BY

>AND A BIG NASTY HEATSINK
>

Looked at this radio at the Cincinnati ARRL Convention in February. All I can say is what a piece of junk. Just another high priced poorly constructed rig built in Korea. There are so many quality built rigs in the same, if not lower, price range.

To the rat shack folks, the world does not need another 2 meter rig. If you really wanted to make an impact, bring out a 220, 440, 6 meter, or something unique and different. Build the radio in the U.S. or Japan so we can see some quality.

All I keep hearing from folks on the net is how many times they had to return their defective Radio Shack handhelds. Let's see some quality and uniqueness!

Some time ago I too purchased a used FT-11R; in fact, I bought it from someone on the net. I've owned dozens of different HT's since the late 70s, and the FT-11R is by far my favorite to date. I use the alkaline battery pack exclusively with this rig.

Well, Hans, I sort of see it this way: Anything that lasts a very
long time and makes a significant impact on Mankind's history deserves
to be remembered in some way; after all, it is always useful to know
where we've been as well as where we're going, if for no other reason
than to tell how far we've come.

Would you like to help us out in a long-term effort to create some
kind of historical "monument" to radiotelegraphy? If so, drop me an e-mail
and I'll add you to the electronic "mailing list." No plans yet, just
sounding out interest, and if we get something going you can participate
as much or as little as you like.

And the same goes for anyone else reading this post.

73 DE K4MSG

Paul H. Bock, Jr. (ETCM, USNR-RET)

P.S. BTW Hans, were you ever at NAVCOMMSTA Morocco? I was there in
1969-71 as a WO-1 & CWO-2 (Receivers Officer, OIC ATCU-10, and Assistant
EMO, in that order).

From: c_prewitt@emulex.COM
Message-ID: <2F82AA00@msgate.emulex.com>
Source record: 249154

:David R. Brooks said:
:Australia is proposing to introduce a "Spectrum Access Tax", as a
:surcharge to amateur licence fees. Sample (proposed) structure:

: Unrestricted licence renewal: $25
>: Spectrum maintenance charge: $ 9<
: Spectrum access tax (new): $35
: -----
: Total annual renewal: $69

:David R. Brooks <daveb@perth.DIALix.oz.au> Tel/fax. +61 9 434 4280

I am sure that if Australia could maintain the spectrum, clean up after a solar flair, they could get $ 9 from almost all of the amateurs world wide and you wouldn't need any other fees! :-)

I'm working on 20wpm now, having recently passed 13wpm. I've found an interesting phenomena that I don't recall seeing mentioned, in that as I get faster, the lower speeds seem slower. Once upon a time, 5 wpm was fast, now it seems interminable. At this time, 13wpm seems pretty slow, much slower then it did a couple of months ago.
Is this so common no one has metioned it, or is it unusual?

I'm not the one that decided that 145.000 should be the one everyone uses!
In fact, I just talked to a Georgia Piker passing thru, and he monitors
145.000 also.

My packet station sits on 145.01 24 hours per day and I never have a problem
with it. Besides, packet is not supposed to start till you get to 145.10
anyhow...

If you want to get the ARRL involved, they have determined that 144.90 thru
145.10 is for Weak Signal and FM Simplex, so go complain to them for what
THEY STARTED...

Probably the reason that 145.000 got started as the Highway Simplex
frequency in the first place, is that no one, but no one, is on 146.520.

Anyway, when pikers get into a town, they usually look for an active
repeater, if they don't find one, they switch back to the Highway Simples
Frequency of 145.000.

TTUL - 73+ de Gary - N0ZOI @ K0PFX.#STL.MO.USA.NA

145.10 is for Week Signal FM Simplex

360. Ignition noise, S10 Blazer

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-05 00:00:00 UTC
From: scurrie@VNET.IBM.COM
Message-ID: <199504051633.LAA04463@mail.cs.utexas.edu>
Source record: 249157

Greetings all,
I installed my TS-140 in my 1989 S10 Blazer last night, and will be using it mob
ile
for a while. I was rather disappointed by the amount of ignition noise that
is generated by the engine. I have the 4.3L V-6, and at freeway speeds on
40m the noise is about 10 over--much more than the noise blanker can handle.
It sounds like high voltage noise to me, it is impulse type noise that changes
with both engine speed and loading. The engine has resistor plugs and wires
already and the hood is grounded. I'm not sure where to go from here. This
could also be the fuel injectors I suppose. It is throttle-body injection ans
has two injectors the cycle very fast.

I would appreciate hearing from anyone that has had success reducing noise
from this type of vehicle.

I don't check the group too often, so please send replies direct....

Regards,

The ISD1002 (?) chip is on sale NOW at Radio Shack for like $12.99.
It stores and replays up to 20 secs of speech in an analog memory for up to
10 years. It requires only a handful of peripheral parts and 5V to run.
I built up a voice keyer from one a few months ago in a couple of hours.
This would work very nicely in this app too, along with maybe a 555 timer?

If $13 is too rich, see the article in this months QST on using a talking
greeting card for this!

>73, doug

Doug, I experience the same thing. I can copy solid at 20, but
I have a little trouble with the traffic nets which run at 22-25 WPM
(like the VN; just a tad too fast for me). So, a few days ago I thought
"well, I'll just try checking into the Maryland Slow Net until I get
used to the protocol, then tackle one of the regular nets." But when
MSN started, it was so S-L-O-W (around 5 WPM, I'd guess) that I didn't
have the patience to sit through the check-in procedure; I had a distinct
feeling of "wasting time" which is bad, because I only felt that way
because the code was so slow. I'm sure a 40 WPM operator feels the
same way if he/she tries to copy, say, the W1AW CW bulletins at 18 WPM.

So, my guess is that it's a common phenomenon, although I will say
that if I call CQ and someone comes back slower (even a lot slower) I'll
switch off the bug to the straight key and go ahead with the QSO (never
ignore a response to a CQ, regardless of the respondent's speed).

73,

Paul, K4MSG

1st- congrats!
2nd- the last group in our area to pass exams: Exam passed 3/19, VEC packet mailed to W5YI 3/21, FCC mailed licenses 3/29, USPS into mailboxes 3/31. So our last experience was 13 days from test to green-wallpaper.

This included 2 upgrades (myself included- toot, toot my horn) as well as 5 new licenses. The turnaround time is the same.

Makes one wonder... Could all of the Fed work as efficiently if modern computer acquisitions would proceed faster than the technology becomes obsolete? Considering the FDA started in 1983 on a new mainframe (where a LAn would be better suited today), when they finally finished the appropriation and bidding processes in 1991 the computer they bidded on was obsolete (no longer made) and so was the replacement to it.

Aw well, its a hell of a lot easier to bitch and destroy than to help and improve the way things work.

QST de W1AW
ARRL Bulletin 34 ARLB034
From ARRL Headquarters
Newington CT April 5, 1995
To all radio amateurs

SB QST ARL ARLB034
ARLB034 Petition threatens W1AW

A petition for rule making before the FCC would eliminate all one-way transmissions such as code practice and information bulletins on the amateur bands below 30 MHz, including those from W1AW.

The FCC has assigned file number RM-8626 to the petition, which was filed by Frederick O. Maia, W5YI, publisher of the commercial newsletter the W5YI Report. The petition seeks to eliminate the rules that permit one-way information bulletins and Morse code practice in the amateur bands below 30 MHz. The effect of the petition would be to silence W1AW bulletin and code practice transmissions, among others.

Maia calls the FCC rule that permits certain one-way transmissions on the amateur bands ''a very permissive category and taken in its broadest context, permits just about anything to be transmitted that is even remotely associated with the Amateur Service.''

Maia says that code practice is now available on computer software, and information bulletins about Amateur Radio can be had on various computer on-line services.

Comments on the petition may be sent in the form of a letter to the Secretary, FCC, Washington, DC 20554. The file number, RM-8626, should be shown prominently at the top. An original and five copies is preferred, but single copy comments will be accepted.

A copy should also be sent to Mr. Maia's lawyer, Raymond A. Kowalski, Keller and Heckman, 1001 G Street NW, Washington, DC 20001. The deadline for comments on the petition is May 4, 1995.

From: neil_fullagar@ccgate.apl.COM
Message-ID: <9503057971.AA797109383@ccgate.apl.com>
Source record: 249171

I have a 742A (2 meter and 440 mobile) which I like very much. Until recently, there was just one thing about it that bugged me, slightly, which was that I had inadvertently store a frequency pair in slot 1 of the 440 unit which I wanted to delete (not replace, delete, as I was trying to keep the assignments on my TM742 - which has has about 80 slots per band - consistent with those on my TH79 - which has 82 total, shared between bands.) Unfortunately, slot 1 can only be cleared by a full memory reset. With me so far?

Well, last week while fumble-fingeredly trying to set the 742 in cross-band repeat I entered some other key sequence with makes it go "b-b-beep!" every time I push the PTT. It works fine, but it drives me bonkers. I know how to turn the volume of ALL beeps to zero but there are beeps I do want to be audible. Kenwood tech support had only two suggestions: Repeat the exact key sequence, which should undo it (but I have no idea what the exact key sequence was, or I would have done that before calling them) or do a full memory reset. Any of course I don't really want to have to re-enter everything. SO... anybody got any other ideas?

1. Four N's is a standard sequence for shuting off the input to printers.

2. In RATT, Radio Teletype, services (and others), when the receiver starts picking up noise, it (get this!) prints the random noise. So SelCals (selective calling units) were developed and they eliminated an operator from manually turning on and off the printer as they listened to the circuit. They also were programmed with your call and other identifiers you wished to turn them on; and, a sequence of letters that don't happen with very much frequency to turn them off - four N's.

3. RATT is still a viable mode.

4. Call letters, as far as I know, don't have 4 N's in sequence, maybe three - like KA0NNN or NNN2548; but, not 4.

5. If you accidentally used NNNN

This is a good question. I don't see anyplace use the KP6 prefix and do
not know if any place has it allocated. I know that the KG prefix has
been reserved with some numbers such as 4 for Guantanimo Naval Station
Cuba, and KG6 was once Guam but they have issued KG calls in other
districts such as 2,7,8,9 and 0.

Well they have skipped KG, KH, KL, and KP in 4 land so far. We're 75%
through with the KS4 series here already. I was issued KR4YL last August
only. 6 land isn't too far behind.

Gary Coffman (gary@ke4zv.atl.ga.us) recently wrote
in <1995Apr4.133803.388@ke4zv.atl.ga.us>:

: Given that there'd be no difference in the filing between a regular
: amateur license and a special repeater license, why in the world
: do you want hams to have to do that? Isn't their ordinary call sign
: sufficient identification? I'd think it would just add confusion to
: have one person with several different calls.

Perhaps Joe, and other locally recognized frequency coordinators, would like to see a mechanism in place to signify the local coordination and the entry in the single point of contact data base. Those amateur stations in repeater service that are coordinated would be able to sign with their distinctive repeater station callsign. Those repeater stations in the testing phase of coordination would sign their trustees callsign.

FWIW - I took the test Mar 21, call sign issued Mar 28. I called the 800 number on the 31st to get the status and received the license the next day (April 1st of all days) It took a few minutes to get through on the 800 number, but once I was through, it took maybe 15 seconds to get my call. Painless. The VE told me NOT to call the FCC unless I hadn't heard after 90 days. Anyone know why?

Source record: 249205
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.swap

Greetings,

After years of waiting for a location and opportunity to put up my
Diamond dual band base antenna, I have a chance in about 1.5 weeks
to do so.

Unfortunately, during my move I lost the 2 or 3 pages of instructions
for putting up this antenna. This model maybe similar to the X-510NA
but I'm not sure. I do know from visual inspection I have the 'N'
connector fitting.

If anybody out there has instructions for this 3 year old model from
Diamond, I would greatly appreciate a clear, clean copy of it. Please
email me for my US Postal address so I know you're sending it and we
can work out the fees (hopefully not more than $3.00)

Thanks in advance & 73's
- Cliff

>
>I'm looking for advise on what kind of a 40-80 meter antenna I can put
>up. I want it to be wire, I have over 2 acres to do the job in....

I'm not sure what kind of budget you have to spend on an antenna, so I'll
keep it simple. I have had excellent results with the Center Fed Zepp
design. Basically, this antenna is a dipole cut for the middle of the
40m band (about 66 feet). The difference is that it is fed with Ladder
line all the way into the shack, which also radiates a portion of your
signal (unlike a conventional dipole). The antenna requires an antenna
tuner, but any decent tuner will do the job.

I have worked a lot of DX with this antenna, and have worked Siberia
using only 50 watts.

Good Luck & 73s

Ron

I hate to agree with a "negative" post, but it's true. Ham radio is
a rich man's hobby to begin with. I _do_ operate contests for DX,
but not for the score. I'd also like to see a "successful" contester
who can run 10K in under an hour. You need a real comfy chair for
the long haul.

And if you think contesting on a budget is bad, try working an AMSAT
(non-Russian) satellite without $1000 worth of specialized gear!

: The manufacturer must certify Part 15 compliance at time of sale, but
: the user is NOT responsible for maintaining that compliance, any more
: than the user of a PC is responsible for retesting his PC if he
: modifies it or adds a card.

True, indeed, but the user is still required to operate the device in such a manner that it does not cause interference to other radio services. So, if your neighbor adds a modem to his or her computer and the computer now interferes with your favorite HF spot, Part 15 requires that the neighbor take whatever steps are necessary to eliminate the interference.

In practice, this is doesn't usually work out very well.

Also, the FCC normally would not consider merely hearing a birdie from the computer to be harmful interference.

>kept track I would appreciate your input. On sale the thing
>is less than half the price of a Kenwood CW filter.
>
>Opinions good or bad are welcome. Tnx de Jerry

I my opinion it is good value for those who need it. It features are:

1. sharp passband filters (useful for rigs with hum and/or hiss)

2. perfect heterodyne removal

3. sharp CW filters but with some distortion. Day and night
difference for rigs without the CW filter, less so
otherwise

4. built-in speaker

I believe the distortions are a result of the 8-bit design. No one can
expect 16-bit for $80.

Heh...

Y'all have the right idea. :)

We have a segment of hams here in town that operate on some repeaters who operate in nothing more than strict roundtable formation, make long commentary, say nothing in as many words as possible. On the 442.15 (and 145.21) repeater, (the "Riff Raff" repeater, as it has come to be known--we carry the name proudly) we call this sort of operation "I-mode" (I for Inocuous). A typical I-mode session goes something like this:

Well, OK. WB5TXW and the group, this is KB5ELV. Fine business there George. We're just here riding the bus on our way home there, and it's taking a long time there, George. The traffic here is really backed up there. Hi hi. Fine business on going to work there and having lunch with the xyl there. We had lunch this afternoon. We put in a long day at work there, George, and we're glad that the day is over there. Hi hi. And fine business there Hugo on going to school. We went to school once a long time ago, and OK on the paper. We're sure you'll do fine on it there, Hugo. Well, on over to you there, Geoff, go ahead and pick it up there. N5SBF and the group, this is KB5ELV.

Rules for I-Mode:
You must refer to yourself in the plural.
Use plenty of excess prepositions. (There and here, for example).
Operate in strict roundtable; pick it up from one person and turn it over to another person, the same person each time in the rotation. Or, the same people who talk before you do will always talk before you, and those after you will always be after you.
Be sure to say "OK on", "fine business on", and so forth.
Never laugh. Use "Hi hi" instead.
Use silly words like "destinated".
Talk about the weather, the traffic, and your day at work.
Never ever disagree with anyone.
Say as little as possible in as many words as you can. (Most important.)

There are other rules as well, but these are the ones I can think of. It has become a game of sorts with us on .15, and I've become quite good at it, actually. :)

Seriously though, there are lots of fun hams on the air who will talk politics, technical, computers, or whatever you like with you. You just have to get past all the I-mode folks.

Have fun!...

For those who may not have heard, Radio Shack has a new 2 meter mobile radio hitting the stores! I just got one, and it is a very nice radio.

Radio Shack is to be congratulated for allowing hams to help them design this one. It has alot of nice features, and doesn't require a six week class to learn how to use. It also has expanded receive coverage. It is obviuos they really tried to design a radio easy enough for new-comers, and yet sophisticated enough for us old-timers. I am very satis-fied, and encourage you to check it out. I understand the radio is made by ICOM, but the Radio Shack folks have been reminded (by memo) NOT to discuss that fact with customers.

Check it out and let all of us know what you think!!

Hi John: There seems to be a contradiction between these two paragraphs.
How can the majority be ``trucks, trailers and medicaid'' types, but
at the same time ``the talk was always technical''?

One would think that a repeater in which the talk was always technical
would be a sought-after machine. I guess some in this new generation of
hams aren't interested in the technical side of the hobby. How sad.

>73, Jeff - AC4ZO

I have to agree with Jeff. When I did the code for my General about 3
years ago, I couldn't believe how easy it was to answer the multiple-choice
questions. With only 2 or 3 of the letters in a five letter word, I could
guess the word, and get the question right. Now, I haven't done any code
since, and probably couldn't copy _1_ wpm! :-)
But seriously, multiple choice is never a good way to test for knowledge of
a subject, not when it's real easy to eliminate most of the answers right
away.

GC>I personaly disagree with a lot of the league's policy but I agree with a
GC>lot of it too. IMHO they are a net positive force for ham radio.

GC>Gordon AB5DG

Gordon, I beg to differ. I also LIKE the ARRL a lot and am a member, BUT
if someone doesn't like it the way it is, they have another valid
recourse, and that is to start another organization like IARN, RAIN,
W5YI or whatever they want to call it.

What makes me think of this is that you cannot guarantee to always
be able to fix something from the inside if it gets far enough off
course. I happen to think that ARRL is mostly doing a great job, but
others may not feel that way.

I was a high school teacher for 3 years in the 1970s and joined the
NEA. All but a handful of the 130 or so teachers in our school
belonged to the NEA. I gradually found out that the NEA had a social
and political agenda that had VERY little to do with education, and more
to do with promoting socialism and moral relativism than I was
comfortable with. Rather than trying to change NEA, I opted out with
the few dissenters at my school. Sometimes an organization needs to
be overhauled. Other times it needs to die. I agree with what you said,

but the ARRL is not a god that has some unlimited power that we
have tojust join up and improve. If someone wants to start a similar
organization, they should have every right to.

I hope that ARRL will continue to be so good that almost no one will
want to start something else, but again, if they do, I hope we don't see
League members trying to mimic the lawyers and politicians and start
becoming saboteurs, whether for or against the League!

Yours for the best fraternity in the world, Amateur Radio.

I agree that hiding certain forms of language from women for fear that they might swoon away and become psychologically damaged from hearing them is rather archaic and sexist. However, your use of profanity does not make any point, but serves to humiliate you by suggesting that you cannot mount any argument against this form of sexism. It only insults the poor misguided person who posted it.

ATTENTION:

Everyone who thinks that this thread has no place on their newsgroup might take the time to look at the Distribution List (Followups) at the top and remove their group from that list instead of complaining.

I bought one too.
Actually the Tropez which is manuf for ATT phone (so the Tropez girl sez).
My friend has one out in the burbs and gets almost half a mile.
I'm two miles line of site from a 25watt (true, not erp) 900MHz
transmitter.
I get about 50 feet on a good day.
On a bad day it's unusable.

In my last posting, I announced the availability of the FCC callsign database via the Internet.

Since that posting, I have found one (tiny) correction to the information provided.

Thanks to Bart Jahnke, KB9NM (ARRL VEC Manager) for the following information:

And I quote:

"Be aware that, if you do attempt to access the FCC FTP site and download files from the specified directory, the directory name is case sensitive. That is, the directory case must read:

pub/XFS_AlphaTest/amateur

If you use only lower case characters, you'll get a directory not found reply."

Heath, the microprocessor in the radio will support those frequencies,
but the RF hardware isn't there to actually receive over such a wide
span. Manufacturers save a bit of money by using generic microprocessors
that may also wind up in scanners or in radios for other ranges. That
doesn't mean that your particular radio has the RF hardware to take
advantage of that.

Come see the NEW lights in the garage...

********* $1 buyers discount with hardcopy of this notice ********

Spring as sprung so it is time for the seasons first

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS

FLEA all SUMMER at MIT
April 16th, 1995
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >1000 cars!

Buyers admission is $2 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $10.00-each at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

!! RAIN or SHINE !! Have no fear of rain, a covered
tailgate area is available for all sellers (6'8" clearance).

Talk-in: 146.52 and W1XM/R-449.725/444.725 (PL 114.8/2A).

Sponsors: MIT Electronics Research Society
MIT UHF Repeater Association (W1XM)
MIT Radio Society (W1MX)
Harvard Wireless Club (W1AF)

The FCC is responsible. Also we monitor ch16, and have an agreement with
the FCC to prosecute interference cases we can identify. Unfortunately
there's not much you can do unless you can DF on the signal and find its
source. Neither we nor the FCC have DF, excepted in a a few small
areas. Interference on ch16 is common, and can be quite a problem.

423. Re: How much power is enough?

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-06 00:00:00 UTC
From: wrt@eskimo.com
Message-ID: <D6LEH7.BBB@eskimo.com>
Source record: 249061

I tried to post this response a few days ago and had some kind of malfunction in the editor, so please bear with me if you get it twice:

Regarding how much power is enough...

A couple of days ago a friend was over while the 3D2 Conway reef expedition was on 14195, about two hours after local sunset. There wasn't much of a pileup, so he was listening just 14200, not the usual 5-10 kHz spread. We got into a discussion of how much power it would take to work him, so we decided to experiment. My friend KD7LS is definitely a low power and dipole kind of guy. I like the KW and beam approach, so reputations were at stake here. We intially called him with 10 watts PEP for about 10 minutes with no luck. He was calling CQ a lot with no answers, so we felt QRM was not a problem, and we were hearing almost nothing on 14200. Bryan reluctantly agreed to up the ante to 50 watts, but another 10 minutes of calling got the same results - nothing. The 3D2 was a solid S5 to S7 all this time, so the band was in reasonable shape. I was getting a little antsy now, so I started warming up the linear, but I left it in standby. Seeing that I was about to pour it on, Bryan kicked up the power to 100 watts and got him on the first call.

So what's the moral of the story? We've all heard it a zillion times that a 3dB increase is only half an S-unit and therefore not worth bothering with. I respectfully disagree. If you're already 10 over 9, sure. But if you're right at the noise threshold where the other guy just can't quite copy you, 3dB can make all the difference. I've seen it over and over again.

So how much power is enough? Whatever it takes to get above the noise and QRM. One watt? 1500 watts? Yes and yes. 'Nuff said.

73, Bill W7LZP

More likely it represents SMA's understanding that CB'ers, in Australia as in the United States, would be (a) unlikely to pay and (b) the cost of attempting to enforce a CB-fee would be much more than the revenues such an effort generated.

As I understand it, your SMA, like our FCC, is relatively un-political.. or, at least bi-partisan political (i.e. no more than two of the three FCC commissioners may be of the same political party), and that tends to negate any sharp swings to the left or right as governments come and go. Izzat a correct understanding?

426. Digest of Articles - QST Mar 95 (Long - 41k)

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-06 00:00:00 UTC
From: wvanho@infinet.com
Message-ID: <3m0dng$e1g@horus.infinet.com>
Source record: 249064
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

DIGEST OF ARTICLES - QST March, 1995

Following are digests of articles printed in the March, 1995 issue of QST. Such digests are being prepared for each issue of QST, and posted periodically.

It is hoped that other hams will volunteer to post similar digests of the other ham technical publications such as QEX, CQ, 73, COMMUNICATIONS QUARTERLY, RTTY JOURNAL, et al. Especially desirable would be digests of publications in other countries, such as the RSGB RADIO COMMUNICATIONS and ham magazines in Europe, Japan, Australia, and other countries around the world. We English speakers would especially enjoy them if they were translated into our language, but they would also be valuable additions to the world's knowledge if they were posted in the language of origin. Who knows? Some bi-lingual ham somewhere might translate them into English and re-post them.

Worldwide communications are getting better and better. The time has come to make the world's ham press available to all hams throughout the world!

The major value of digests is to give readers sufficient information to decide whether to obtain a copy of the full text. If any U.S. reader wants a copy of an article in QST, please inquire of other hams in your own neighborhood. Many have collections of back issues. Anyone who is unsuccessful in finding a fellow ham with a collection should try every library in the area, especially those at universities and technical colleges. If all else fails, a copy can be obtained from the ARRL Technical Department, 225 Main St., Newington, CT 06111-1494 USA for a fee of $3.00 per copy. Remember, it is both cheaper and quicker to obtain one locally.

Readers in most other countries can obtain copies from their own national ham organizations, sometimes translated into their own languages.

TECHNICAL ARTICLES (TA)

Title>TA1:A "Rope Ladder" 2-Meter Quagi
Author>Ford, Jim - N6JF
Source>QST Mar 95, pp. 25-27
Abstract>Describes a 35-element 2-meter Quagi beam. Elements are held on 2 parallel ropes, 100-feet long, stretched between posts. Measured gain is 20.6-dBd.

Digest>This article is a description of 35-element 2-meter quagi antenna. Its equivalent boom length is 100-feet (30.5-m.), but there is no boom; instead, the quad driven element, the quad reflector, and the 33 rod-type directors are all supported on two ropes stretched between posts.

The author constructed the antenna for temporary use, but it could easily be permanently installed. In designing the antenna, he started with the element dimensions shown for an 8-element quagi described in the ARRL Antenna Book. Then he added 27 more directors, cutting them 1/16-inch (1.5-mm.) shorter than the shortest one shown in the book, and spacing them the same as in that antenna.

The performance of the long antenna is exceptional; the gain was measured as 20.6-dB! This represents more than 100:1 power gain. It would be an excellent antenna for any point-to-point communication problem, such as accessing a very distant repeater.

Title>TA2:An Audio Break-Out Box
Author>Spencer, Ben C. - G4YNM
Source>QST Mar 95, pp. 28-29
Abstract>Build a box with single, high-impedance input and 5 outputs, four of which have high impedance and one low impedance.

Digest>A audio break-out box allows one to feed a single input signal to a number of different loads. For example, a receiver output can be connected simultaneously to a TNC, an external digital signal processor (DSP), and a loudspeaker, with separate gain controls for each output, adjustable from 0- to 20-dB.

The unit designed by G4YNM uses a quad op-amp to provide four high-impedance outputs, and an audio power amplifier to provide one low-impedance power output. The entire system is built on a single circuit board and requires a 12-volt d.c. supply. An etched and drilled PC-board is available from FAR Circuits, 18N640 Field Ct., Dundee, IL for $7.50, including domestic shipping.

Title>TA3:A High-Performance Hybrid Frequency Synthesizer
Author>Rohde, Ulrich L. - KA2WEU
Source>QST Mar 95, pp. 30-38
Abstract>Description of PLLs and DDSs used in frequency synthesizers. Suggests a hybrid design of PLL for coarse, and DDS for fine, adjustments.

Digest>This is the latest of a series of articles by Dr. Rohde that have been published in QST describing and analyzing various aspects of modern receiver design. The author is a recognized expert in receiver design, in general, and frequency synthesizers, in particular. Among his many publications is a text: DIGITAL PLL FREQUENCY SYNTHESIZERS - THEORY AND DESIGN, published by Prentiss-Hall, Inc., 1983.

This article is a guide to design, not a construction article. It will be a valuable guide for a reader who is directly involved in designing receivers and who is quite familiar with state-of-the-art practices in phase-locked loops (PLLs) and direct-digital synthesizers (DDSs). It illustrates what can be accomplished using presently available integrated circuits (ICs), greatly simplifying and economizing high-performance synthesizers for MF, HF and VHF use.

However, the author makes no compromises for the benefit of readers whose understanding and familiarity with PLLs and DDSs are hazy, at best. If such readers want to understand thoroughly the lessons that this article teaches, they should review other texts about PLL, DDS, and phase noise. A good place to start is recent editions of the ARRL Handbook. In addition, it would be very helpful to have data sheets describing the various integrated circuits that are used and shown on block diagrams in this article, but not otherwise described.

The most important performance characteristics of synthesizers are (1) stability, (2) resolution, (3) settling time, (4) phase noise, and (5) spurious outputs. Stability is obtained from that of the crystal-controlled reference oscillator. The other characteristics are all affected by design decisions involved in the selection of multi-PLLs or DDSs. To some extent there are trade-offs between resolution and settling time.

The author points out that by using multi-loop PLLs, designers can obtain very small-step resolution which is indistinguishable from that of a continuously-variable tuned oscillator. But this approach can result in an objectionally long settling time. He makes a persuasive case that a hybrid system using a single PLL for coarse adjustment in steps of tens or hundreds of KHz., combined with a DDS for fine tuning steps, can provide optimum performance.

The rest of the article describes, in block-diagram form, a hybrid system that provides excellent performance and uses relatively inexpensive, commonly available components. Included are test results in the form of chart records of phase noise and spectral purity compared with other, much more expensive synthesizers.

Title>TA4:Try Building Your Own Equipment
Author>Diana, Gary M., Sr. - N2JGU
Source>QST Mar 95, pp. 39-42
Abstract>Presents the case for amateurs to build their own equipment.

Digest>N2JGU makes a very good case for the pleasure that an amateur can get from building and operating a piece of his own radio equipment. His first construction project was putting together a kit. Next, he decided to build a QRP 40-meter CW transceiver, called "The Ugly Weekender", that had been described in QST Aug 81. He obtained an etched and drilled PC-board that was clearly marked with identification for each component, bought a set of components per the parts list, assembled them onto the board and soldered them. But when he applied power, the unit did not work. At the point, he had learned his first lesson: Assemble a complex board a little at a time, testing each subsection before going on to the next.

After considerable frustration, he finally discovered that one of the components, a bypass capacitor, was faulty. When he replaced it with a good one, the system worked. This was his second lesson: Never assume that a component is good, even though it is new.

After his second board was finished and operating, he was unable to find an enclosure that he liked so he made his own from pieces of single-sided, undrilled PC-board material. He made a rectangular box keeping the copper face on the inside, assembled the box and soldered the edges of the four sides and the bottom. To provide a removable lid, he attached threaded stand-offs in each of the four corners, held in place with hot-melt glue. Then he cut the top to size and drilled matching holes at the four corners so that the lid can be screwed in place.

Since his initial succeses, N2JGU has built a number of pieces of QRP gear using the same construction techniques. A photograph with the article illustrates the attractive final results.

PRODUCT REVIEW (PR)
Conductor: Mark Wilson - AA2Z
Editor, QST

Title>ICOM IC-820H VHF/UHF Multimode Transceiver
Author>Ford, Steve - WB8IMY
Source>QST Mar 95, pp. 80-83
Abstract>Review of operation of the IC-820H transceiver, recommended for all uses except satellite operations.

Digest>The IC-820H is a dual-band (144/430-MHz.) rig designed for home station use. It operates in FM, CW, SSB and packet modes. Physically, it is very small, less than 10- x 10- x 4-inches (25- x 25- x 10-cm.), weighing 11-pounds (5-kg.), not including power supply. It contains two VFOs for each band and allows either to be selected as the main band, with the other becoming the sub-band; it will both transmit and receive on the main band, but only receive on the sub-band. The reviewer found its performance in terrestial use to be excellent in practically all respects. It really shone in terrestial packet at 9600-bits/s.

For satellite operations, the IC-820H has some very good features, and some that are not so good. One feature is useful when one is using the SSB and CW transponders on Oscars 13 and 20. When one is tuning the band looking for contacts, the change of frequency on the main band causes an exactly corresponding change on the sub-band. This is fine at the beginning of a QSO, but soon Doppler shift requires a change to the transmit frequency without changing the receive frequency, or vice versa. The procedure for doing so is so awkward that the reviewer was unable to use it and fell back on two totally independent frequency dials.

When he tried operating satellite packet at 1200-bits/s, he found it impossible to follow the Doppler shift without losing data and the throughput suffered greatly.

The worst problem occured when he tried to use 9600-bits/s packet. He soon discovered that operating in that mode required that a number of obscure switches be set in a combination that caused the received audio to be cut off. The rig would not operate! A modification to the rig was devised by G3RUH that partially overcomes the problem and makes it possible to operate with the 9600 bits/s Oscars 23 and 25. However, any operator who is seriously interested in satellite operations will probably want to investigate other rigs.

The manufacturer's list price for the IC-820H is $1999. The matching power supply is $345 and the hand-held microphone with built-in key pad is $82.

Title>PR2:Azden AZ-61 6-Meter FM Hand-Held Transceiver
Author>Ford, Steve - WB8IMY
Source>QST Mar 95, pp. 83-85
Abstract>Review of an excellent 6-meter hand-held transceiver.

Digest>The AZ-61 is a hand-held rig very similar to the same company's 2-meter rig, the AZ-21A. It is small, weighs 1.2-pounds (0.55-kg.) including battery pack, and rugged. Unique for amateur equipment, it carries a 2-year warranty.

Six-meter repeaters are becoming more and more popular because of the congestion on 2-meters in many areas. The band has the added advantage that, a few years from now when the next sunspot cycle is in its rising phase, DX contacts will become possible with QRP equipment, such as this HT.

The rig's power output can be switched from 0.5- to 5-watts, which makes it capable of accessing rather distant repeaters. It is designed to provide a repeater offset of 500-Hz., which conforms to the most recent ARRL band plan. However, many existing repeaters have not yet changed over from the former standard split of 1.0-MHz. and the AZ-61 cannot be reprogrammed to that split. This limitation, though annoying, can easily be overcome. One only needs to program a memory channel to accommodate any repeater that is still using the old standard.

The manufacturer's recommended list price is $379.

Title>PR3:Dunestar Model 600 Multiband Bandpass Filter
Author>Straw, R. Dean - N6BV
Source>QST Mar 95, pp. 85-86
Abstract>Operation review of a bandpass filter for transmit/receive use at a multiple-transmitter site, to avoid mutual interference.

Digest>The Dunestar 600 is an in-line filter that works on both transmit and receive. It covers all bands from 160- to 10-meters, but not including the WARC bands. It is bandswitched electrically by remote control.

The unit is designed for use at a multi-transmitter site, such as a Field Day, contest, or emergency operation, to prevent interference from and to other nearby transmitters.

The filter is rated at 200-watts output, intermittent duty. The reviewer found that that rating is perhaps over-reaching; operating 200-watts with a 40-percent duty cycle for 10-minutes destroyed one or more of its capacitors. A more conservative rating would be more like 100- to 125-watts.

The unit was subjected to a number of different tests and its performance was excellent with all of them. It successfully reduced crossband interference to such an extent that there was no noticeable effect on weak signal reception, except when the receiver was tuned to a harmonic of the interfering transmitter.

The manufacturer's list price is $229.

TECHNICAL CORRESPONDENCE (TC)
Conductor: Paul Pagel - N1FB
Associate Technical Editor

Title>TC1:Receiver Design Comments
Author>Sabin, William E. - W0IYH
Source>QST Mar 95, p. 72
Abstract>Supplementary information to article by Rohde in QST Jun 94. Explains practical constraints on design engineers in commercial manufacturing.

Digest>This letter contains supplementary information to the article by Dr. Ulrich Rohde - KA2WEU in QST Jun 94. In that article, Dr. Rohde cited a paper that had been published some years earlier by Mr. Sabin that contained a block diagram of a receiver front end that Sabin had designed.

In this letter, Mr. Sabin describes the situation in which the receiver design was made. It was not a design made from scratch; it was a modification to an existing design which had been in production for some

time. The purpose of the new design was to make the receiver operate to considerably higher performance specifications under a wide range of ambient temperatures. Furthermore, the allowable addition to the selling price was severely limited.

The main point of the letter is to illustrate the practical constraints that design engineers face in commercial production.

Title>TC2:Toroid Coupling Feeds Compact Transmitting Loop
Author>Hirschberg, Ken - K6HPX
Source>QST Mar 95, pp. 72-73
Abstract>An improved method of feeding power to a transmitting loop antenna.

Digest>K6HPX describes a compact transmitting loop antenna that he has built using a unique feed method. Most such loops that have been described recently in ham literature feed the main loop by inductive coupling from a physically smaller loop standing along side it. The author feeds his loop using a 1:1 ferrite transformer.

His main loop is made of 1-inch (25-mm.) diameter copper pipe. Threaded on the pipe is a ferrite core made of two Amidon FT-240-61 toroids side-by-side. The coax feedline from the transmitter is also threaded through the core. The end of the center conductor is soldered to the shield braid some distance back from the end to form a single turn. Finally, a string of 50 ferrite beads, Number FB-73-2401, are strung on the coax ahead of the loop as a current balun.

K6HPX finds that, when he operates his loop on 160-, 80- and 40-meters, he sees an SWR of nearly 1:1 at resonance, without using an antenna tuner.

Title>TC3:PIN Diode Information - Free!
Author>Katz, Steven D. - WB2WIK/6
Source>QST Mar 95, p. 73
Abstract>Describes a free handbook for circuit designers using PIN diodes.

Digest>The Microsemi Corporation, 580 Pleasant Street, Watertown, MA 02172 is offering a free booklet: PIN DIODE DESIGNERS' HANDBOOK, Publication No. PD-600. It is a 40-page booklet including fundamentals of PIN diode design and applications. It will be a valuable aid to any amateur designer using PIN diodes.

Title>TC4:Null Steerer Neatly Nulls Noise
Author>Olberg, Stirling M. - W1SNN
Source>QST Mar 95, p. 73
Abstract>Null steerer is highly successful in suppressing strong radio noise emanating from a nearby high-voltage power line.

Digest>W1SNN lives with 140-kV. power lines running through his property. They produce noise on all HF bands continuously, sometimes reaching as high as 10-dB. over S-9 on his receiver. Since he built a null steerer in accordance with W7XC's article in QST Jul 94, he has been able to phase out the noise to the extent that it is almost gone!

LAB NOTES (LN)

Title>LN1:Mobile Installations and Electromagnetic Compatibility
Author>Hare, Ed - KA1CV
Source>QST Mar 95, pp. 74-75
Abstract>Questions received by the ARRL lab from amateurs installing radios in vehicles, and their answers.

Digest>KA1CV, ARRL Laboratory Supervisor, wrote the article: "Automotive Interference Problems: What the Manufacturers Say" in QST Sep 94. In it he reported the results of his survey, including questionnaires and interviews with automobile and truck manufacturers, to determine their attitudes toward customers' installing radio equipment in their vehicles.

This article is comprised of questions typical of those that Mr. Hare has received since his article was printed, along with his answers. Most of the questions relate to problems that hams have had in getting information from their dealers, and individual troubles they have encountered in trying to install and operate mobile radios.

Some of the common-sense advice the author gives is for the car buyer, before he buys a vehicle, to insist on assurances from the dealer and the manufacturer that what he wants to accomplish can be done and that it will not affect the manufacturer's warranty. As to how the equipment will work once it is installed, his advice is to make a trial installation before buying.

If the vehicle is already owned, be sure to follow the manufacturer's guidelines precisely in making an installation. Finally, be conservative. Especially with late-model vehicles that are loaded with electronics used in their operation, do not try to install a high-power amplifier unless the manufacturer has very specific guidelines concerning how that can be done.

HINTS AND KINKS (HK)
Conductor: David Newkirk - WJ1Z
Sr. Asst. Technical Editor

Title>HK1:A CW Interface for Commodore C64 and VIC-20 Computers
Author>Bartlett, F. A. - W6OWP
Source>QST Mar 95, p. 70
Abstract>Construction details for a CW interface to use Commodore computers to send and receive Morse code.

Digest>The venerable Commodore C64, and its younger cousin, the VIC-20, are still useful in amateur radio applications. W6OWP gives construction information to build a keying interface that will allow one to use the computer and its keyboard to send and receive Morse code.

The interface is very simple; it uses a single IC, two transistors, three diodes, and a half-dozen passive components. It can be conveniently built on a small piece of perf-board.

In operation, tuning a received CW signal is sharp. When it is properly tuned, an LED flashes in step with the code. The author advises that best copy usually occurs at the lowest audio volume setting that is compatible with fading conditions.

Title>HK2:An Audio Limiter for Use With DSP Filters
Author>East, Larry V. - W1HUE
Source>QST Mar 95, p. 71
Abstract>Construction details of an audio limiter to prevent input signal from saturating a digital signal processor.

For effective operation of a digital signal processor, the audio volume must be set so that the received signal strength approaches, but does not reach, the upper limit where saturation occurs. Many digital signal processors (DSP) in use, including the popular W9GR unit, use 8-bit technology and are consequently limited in dynamic range. A common experience in round-table QSOs, in which a number of stations participate, is that signal strengths vary enormously between stations. When the audio gain is adjusted to an optimum for one station, the next station is very apt to be so strong as to saturate the DSP, or so weak that DSP is not effective.

To overcome the need for continuously adjusting the gain, W1HUE built a limiter to be inserted between the audio output of the receiver and the input to the DSP. It is a simple circuit requiring only two diodes and a half-dozen resistors and capacitors.

With the limiter in use, one tunes in a strong signal and turns up the audio volume until the DSP saturates, then adjusts the threshold control on the limiter until the extreme distortion caused by saturation goes away. From then on, it will be possible to adjust the receiver audio gain without worrying about saturation.

Title>HK3:Two Hints for the Kenwood TS-850S Transceiver
Author>Shelhamer, Mark - WA3YNO
Source>QST Mar 95, p. 71
Abstract>How to remove the broadcast band signal attenuator and also how to prevent excessive operation of transmitter-output-filter relays.

Digest>The first of the two hints in WA3YNO's letter has to do with signal attenuators that are automatically switched into use when the radio is receiving on the standard AM broadcast band. Such attenuators are common in modern receivers; their purpose is to avoid

intermodulation distortion caused by very strong local broadcast stations.

The author provides detailed instructions to allow one to remove the attenuator completely. The editor has inserted a note advising readers who follow this suggestion to use a sharply-peaked, tunable preselector to avoid the IMD that may result.

The second suggestion in the letter involves what he considers to be excessive operation of the relays controlling the transmitter-output-filter as he tunes across the radio spectrum during shortwave listening (SWL). He finds the clicking of the relays bothersome. He avoids this by putting the transceiver in split-frequency mode. In that condition, the transmitter band is not switched along with that of the receiver.

FEEDBACK (FB)

Title>"A Function Generator With a Frequency Counter Digital Readout", QST Apr 94
Author>Spencer, Ben - G4YNM
Source>QST Mar 95, p. 73
Abstract>In the article, on page 38, Figure 3, the ECG replacement part number for parts DS1 to DS3 should be ECG3075.

NEW HAM COMPANION (NHC)

Title>NHC1:Listen to Learn
Author>Keith, Larry - KQ4BY
Source>QST Mar 95, pp. 56-57
Abstract>To learn customary practices in amateur radio operating, listen before transmitting.

Digest>Operating practices vary greatly between the different modes of amateur radio, and even on different bands. The best way to learn customary operation is to listen and observe before transmitting.

As an example, when one first operates on VHF/UHF using a repeater, there are a number of questions to which the answers must be found. The author suggests that, before beginning operations, one should make a notebook containing a number of items of information for each repeater. Essential items include: output frequency, frequency offset, location and callsign, whether or not tone access is required, and the tone frequency; autopatch access codes; time-out timer setting; whether it has a courtesy beep; whether it automatically signals time for ID; whether there are periods when the repeater is reserved for special use; and what types of activities are customary during the various times of day.

Operating practices also vary, such as: how stations initiate contacts with each other; how they join a QSO already in progress; how they terminate a contact; and other such customs. Most newcomers want to avoid giving the impression of being neophytes. By listening extensively, one can quickly learn the informal rules of customary procedure that cause one to be recognized as a skilled operator.

Title>NHC2:Otherwise Occupied
Author>Patterson, Dave - WB8ISZ
Source>QST Mar 95, pp. 58, 60
Abstract>Do not let the amateur radio hobby become an obsession.

Digest>Usually, the ham radio hobby is beneficial to the participant. It is pleasurable, relaxing, and gives one a respite from the cares of the working world. But in some cases, it can become an obsession.

WB8ISZ, in this article, cautions everyone to keep a sense of proportion in our lives. We must never lose sight of the fact that other matters, such as family, home, and the various aspects of daily living are more important than a hobby.

Title>NHC3:Getting Your Club Started in Transmitter Hunting
Author>Dunn, Si - K5JRN
Source>QST Mar 95, pp. 59-60
Abstract>Hints for successful operation of club-sponsored transmitter hunts.

Digest>Hidden transmitter hunts, usually referred to as "Fox Hunts", or "Rabbit Hunting", are activities that radio clubs can use for fun and for generating interest in the club among both active and prospective members.

K5JRN reports on the Denton (Texas) County Amateur Radio Association hunt activities, and offers some worthwhile suggestions concerning how such hunts should be conducted.

The amateur who is acting as the "fox" should not make it easy to find them, but also should not make it too hard. The least desirable outcome would be if all participants should become frustrated, unable to find the target.

The prize should not be awarded to the person or group who first finds the "fox". Rather, it should go to the one who runs up the smallest number of miles getting from the starting point to the end of the search. This approach encourages careful deliberation and the most accurate possible direction finding. Most importantly, it does not encourage speeding or careless driving.

The Denton club always starts their hunts from the town's central fire station and requires that the fox be located in a public place where the hunters can drive and enter without paying a fee. Ideally, they like to have the chase end in the parking lot of a restaurant where all

participants can gather for fellowship and for comparing notes after the hunt is over.

Title>NHC4:The Doctor is IN
Author>Various
Source>QST Mar 95, pp. 61-62
Abstract>Questions and answers primarily of interest to newcomers.

Digest>Questions considered in this issue include: computer-generated RFI; r.f. noise from light dimmers; household ground-fault interruptor (GFCI) circuit breakers tripped by nearby radio transmitters; the Farnsworth method of learning Morse code; amateur television (ATV); Universal Time; tapping d.c. power directly from the battery in a mobile installation; and handling CW DX pileups.

Title>NHC5:Put Your Pencil Away..
Author>Lee, Craig - AA3HM
Source>QST Mar 95, pp. 63-65
Abstract>How modern transceivers and computers can automate many parts of amateur operating and logging.

Digest>Most modern full-featured transceivers have computer interfaces available and many, if not most, hams have computers in their shacks. This combination of computers with transceivers makes much of ham radio operating susceptible to automation.

The process of preparing an operating log can be almost completely automated. In the special case of operating digital modes, even entering the call sign of a station contacted can be done automatically. In other modes, the call sign must be entered manually but, from that point on, entering the rest of the information can be automatic.

The date, time, mode, and frequency are automatically abstracted from the computer's internal clock and through the transceiver interface. If the computer is equipped with a CD ROM drive containing a call sign database, it can be used to provide automatically the name, street address, and QTH of the operator of the station contacted. For contest operating, the same logging program can provide duplicate checking, serial number generation, score calculation, and a calculation of the QSO rate.

Station automation is not limited to logging; the computer can control the transceiver. For example, it can act as a memory keyer and automatically send prerecorded messages. In DX operation, it can calculate the beam heading and actually control the rotator to direct it toward the proper heading. It can also track progress toward awards, such as DXCC and WAS.

The article finishes with instructions to build a computer-to-radio interface that is required to convert the output of the computer serial port to the TTL (transistor-transistor logic) level required by the

radio. It is a simple device that can be built inside the shell of a DB-25 serial port connector.

Title>NHC6:HF DXing: A Beginner's Primer
Author>Kamman, Alan - NW1S
Source>QST Mar 95, pp. 66-69
Abstract>Describes basics of DX operating on HF bands.

Digest>NW1S explains the basics of DXing. He describes how the ionosphere makes worldwide DX possible, propagation characteristics of the various HF bands, pileups and working split frequencies, call signs of different countries, the DXCC, and DX contests. He ends by referring readers to more complete information in THE ARRL OPERATING MANUAL, and YOUR DXCC COMPANION, by Jim Kearman, KR1S.

RADIO TIPS (RT)

These are short items, scattered among the articles in the New Ham Companion section, of interest to newcomers.

Title>RT1:The DC-to-Daylight Receiver
Author>Phillips, Curt - KD4YU
Source>QST Mar 95, p. 65
Abstract>Modern receivers that provide extremely wide operating bandwidth.

Digest>The bandwidth of an idealized ultimate radio receiver might be defined as "DC-to-Daylight". Although these limits will never be achieved, there are now available scanners that cover from 100-KHz. to well past 1-GHz. One of the first of these was the AOR AR-1000, which was a tiny package only 6.7- x 2.6- x 1.4-inches (170- x 66- x 35-mm.) in size. Later, ICOM introduced their R-1, which is even smaller. It covers 100-KHz. to 1300-MHz. in steps as small as 500-Hz. Then the Japanese company, Yupiteru (Japanese-English for "Jupiter") introduced their Model MVT-7100, that covers 100-KHz. to 1650-MHz. in steps of 50-Hz! Finally, AOR brought out their Model AR-8000, which covers 100-KHz. to 1.9-GHz. in 50-Hz. steps. It also provides a 4-line alphanumeric display and a computer interface.

Now, in accordance with a law effective in mid-1994, no scanning radio can be manufactured in, or imported into, the USA that covers the cellular phone frequencies between 800- and 900-MHz. A model of the AR-8000 is now available with those frequencies deleted.

Title>RT2:The Automatic Packet Reporting System
Author>Horzepa, Stan - WA1LOU
Source>QST Mar 95, p. 69
Abstract>The APRS allows tracking movements of mobile stations on a map.

Digest>The Automatic Packet Reporting System (APRS) allows packet radio to track real-time events. It was developed by Bob Bruninga - WB4APR. APRS provides a graphic display of the location of stations and their movements on a map.

Any packet station can add their latitude and longitude to their beacon transmissions; any station monitoring them, that is equipped with APRS software, will display the map with the station positions superimposed on it. Any mobile station that is equipped with a GPS receiver can transmit its position continuously as it is moving. This will allow others to track that movement remotely. The APRS is also an excellent tool to display triangulating bearings from several locations to spot a hidden transmitter.

APRS software for IBM PC compatible computers is available from WB4APR, 115 Old Farm Court, Glen Burnie, MD 21060. A MacIntosh version is also available.

GENERAL INTEREST ARTICLES (GI)

Title>GI1:A Journey to the Center of Asia
Author>Langdon, Terry - W6/G3MHV
Source>QST Mar 95, pp. 43-45
Abstract>Story of a ham's visit to the Russian Republic of Tuva in the center of Asia.

Digest>Along the southern border of Russian Siberia, adjoining the north-western border of Mongolia, is the Russian Republic of Tuva, a part of the Russian Federation. The author had occasion to make a business trip through all of Russia, from Moscow to Vladivostok. While on it, he took a detour to visit this land.

It is a large country, by European standards, four times the size of Switzerland, but has a population of only about 300,000 people. It is located at the exact center of the Asian continent. Tuva, with Mongolia, western China and Tibet, comprise CQ DX Zone 23.

When he arrived at Kyzyl, the capital of the republic, he received a friendly and enthusiastic reception from several hams. With their help, he quickly was able to obtain licenses that allowed him to operate R0/KA6ZYF and R0/G33MHV. In addition, his new friends lent him the use of a transmitter and amplifier. With that rig, and a ground-plane antenna, he operated SSB on 20-meters and caused massive pile-ups from Japan to Europe. Propagation conditions at the time made contacts with the USA impossible.

Title>GI2:Gypsy Hams Go North
Author>Stoner, Jeannie - WH6DZ
Source>QST Mar 95, pp. 43-45
Abstract>Travelog of hams through Alaskan and Canadian arctic.

Digest>This is a travelog describing the trip that the author and her husband made through the Canadian and Alaskan arctic in 1993. They drove through British Columbia and picked up the Alcan Highway in Dawson Creek. After traveling that highway, from one end to the other, they reached Tok, Alaska. From there they drove the Top of the World Highway into the Yukon Territory and up the Dempster Highway to Inuvik, Northwest Territory, crossing the Arctic Circle enroute. Inuvik is the northernmost place it is possible to reach on an established road.

Their mobile home is equipped with HF and VHF rigs, a computer, TNC, a mobile antenna, and portable antennas that can be strung in trees. They used ham radio to make friends everywhere along the entire trip.

Title>GI3:The San Bernadino Microwave Society Turns 40
Author>Laag, David E. - WA6OWD
Source>QST Mar 95, pp. 46-50
Abstract>History of the SBMS.

Digest>The San Bernadino Microwave Society (SBMS) was formed by a small group of amateurs in San Bernadino County, California, in March, 1955. The primary founders were "Tommy" Thompson - W6IFE and Bill Baird - W6VIX.

Individual experimenters had been active for ten years, since the end of WW2, and several of the members were active on the 9-cm. band. In 1957, the SBMS published its first Microwave Handbook, and a year later Dale Bredon - W6BGK wrote a QST article providing details of the San Bernadino 9-cm. gear. In the 1960's and '70's, activities grew; in the '80's microwave became accessible to all amateurs.

In 1986, the first ARRL 10-GHz. Cumulative Contest was run and the four highest scores were run up by SBMS members. Now in 1995, the society is more active than ever, and remains committed to "an expanding role in helping guide the amateur microwave community".

428. WIA President speaks on Fee Rise

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-06 00:00:00 UTC
From: dave@eram.esi.com.au
Message-ID: <3m05bn$44g@eram.esi.com.au>
Source record: 249066
Cross-posted to: aus.radio,rec.radio.amateur.misc,rec.radio.info

I found this circulating on the packet network, and thought it deserved better coverage...

On this week's news broadcast by VK6WIA, the Broadcast Officer Tony VK6TS interviewed the WIA President, Neil VK6NE, & below is a transcript of that interview.

73 Phil VK6KS
Assistant VK6 Broadcast Officer

Tony: I have with me the Federal President of the Wireless Institute, Neil Penfold, and Neil has kindly offered to come into the shack and answer a few questions about the current status of what's happening with the regulations and the fees. Neil, what's the Federal Executive doing at present?

Neil: There's a submission being prepared and hopefully this weekend will see it finished and being submitted to the Parliamentary Committee next week. It's another submission that we're making (we have done previously), but we've been given a few more avenues to follow up. So the indications are that we missed out on one or two before, and the authorities concerned said "if you chase these up, perhaps with the submission you're putting in now, it will be better received."

Tony: The debate in Parliament last week was about bills, but the bills didn't actually specify the charges by the SMA. What's the present position there?

Neil: The ways the fees are set seem to me, a little bit clouded. The issues are being talked about, spoken about, and nobody has a real firm grip on the setting of the fees. But what it comes down to in my estimation is that the SMA is the agency that sets the fees, and the Minister approves it, or he can delegate that authority to the Spectrum Manager. That seems to be what happened in the past - the Spectrum Manager came up with a fee structure, to which we objected, and the rest of the story most people would know. We took it off to the politicians, and anybody else who we thought could help us, and then the politicians would come back to the Communications Committee - that's the Minister for Communications, Mr. Lee, and makes noises saying "we don't like them" and then he would indicate to the SMA to have a look at it again. Then come back with the fee that we are familiar with (the $51.00), and we're still not happy with that, so

that's why the action, Tony is still happening. We're still following it all up. There's another submission to go in, and as I said breaking some new ground, hopefully it will be looked at by the Parliamentary Committee, and again the SMA will be told (we hope) to have a look at the fee structure again, lowering it.

Tony: So that means that at this stage, although people are asked to pay the $51.00, and that's still not final, and your idea is that this is still a negotiable action?

Neil: As far as I'm concerned, it's definitely negotiable. Those who have paid that fee from Monday onwards (3rd April), I hope if the fee get's lowered, will have some reimbursement made to them.

Tony: The other thing is Neil, the account received for the ATV repeater (I mentioned this earlier in the broadcast), what are your comments about this $8900 renewal charge?

Neil: Well, I see that as a computer error, or a computer operator error, let's put it down to that. Within about an hour of the licenses being sent out for these ATV operations by the Amateurs, three states had already rung me to say that they had problems and did say the same thing as local man did here (Cliff VK6LZ, VK6 Divisional President), it was $8000 plus. But when you look in the new book that was issued some time ago, that is the "inquiry into the apparatus licensing system - a new outlook", we find that the ATV license does not get mentioned either in the front of the book where it lists the different categories i.e. Unrestricted, Limited, Novice, Intermediate, Novice Limited, Amateur beacon, Amateur repeater. It misses that in the transmitter types, and you come towards the back where there's a table of annual apparatus license fees for non-assigned sub-types - there's the Amateur Intermediate, Amateur Limited, Amateur Novice, Amateur Novice Limited, Amateur Unrestricted, and they miss the beacon, repeater and ATV for obvious reasons as non-assigned sub-types. So it looks as though the ATV groups have missed out being classified in the Amateur area, and I think they've been picked up as a commercial license. Hopefully we'll know something very early on Monday (3rd April), because at this moment, there's faxes in the offices of the SMA in Canberra waiting to be answered.

Tony: What's the status of the submission by the Wireless Institute for a new license type. This was requested by the SMA for a submission by the Institute at the last Liaison meeting.

Neil: That has been done and we have spoken about it as late as last Monday when Ms Goode was over here in Western Australia, and I met her personally, and I did bring that up as a subject. The reaction seems to be that we will fit under Apparatus Licensing. They only want the three classes of license as issued at the moment, but I angled for a sub-group of the apparatus licensing. That would mean that the Amateurs would sit out at arm's length under the apparatus

licensing, and that the licensing could be handled differently to the all the other groups that do exist which are at the moment under one of the other three.

Tony: What's the status of the new regulations, and what is being done as far examinations is concerned?

Neil: The examinations really don't come into it - that's separate altogether to the radio regulations. What I know of that at the moment is that the Autumn sitting of Parliament which is happening now, and they lay on the table in Canberra. If nothing happens that is if they all get picked up and start debating it, when the Parliament finishes, they will become the Radiocommunications Act of 1995, taking over from the 1992 Act.

Tony: Thanks Neil for coming into the shack, and thanks for the information. I'm sure that the members out there will be dwelling on it and they'll get back to you with some further queries!

Neil: Thanks to those people that have rung us up and told us what's happening. It keeps me informed as to what's going on, because we don't get told everything by the SMA, and we do find out, like this fee for the ATV repeater, then we can act immediately on it. The other part of the action is that the technical licensing structures are going through too, something we haven't brought up. All the generic conditions applying to them have been written out, and strangely enough, they've been written into the rules you might say of today, when they're all going through the legal processes in January. We thought that take a lot longer to come through. So I do have a paper at home that shows some of the new conditions under which the Amateurs will operate in the future, and of course one of them is the new Novice Limited license which comes into being.

Good point. Let's not abolish them, just restrict them to a bandwidth of
say 100 Hz and on coordinated frequencies. I'm with Fred.

Actually, it would be more accurate to say it was the work of Hiram Maxim. The League was broke, and down to a handful of members at the end of WWI. Maxim, on his own nickel, went to Washington and lobbied the government. He and Tuska rallied the widows and orphans of former amateurs to put pressure on Congress. And there were other, larger and stronger, radio clubs who also worked to kill the Alexander bill. Not to mention that the fledgling commercial users weren't enamored of being placed permanently under Navy control.

How about space communication retransmissions by WA3NAN?

It is frightening to have a few misguided egomaniacs assume that they are
acting in my best interest as an amateur and send or support such petitions
to the FCC. How can W5YI, who makes a living off of Amateur Radio peddling
code practice tapes, etc, (see back of April CQ), posture this petition as
though he is acting in the best interest of U.S. hams? If his petition
wasn't so dangerous it would be laughable.

If one reads the archives of earlier posts and responses by KO4TA on the
subject of K1MAN, it can be seen that Maia is essentially playing out KO4TA's
end game which is to "..squash K1MAN like a mosquito..". One will also
conclude that it really doesn't matter about the means (ancillary damage)
as long as this end is achieved.

So what should one do now? Flood the FCC and Flimflam, Finagle, and Fleecum's
offices with comments on the NPRM? Maybe that would remind them not to
be so quick to file such frivolous and mean spirited petitions in the future?
Ignore the whole matter and hope that it will go away? Are you haunted by
the vision of impressionable bureacrats reading the sugar coated comments
from proponents of this petition?

SUBJECT:ARLB034 Petition threatens W1AW
Organization: American Radio Relay League

JUST what we need! More government regulation and restrictions!
W5YI must be going crazy!

W1>QST de W1AW
W1>ARRL Bulletin 34 ARLB034
W1>From ARRL Headquarters
W1>Newington CT April 5, 1995
W1>To all radio amateurs

W1>SB QST ARL ARLB034
W1>ARLB034 Petition threatens W1AW

W1>A petition for rule making before the FCC would eliminate all
W1>one-way transmissions such as code practice and information
W1>bulletins on the amateur bands below 30 MHz, including those from
W1>W1AW.

W1>The FCC has assigned file number RM-8626 to the petition, which was
W1>filed by Frederick O. Maia, W5YI, publisher of the commercial
W1>newsletter the W5YI Report. The petition seeks to eliminate the
W1>rules that permit one-way information bulletins and Morse code
W1>practice in the amateur bands below 30 MHz. The effect of the
W1>petition would be to silence W1AW bulletin and code practice
W1>transmissions, among others.

W1>Maia calls the FCC rule that permits certain one-way transmissions
W1>on the amateur bands ''a very permissive category and taken in its
W1>broadest context, permits just about anything to be transmitted that
W1>is even remotely associated with the Amateur Service.''

W1>Maia says that code practice is now available on computer software,
W1>and information bulletins about Amateur Radio can be had on various
W1>computer on-line services.

W1>Comments on the petition may be sent in the form of a letter to the
W1>Secretary, FCC, Washington, DC 20554. The file number, RM-8626,
W1>should be shown prominently at the top. An original and five copies
W1>is preferred, but single copy comments will be accepted.

W1>A copy should also be sent to Mr. Maia's lawyer, Raymond A.
W1>Kowalski, Keller and Heckman, 1001 G Street NW, Washington, DC

W1>20001. The deadline for comments on the petition is May 4, 1995.
W1>NNNN

Let's hope we have plenty of letters to FCC opposing this silly
and un-necessary proposal. All of W5YI's fellow retirees surely
can't agree with him!

DL>Newsgroups: rec.radio.amateur.misc
DL>Organization: NRK Clinic for habitual NetNews Abusers - Beltway Annex

DL>To make 20/30 hz you have several options:

DL> 1) Buy an old telco keysystem power supply at a hamfest.
DL> Many had local ringing output.

DL> 2) Steal the very clever designs of CP Stocker & build a
DL> "Subcycle" magnetic 60-20 hz converter. This may take a
DL> while......

DL> 3) Use a 555 oscillator to drive some decent switching
DL> semiconductors. Extra credit if you can do it with SCR's
DL> in a jones circuit.

DL> 4) Find a magneto in a army field phone -- crank away.

DL> 5) Invent something new......

DL>Of these, #1 is easiest & cheapest, I bet....

These are great general suggestions, but again, they do not really
make it easy to build-up. You are asking me to become a circuit design
engineer which is beyond my training and the time and resources
available. I was hoping for a practical circuit that would let me
not only RING the local phone, but also allow two phones to talk to each
other without any help from Ma Bell.

If I found the box you describe, I wouldn't know how to change it into
what I wanted it to do, and I don't see why it would have ringing
voltage present. Maybe for an internal intercom type operation
on a multiline system?

No Marc, you nailed it. W5YI's insidious and capricious proposal
is the latest attack in a silly vendetta among bored 75m SSB ops
who love to be pugnacious with each other. It just happens that they
have made the rather unfortunate step now of attacking W1AW and the
League in the process.

This only buttresses K1MAN's position. Without doing anything to
defend himself, they have handed him a victory in one step by
filing this petition which I believe is destined to fail.

Well from now on I will monitor 146.52 when possible on the road. Hope others will do so also. As an old CB'er of 20 years ago, I really miss the ability to use the ham band to talk to fellow travelers. Say what you will about CB, it was great to be able to swap road conditions and travel related trivia. When I have made contacts on 146.52 while on the road, its has always been with fixed stations who seem to have no interest in "travel talk". All we have to do is designate a travelers simplex frequency and use it. 146.52 seems like a good choice. It's really a pain to have to use the little green book to look up a local repeater while on the road. Even then, no one seems much interested in conversing with a travler who is looking to ease the bordem of long hours at the wheel.

I propose we designate .52 as the unofficial road frequency and then use it. At any rate, if you seem my Ham tags on the road, please give me a call. If I don't answer maybe someone else will.

From: nacec@millcomm.com
Message-ID: <3m0v24$l7l@news.millcomm.com>
Source record: 249081

We have just put information on this project, which includes images, graphics and text, onto our own Homepage area.

Part of this homepage area is seeking information on ARES & RACES groups for our emergency information data base. This information will help outside relief organizations, coming into your area after a large disaster has occured, get in contact with your group quickly.

Also, this organization plans to include the support of local ARES & RACES groups in its field ops plan, so it would not heart for you to know about us, who know, you may even want to volunteer to help build this organization.

We are currently getting about 3000-4500 hits a day into the homepage area. We are also now starting to get new volunteers DAILY that are willing to help with the building and operation of this project.

I have been told for years that the Amateur Radio community is very local community oriented and is very active in volunteering to help. Right now we are running only about 50% hams, why is this number not higher?????

I would like to see more folks from the Amateur radio community get involved and help,

I'm sure that what I have been hearing for the past 20 years about Amateur Radio Operators willing to help was not just talk, lets see some action!!!

If you are serious about helping your community then you should think seriously about taking an active part in this emergency communications organization.

The new WWW Homepage can be found at:

http://www.winternet.com/~nacec/index.html

Hope you find the information helpfull and of interest.

All the best to you and yours!!!!

Gary Coffman (gary@ke4zv.atl.ga.us) wrote:

: Most serious 10 GHz work today is done with crystal referenced narrow
: band equipment. However, a good way to get started is with a pair of
: gunnplexers. Activity is low enough that you need *two* stations to
: start out. Otherwise you may find no contacts. Since power is almost
: always low on 10 GHz, directional antennas are essential. Dishes are
: almost universally the way to go. A 2 foot dish is a good place to
: start. Bigger dishes can be used as you gain experience.

My experience in New England is quite different. During the 10 GHz contest there is quite a bit of activity, with a nearly 50/50 split on narrowband (SSB/CW) and WBFM. The WBFM activity does tend to be concentrated in the Northern half of the area. Last year, a month after the contest, the SSB/CW operators arranged our own activity session--a dozen stations showed up. The balance, which has held for perhaps 4 years, may be changing as I've heard that a few dozen amateurs just outside New England (NYC/LI) are busy working on building their own SSB/CW gear. Unfortunately, a lot of these guys are worried about whether their transmitter puts out a full watt, as opposed to a fraction, so they are spending a lot more time tweaking things up than I think they should.... Many of them are converting surplus Ku band hardware obtained via Chuck, WB6IGP.

Dishes are not the way to go for beginners. I recommend 17 to 20 dBi horn antennas. A 2 ft dish is just too difficult to point unless you know how to accurately find true North and determine headings to distant points. You want to learn how your gear operates first, and then learn how to point really sharp antennas (3 dB or narrower beamwidth). For instance, you tune WBFM by tuning for best signal to noise, not maximum audio output.

I for one do not support this petition. It will effectively kill W1AW code practice and bulletins. Mr, Maia stands to gain financially from this with increased sales of his code practice tapes and computer programs.

Rules are already on the books to deal with K1MAN and his ilk if they were only enforced. This is just another example of when the rules (or laws) are not followed we don't increase enforcement we just pass another rule. Think before you support this petition there may be more to lose than to gain.

>engineer which is beyond my training and the time and resources
>available. I was hoping for a practical circuit that would let me
>not only RING the local phone, but also allow two phones to talk to each
>other without any help from Ma Bell.

You asked how to ring a phone.
The hard part is getting 20/30 hz.

Here's an easy way to make an automatic ringdown. It's not
optimum, but works....

```
tip side
----------------------------------------
P | P
| R |
| DC |
HS | HS
----------------------------------------
ring side

--------------------|-------------------
NG RC NG
HS 20hz HS
----------------------------------------
```

Each P_hone is connected across the tip & ring, with a H_ook S_witch
contact in series. When both are hung up, the _DC_ supply has no path
and the _R_elay coil is not energized. Pick up either, it is. Pick up
both & the DC is talk-battery to converse with.

On the second pair, each phone has its ri_NG_er in series with the back
contact on the H_ook_S_witch. The _20hz_ ringer supply is controlled by
the _R_elay _C_ontact.

When either phone is off-hook, the Relay closes, and you get ringing
current to both. BUT the off-hook phone does not ring since its
hookswich contact disconnected its ringer.

The other party answers & it too stops ringing.

Disadvantages:
needs 2 pair, not one
if you both don't hang up at the same time......

451. Ham bands in U.K.?

Hello all,

I'm travelling to the UK this month and want to bring a HT with me. Mostly I'll have it because I want to use it when I return to the US, and can talk to the friend that is picking me up at the airport.

My question: Are there customs problems in bringing a 2m or 70cm HT into Britain? If I am going to have trouble with a HT, even if I don't intend to use it while there, I will leave it at home.

I know I can look this up, but since I'm on the subject, is there a problem with using a 2m or 70cm ht there, or are the bands allocated differently enough so my HT would be out of the ham areas?

Please email me, I don't get to this group that often.

Thanks in advance!

Is there one? Just curious

454. GB2RS News 9th April 1995

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-06 00:00:00 UTC
From: dave@llondel.demon.co.uk
Message-ID: <797215749snx@llondel.demon.co.uk>
Source record: 249092
Cross-posted to: uk.radio.amateur,rec.radio.amateur.misc,rec.radio.info

Good morning. It's Sunday the 9th of April and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

And we start this week with the sad news that RSGB Council Member Frank Hall, GM8BZX, passed away last weekend. Frank was a Council Member for several years, culminating in his becoming President in 1990. He was re-elected to the Council last year to represent Scottish members. Frank's work for the Society and for amateur radio will be sadly missed.

Now a request from the RSGB Chief Morse Examiner, Roy Clayton, G4SSH. Club secretaries and organisers of rallies who require the RSGB to run Morse tests on demand at their events, are advised to book through the Senior County Examiner or Chief Morse Examiner well in advance, to ensure that a team of examiners is available. There have already been instances of Morse tests on demand being advertised in the amateur radio press without the knowledge of the Society, which can lead to an embarrassing situation for the organisers and disappointment for the candidates.

The 2 metre repeater in Jersey, GB3GJ, which operated on channel R2, was scheduled to be taken off the air at 9.00 am today. It will remain quiet until the notice of variation allowing a change of site is issued.

The Central Lancs Amateur Radio Club, in conjunction with the Cave Rescue Organisation and the Cave Radio Electronics Group will be operating special event station GB4CRO from White Scar cave during Easter weekend. The station plans to start operation on Thursday evening, the 13th of April, and thereafter should be on the air from approximately 0600 to 2400 from Good Friday until Easter Bank Holiday Monday. Check around these frequencies: 3.720, 3.775, 7.075, 14.220 or 21.250 MHz.

A second station, GB2CRO, run by the Mid-Glamorgan Amateur Radio Group and the Cave Radio Electronics Group (Wales), will operate from the Dan Yr Ogof {pronounced Dan-ear-ogov} cave complex.

And next weekend, the Royal Naval Amateur Radio Society HMS Belfast London Group starts activity as GB2RN on Saturday the 15th of April. They will be active until Sunday the 23rd of April on HF, VHF and UHF using CW, phone and digital modes. A colour QSL of HMS Belfast will be available. Further details may be obtained from Bob Wilson, G0FEK, whose address is correct in the latest RSGB Call Book, or by phone on 0181 220 0388.

The RSGB Liaison Officer for Gwent, Peter Dombrowski {pronounced Dom-brov-skee}, GW1NYO, now has a new telephone number. It is 01495 248847, that's 01495 248847 - the new telephone number for the RLO for Gwent.

Don't forget the RSGB Headquarters annual Open Day on Saturday the 22nd of April. This year HQ will be celebrating 100 years of radio with a Marconi exhibition and a special event station, GB100IMD. In addition, there will be guided tours of headquarters, including the museum, library, shack and QSL bureau. The RSGB HF Awards Manager will be in attendance to check QSL cards and issue awards. The RA, SSL and traders will also be there.

Now some items of HF DX news from the weekly RSGB DX News Sheet which is edited by Brendan McCartney, G4DYO.

From Belize, ZF2VW will sign V31VW from tomorrow until Monday the 24th of April. Activity will be on 10 to 20 metres, with emphasis on 12 and 17 metres CW and SSB.

From Grenada {pronounced Gren-ayda}, G4RVH and G3NBB will sign J37P and J37Q respectively as from Wednesday the 12th until Friday the 21st of April. Check 14.120 to 14.137 MHz around 2300 UTC.

And from Sri Lanka, HB9BRM is signing 4S7/HB9BRM from now until Thursday the 27th of April. Check 14.222 or 21.222 MHz around 1700 UTC and 3.780 or 7.050 MHz from 1900 to 2100 UTC.

Next the Rally News, and we know of two rallies today, Sunday the 9th:

The Launceston Amateur Radio Rally takes place today at Launceston College, starting at 10.30 am. The event features trade stands, a bring and buy stand, an RSGB bookstall, and Morse tests on demand. Take two passport-size photographs and identification if you wish to take your Morse test at the rally. Talk-in is on 2 metres, channel S22.

Also today, the White Rose Rally takes place at its new venue - Leeds University. Doors open at 11 am, and the event includes a bring and buy sale. Morse tests will be available on demand: don't forget the two passport-size photographs and identification.

The Amateur Radio Caravan and Camping Club rally at Amerton near Stafford, will take place from Good Friday to Bank Holiday Monday. Details may be obtained from Alan Gard, G4LWA, on 01494 531755.

And on Saturday the 15th of April, the All Micro Show Radio Rally and Electronics Fair will take place at Bingly Hall, Staffordshire County Showground, Weston Road, Stafford. Doors open at 10.00 am and further details may be obtained by phoning 01473 272002.

Next Sunday, the 16th of April, the Cambridgeshire Repeater Group amateur radio rally will take place at Philips Telecom catering centre, St Andrew's Road, Chesterton, Cambridge. The event will feature trade stalls and a bring and buy stand, and the doors open at 10.30 am. For further details please call Darren, G1ERM on 01223 60601 during the

evening.

Now for the HF contest news:

On Wednesday the 12th of April, the second event of the RSGB Slow CW Cumulative contest will take place. The rules are in February's RadCom.

Next weekend, on 15th and 16th of April, the Holyland Contest will take place. Brief rules are on page 22 of the March RadCom.

Next some VHF contest news:

The first 23 cm and 13 cm fixed contest and SWL contest takes place this evening between 1700 and 2100 UTC. The rules were published in the February Radio Communication.

And on Wednesday the 12th of April, the second event of the 144 MHz SSB cumulative contest will take place between 2000 and 2200 local time. The rules are in February's RadCom.

And now the solar factual data:

The period from the 27th of March to the 2nd of April saw solar activity at low levels but with a decline in solar flux levels. Geomagnetic activity was mostly unsettled. Sunspot numbers increased slightly from 28 at the start of the period to 52 on the 29th, but then declined to 29 by the 2nd. The mean for the period was 40. Solar flux levels declined every day from 89 units on the 27th to 76 units by the 2nd. The average for the period was 80 units. Numerous small sub-flares took place in the first half of the period, the largest being a C2.2/SF on the 28th. On the 29th a C1.6/SF was accompanied with a type II sweep. The electron fluence remained at a high level till the 2nd but then declined to a moderate level. The background X-Ray flux levels declined every day and ended the period at A1.5 units. The average for the period was A4.8 units. The 90-day solar flux average on the 2nd was 84 units.

Geomagnetic activity was mostly unsettled throughout the period but on the 1st at 17.20 a sudden impulse increased activity, and this lasted till the following morning. The most probable cause for this was the type II radio sweep on the 29th. The only quiet day was the 31st, with an Ap index of 7 units. The average for the period was Ap 14 units. The aa indices, as supplied by the British Geological Survey for the period from the 21st to the 27th of March, remained at very quiet levels till the 25th, only 4.1 nanoTeslas being recorded on the 21st. Activity increased to sub-storm levels on the 26th and the 27th with 48.7 and 39.6 nanoTeslas being recorded respectively. During the afternoon aurora on the 26th 81 nanoTeslas was recorded at Hartland. The average for the period was 19.0 nanoTeslas, about K2.

I'll repeat the figures: spots-40, flux-80, Ap index-14, X-Ray flux A4.8.

Now the ionospheric data for Central France.

The F2 daytime critical frequencies at Poitiers, as reported by Meudon for the period from the 24th to the 30th of March, averaged 7.1MHz. Levels were up to 8.4MHz on the 26th, but were as low as 6.5MHz on the 24th, 29th and the 30th. The darkness hour lows declined from 3.4MHz on the 25th to 2.1MHz by the 27th, the average for the period being 2.7MHz. The daytime highs took place as early as 12.00 hours on the 28th, but the high was between 15.00 and 19.00 hours for the rest of the period. The darkness hours lows took place at 05.00 hours everyday, except for the 26th when the low occurred at midnight.

I'll repeat the figures: Highs - 7.1MHz, lows - 2.7MHz.

And lastly the solar forecast.

This week the quieter side of the sun will be rotating away, and solar activity is expected to be very low. Solar flux levels are expected to increase all week and end the period in the mid to high 80s. Geomagnetic activity may be at sub-storm levels today and for the next couple of days but then decline to quiet levels after midweek. Ionospheric MUFs for the south are expected to improve as the week goes by and be up to about 21MHz in the south and 18MHz in the north. The darkness hour lows are expected to be at about 11MHz, particularly after midweek.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Victor X-Ray and G7 Uniform Quebec series, and Novice calls in the 2 0 Alpha Kilo and 2 1 Delta Victor series.

--

GB2RS is prepared by the Radio Society of Great Britain
and is broadcast in the 80m, 40m, 6m and 2m bands.

IK>CC>Has anyone ever considered a mobile beacon to raise some activity on
IK>CC>VHF/UHF simplex frequencies when traveling? I usually have the
IK>CC>radio on but grow tired of calling to see if anyone is out there.
IK>CC>If there were a way to automatically check for activity and alert us
IK>CC>when someone else is in range, there may be more activity on 146.52.
IK>CC>The beacon could be as simple as a fast cw id at random intervals.
IK>CC>The id would only get transmitted if nothing breaks the squelch for
IK>CC>a programmable time. The delay would be to listen for ongoing QSO's
IK>CC>and other beacons. The beacon could also copy the cw id and provide
IK>CC>a display so the operator knows who is on the frequency.
IK>CC>
IK>
IK>My first reaction is "Wow", what a simple but great idea. Even
IK>without the ID display, just the CW breaking your squelch would
IK>be a start. A simple "QRZ?" would suffice if you missed the CW
IK>callsign.
IK>
IK>73, de Hans, K0HB

I think that's a good itde, and as a matter of fact, that type of
Ider is availible for about 20 bucks. It's small enough to fit in most
mobile rigs (it's very small) and would be very nice on calling
frequencies. Problem is that you should be able to turn it off for
repeater work.

IW> Francis ⊗/ Francis@UKPR.UKY.EDU Francis@MIK.UKY.EDU KE4UWN

You speak of "long waits" of 35 minutes. Gee, I waited THREE MONTHS to
get my first ticket (this was only 3 years ago) and you had to have
paper in hand before you could operate!
Now that's a long wait....

IJ>jcw@kd4dts.radio.org (John C. Wren) writes:

IJ>>the majority of them are the "Trucks, Trailers and Medicaid" type. In my
IJ>book,
IJ>>except for one possible repeater, 2m is a write-off, and only used for remo
IJ>>basing.
IJ>(in regard to a new 440 machine:)
IJ>>This repeater was started because many of the users used to hang out on a
IJ>>local 2 meter machine. They got upset when the talk was always techical.

IJ>Hi John: There seems to be a contradiction between these two paragraphs.
IJ>How can the majority be ``trucks, trailers and medicaid'' types, but
IJ>at the same time ``the talk was always technical''?

IJ>One would think that a repeater in which the talk was always technical
IJ>would be a sought-after machine. I guess some in this new generation of
IJ>hams aren't interested in the technical side of the hobby. How sad.

IJ>Jeff NH6IL

This has gone on too long for it's own good.
John, if you think they are boring the solution is simple, DON'T TALK TO
THEM, No one is forcing you to join in. If you don't like the
conversation, that's just fine. I, myslef happen to enjoy technical
discussion on a repeater as I may learn something from it. Maybe you
made a bad hobby choice....

459. Re: EME help?

>I'd like to start building a 2m EME station and would like to enlist the
>help of fellow netters...can anyone help me?
>
> I have questions that other EME dudes could probably answer, like
>what is the favorite TX/RX? Favorite antennas? Favorite nets on HF to
>coordinate? Favorite magazines/newsletters? etc...
>
> Any help is appreciated...
>

A listserver for EME people has just been started thanks to
Mike Owen W9IP. To subscribe (I sure hope I've got this right) send
e-mail to

LISTSERV@vm.stlawu.edu

in the first line put

SUBSCRIBE Moon-Net Your Name

You will get a reply acknowleging your subscription, and
instructions. The group is only a week old, there is no FAQ yet,
presumably someone will do one, and while there aren't any of
the answers you want there yet, someday maybe there will be.

The short answer to your question is that you need 150-300W,
two 15 element steerable yagis and a low noise pre-amp at the masthead.
You'll be able to work W5UN, K5GW and VE3ONT. That will get you
started.

HAMFEST/COMPUTERFEST CALENDAR 1995 - NORTHERN ILLINOIS
last updated April 6, 1995 |

o Please report additions or changes to Bob Parnass,
AJ9S, office phone: (708)979-5414, electronic
mail: parnass@ihlpf.att.com. Thanks to Dennis
Dale and ARRL for providing information.

APRIL

April 9, Sunday: Rockford, IL - Electronics Expo & Ham-
fest. Rockford Metro Center. 300 Elm Street. All
indoors. 8 AM - 1:30 PM. Talk-in on 146.61, 223.88.
Admission $5.00. Info, Wayne or Fay (815)397-6027.

April 23, Sunday: Arthur, IL - Moultrie ARK info: Ralph
Zancha, WC9V, PO Box 55, Lovington, IL 61937, 217-873-
5287.

April 28, 29, 30: Dayton, OH - Dayton HamVention. Hara
Arena, Information, General: (513) 276-6930, Write:
Hamvention, Box 964, Dayton, OH 45401-0964.

MAY

May 7, Sunday: Sandwich, IL - DeKalb Hamfest, |
Kishwaukee ARC. Sandwich Fairgrounds, Suydam and Getty |
Roads, Sandwich, IL. For info, contact KARC, PO Box |
264, Sycamore, IL 60178.

May 21, Sunday: Wabash, IN - Wabash County ARC, info:
Larry Manning, N9AFI, 5199 E. State Rd. #218, LaFon-
taine, IN 46940, 317-981-4735.

May 21, Sunday: Peotone, IL - Kankakee Area Radio
Society, Will County Fairgrounds. info: Willis Bowser,
K9IFO, 1210 N. Riverside Dr., Momence, IL 60954-3452,
815-472-2079

May 28, Sunday: Chicago - Chicago ARC. DeVry Insti-
tute, 3300 N. Campbell. Starts 8 AM. Setup 6 AM.
Admission $5. Kids under 12 free. Talk-in 147.255,

444.825. Info, (312)666-1606 or (312)545-3622.

JUNE

June 4, Sunday: Princeton, IL - Starved Rock Radio Club. Bureau County Fairgrounds. Admission $5. Talk-in 146.355/955. Info, Bruce or Debbie Burton, KU9A (815)795-2201.

June 11, Sunday: Willow Springs, IL 6 Meter Club Hamfest, Six Meter Club of Chicago. Santa Fe Speedway, 91st Street and Wolf Road. Admission $5. Gates open 6AM. Talk-in on 146.52 simplex or 146.97 repeater. Info, call Joe Gutwein, WA9RIJ, at (708)963-4922.

JULY

July 23, Sunday: Sugar Grove, IL - Fox River Radio League (FRRL) Hamfest, Waubonsee Community College, Route 47 at Harter Road, 5 miles NW of Aurora, IL. Set up Sat 7 PM, Sun 6-8 AM, open to public 8 AM. Commercial dealers, flea market, computer vendors, refreshments. VE session: 10 AM (bring original license, a copy of license & photo ID). Free parking, camping nearby. Talk In on: 146.58/147.66. Adm: adv $4, door $5. Table: 8 ft $10. For advance tickets and information contact: Fox River Radio League, Box 673, Batavia, IL 60510-673 or call

July 30, Sunday: Stickney, IL - DuPage ARC hamfest, Hawthorne Race Course, 3500 South Cicero Ave. Handicap accessible. info: Edwin Weinstein, WD9AYR, 7511 Walnut Ave., Woodridge, IL 60517. 708-985-0527. Talk in on 145.25 MHz with 107.2 PL. (-600). This hamfest used to be held at the American Legion in Downers Grove and was a good small to medium-sized hamfest.

AUGUST

August 6, Sunday: Peotone, Il - Hamfesters Hamfest Will County Fairgrounds, Peotone, Il. Take I-57 South to Peotone Exit 327 (East). Flea market open 6:00am - 3:00pm. No additional charge for flea market space. For advance tickets and information contact: Hamfesters Radio Club, Box 42792, Chicago, Il. 60642 or call Amateur Radio Info-Line: 1-708-535-AHAM more info: Robert Truhlar, W9LNQ, 1701 W. 101st St., Chicago, IL 60643. 312-238-0544

August 27, Sunday: Woodstock, IL - Tri-County Hamfest, Sponsor: Tri-County Radio Group, Inc. McHenry County Fairgrounds, Rte. 47 Junst North of Rte. 14. (Only 14 miles North of I90 on Rte. 47.) 6 AM - 3 PM.

Advanced Tickets: $4.00, At The Door: $5.00 For advance tickets send check to: T.C.R.G., P.O. Box 3107, Skokie, IL 60076-6107 Information: 708-658-1678 Talk in on: 146.52

August 27, Sunday: Danville,IL - Vermilion County ARA. info: Gary Denison, KA9SKS, 14704 E. 2750 N. Rd., Danville, IL, 217-759-7389

SEPTEMBER

September 10, Sunday: Joliet, IL - Bolingbrook ARS Ham/Computerfest, Inwood Recreation Center, 3000 W. Jefferson. This is a medium size hamfest with indoor/outdoor flea market. Gates open 8 AM for general public. Outdoor flea market on paved lot -- setup at 6 AM. Use Exit 253 from I55, or Exits 126/130 from I80. Admission $5. VE testing 9 AM - 12 noon. Bring original license and photocopy, ID and photo ID, plus $5.95 test fee. Novice-only tests are free. Talk-in 147.33, 224.54, and 443.525 MHz repeaters. Indoor table reservation, call Ed Weinstein at 708-085-0527. Info, BARS Hotline (708)759-7005 between 6 AM and 9 PM.

COMPUTERFEST SCHEDULE

Feb 12, Sunday: Dolton, IL - Computer Show Dolton Expo Center, 14200 Chicago Rd. 9:30 AM - 3:30 PM. Adults $6, Kids $2. Call (708)974-3123 for info.

March 5, Sunday: Dolton, IL - Computer Show Dolton Expo Center, 14200 Chicago Rd. 9:30 AM - 3:30 PM. Adults $6, Kids $2. Call (708)974-3123 for info.

Computer Central, College of DuPAGE, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 708-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm.

Source record: 249100

etuggle@dora.auc.trw.com (Eddie D. Tuggle) writes:

>Could someone tell me what incentive licensing is/was?

I'll try: Back before the early '50s, one could get a General
Class license and operate only CW on HF, or get an Advanced and operate
CW and 'phone (this is an oversimplification, but you get the idea).
There was no "entry-level" license (like a Novice). I don't recall
if the Extra existed then, or if it offered any special privileges.

In the early '50s, the FCC set up a licensing structure with
Novice for entry level, General for full privileges, Technician for
people interested only in VHF or radio control (Techs could operate
then in the old 27 MHz radio control band), and Extra for no additional
privileges (sort of a "top of the heap" license for over-achievers
<grin>). Former Advanced holders could continue to renew as Advanced,
but no new Advanced licenses were issued and there were no "extra"
privileges for having one; Generals had every privilege possible on
every band.

In the '60s, ARRL decided that amateur radio was "stagnating,"
so they proposed to FCC that the license structure be "graduated"
and offer privileges to match. The idea was that this would provide
an "incentive" for Generals to upgrade to Extra. Thus was born the
system as it is today (with the exception of the "no-code" Technician,
a recent innovation). The graduated privilege structure of Incentive
Licensing (as it came to be known) kept Novices pretty much where they
were (except the license ultimately became renewable; in the '50s and
early '60s it was one year, non-renewable); ultimately gave Techs the
Novice HF CW privileges; gave Generals limited HF 'phone band access
but all CW access except the 25 kHz Extra segments at the bottom of the
HF bands; re-instituted the Advanced and gave fairly extensive additional
'phone band access to that class (except for 'phone segments reserved
for Extra); and gave Extra Class every privilege on every band.

The new structure was not, in many instances, well-received by the
amateur community at large; after all, Generals went from having everything
to being kicked down to the 3rd rung on the privilege ladder. The
controversy over this innovation (if you choose to call it that) has
raged ever since, and in its heyday was probably *much* worse than the
battles that have raged over the no-code Tech license.

It is interesting that, with the exception of the old radio control
segment at 11 meters (which went away a *long* time ago), the Technician
of the '50s had the same privileges as the no-code Tech does today,
except for the segmnent from 144-145 MHz which used to be reserved for

General and above. In other words, Techs back then had no HF privileges. Today's "Tech Plus" with some limited HF privileges is pretty much what came into being under Incentive Licensing, with some additions & changes in the years since.

I will leave it to you to decide if "Incentive" structures are good or bad; everyone has their own opinion. There are, of course, similar arrangements in some other countries, although we have more different classes of license in the U.S. amateur service (six, count 'em, six different classes!!!) than any other country I'm aware of (but then, I could be completely wrong on that).

Hope this helps; I apologize for any over-simplifications or inaccuracies (I'm doing this off the top of my head).

(Oops ... sorry about the bandwidth on that other reply, folks ... hit the wrong button).

A point on which I could not agree more ... I hope Mr. Maia's proposal dies a quick death with a firm statement from the FCC regarding the matter.

I imagine it sounds more like "dah-di-dah" as in K !
For some reason I'm always accidently turning this feature on with my 741, but my 742 (which I use less) I've never accidently done this... go figure.

The key sequence than enables and in turn disables this is the function key "F" and the PTT key pressed simultaneously. This is hardly as easy as it sounds, for some reason. May I sugges you find a nice quiet simplex freq, or put your tx into a dummy, because it make take 3-4 tries before the #$*^% thing finally works.

Good Luck, es 73

467. OMNI article on ham radio

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-06 00:00:00 UTC
From: mraz@maverick.aud.alcatel.com
Message-ID: <9504062013.AA23629@maverick.aud.alcatel.com>
Source record: 249105

Readers of OMNI magazine will have noticed a nice article on ham radio in the April 1995 issue. The title is "Need a Helping Ham"? by Ed Juge. (Not sure, but this might be W5TOO). It starts off with a brief description of how hams helped out in Bosnia-Herzegovonia and in FL after hurricane Andrew when cellular phone sites were wiped out. The remainder of the article brings the reader up to date on the modern technologies being used/developed by hams. I believe the intent of the article is to dispel the public misconception of ham radio. Well done, Ed.

Dan, I have used a Paragon and a Titan amp for several years. I am not an engineer so my comments may not be authoritative but I have enjoyed using the rig. The gear is not produced in as large a volume as the well known Japanese gear so the boards are not produced with automation; there may be a few more QC problems. My radio has been back to the factory a couple of times and I have had boards replaced on both pieces. So why am I enthusiastic about the line? For two reasons: 1) Because of the people in the service department. When you call you talk to a helpful fellow who knows the gear well. Usually he can diagnose the probable board and have it in the mail. When you get it you drop it in and mail back the old board with a modest fee. 2) The gear is fun to use and it is robust. It doesn't fold up when the SWR is a little high and the filters are a joy to use. So is it worth the money? I don't know but I am satisfied after several years.

469. Response to Incentive Licensing query

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-06 00:00:00 UTC
From: phb@syseng1.melpar.esys.com
Message-ID: <phb.797200138@melpar>
Source record: 249107

etuggle@dora.auc.trw.com (Eddie D. Tuggle) writes:

>Could someone tell me what incentive licensing is/was?

I'll try: Back before the early '50s, one could get a General
Class license and operate only CW on HF, or get an Advanced and operate
CW and 'phone (this is an oversimplification, but you get the idea).
There was no "entry-level" license (like a Novice). I don't recall
if the Extra existed then, or if it offered any special privileges.

In the early '50s, the FCC set up a licensing structure with
Novice for entry level, General for full privileges, Technician for
people interested only in VHF or radio control (Techs could operate
then in the old 27 MHz radio control band), and Extra for no additional
privileges (sort of a "top of the heap" license for over-achievers
<grin>). Former Advanced holders could continue to renew as Advanced,
but no new Advanced licenses were issued and there were no "extra"
privileges for having one; Generals had every privilege possible on
every band.

In the '60s, ARRL decided that amateur radio was "stagnating,"
so they proposed to FCC that the license structure be "graduated"
and offer privileges to match. The idea was that this would provide
an "incentive" for Generals to upgrade to Extra. Thus was born the
system as it is today (with the exception of the "no-code" Technician,
a recent innovation). The graduated privilege structure of Incentive
Licensing (as it came to be known) kept Novices pretty much where they
were (except the license ultimately became renewable; in the '50s and
early '60s it was one year, non-renewable); ultimately gave Techs the
Novice HF CW privileges; gave Generals limited HF 'phone band access
but all CW access except the 25 kHz Extra segments at the bottom of the
HF bands; re-instituted the Advanced and gave fairly extensive additional
'phone band access to that class (except for 'phone segments reserved
for Extra); and gave Extra Class every privilege on every band.

The new structure was not, in many instances, well-received by the
amateur community at large; after all, Generals went from having everything
to being kicked down to the 3rd rung on the privilege ladder. The
controversy over this innovation (if you choose to call it that) has
raged ever since, and in its heyday was probably *much* worse than the
battles that have raged over the no-code Tech license.

It is interesting that, with the exception of the old radio control
segment at 11 meters (which went away a *long* time ago), the Technician
of the '50s had the same privileges as the no-code Tech does today,
except for the segmnent from 144-145 MHz which used to be reserved for

General and above. In other words, Techs back then had no HF privileges. Today's "Tech Plus" with some limited HF privileges is pretty much what came into being under Incentive Licensing, with some additions & changes in the years since.

: change it.

Put down your writing instrument and try to copy it in your head. This little exercise frees up bandwidth for higher CW speed. Then, when you can copy 30 in your head, 20 with writing seems slooooow.

Seriously, I jumped from 18WPM when writing, to tracking along just fine at 35wpm on the W1AW practice sessions within 1 week. And instead of following the speed changes UP, I deliberately started working from faster (with errors) to slower.

I guess I was personally I/O bound :-)

ARLD016 DX news

ZCZC AE91
QST de W1AW
DX Bulletin 16 ARLD016
From ARRL Headquarters
Newington CT April 6, 1995
To all radio amateurs

SB DX ARL ARLD016
ARLD016 DX news

This week's bulletin was made possible with information provided by Steve, W9NUF, the Northern Illinois DX Association, Ken, V73C, Ralph, K1RH, Joe, NJ1Q, Tedd, KB8NW, the OPDX Bulletin, the Yankee Clipper Contest Club PacketCluster network and the Contest Corral column from the pages of QST magazine. Thanks to all.

MARIANA ISLANDS. A group of Japanese ops will sign AH0Q on 40 through 10 meters April 7 to 11.

CAMEROON. Jim, TJ1JB, aka 5X1B, has been operating CW around 14027 kHz between 1930 and 2330z. He is working for the American embassy in Cameroon. QSL via KE9A.

UGANDA. Frank, 5X4D, is on the air almost daily starting at 1800z on 21295 kHz and then on 14245 kHz at 1900z. He may be leaving sometime early this month. QSL via IN3DYG. 5X4B has been operating PacTOR on 14073 kHz at around 2040z.

SPRATLY. The Japanese and Malaysian group has gone QRT. If you missed them you will have another chance, as a group of Philippine amateurs will activate DU0K April 10 to 16.

SVALBARD. Three YL operators will activate Spitsbergen Island, IOTA EU-26, in the Svalbard Archipelago April 8 to 12. Their radio equipment will be a battery powered, synthesized portable radio with 25 watts of output power to a dipole antenna. Try 14247 and 21247 kHz SSB. Some CW operating is planned. Please note that their radio has no provision for split frequency operation. Also consider their limited battery power and make QSOs short by exchanging only signal reports unless otherwise requested. QSL Unni, JW6RHA, via LA6RHA. QSL Turid, JW9THA, via LA9THA. QSL Inger, JW8KT, via LA8KT.

ETHIOPIA. ET3KV was heard on 18117 kHz around 1930z, ET3BT was heard working free style on 14226 kHz around 1915z, and ET2AA was heard on 21240 kHz around 1345z.

DJIBOUTI. J28FD, J28GR and J28BQ will be on the air as J20SF April 14 to 20. Their location will be Seven Brothers Islands group, IOTA AF-059, located in the Gulf of Aden. Plans are for CW and SSB activity on the IOTA frequencies. QSL via F5LBM.

VIETNAM. XV7SW reports a break in his normally busy work schedule and expects to be able to spend more time on the air. He is only authorized to operate on certain frequencies, and has applied for permission to operate on 1827 and 7012 kHz. Listen for him on 3505 kHz.

MALDIVES. DL1IAI will be QRV as 8Q7AI April 12 to 27. He will operate 80 through 10 meters and attempt some work on 160 meters. QSL via his home call.

NEPAL. An all band, CW and SSB operation by JA8MWU will begin about April 26 for approximately 10 days. QSL via his home call.

MAURITANIA. A multi-op group from Italy will be signing 5T0AS through April 20 from Tidra Island, IOTA AF-50. QSL via IT9AZS.

MARSHALL ISLANDS. Ken, V73C, reports that his new QSL manager is Bruce Smith, N4GAK.

QSL NOTES. Ralph, K1RH, wants it known that he is not, and never has been QSL manager for FP5DX. However, K1RH is manager for FP5EK. Ralph has not been manager for TF3CW for many years. Cards for him should go via the TF bureau. And K1RH was QSL manager for 8R1K through 1982. Since that time the 8R1K call has been re-assigned several times, in 1991 to OH2BH, and 1992 and 1993 to OH0XX.

IOTA SHORTS. VK6ML will operate from a small off-shore island or shoal from May 12 to 16. He will sign VK6ISL. Listen for a three day operation from a small southern Japanese island by JA3IG/6 starting April 23. Both operations will be new ones for the IOTA award.

THIS WEEKEND ON THE RADIO. The QRP ARCI Spring QSO Party on CW, sponsored by the QRP ARC International, runs from 1200z April 8 to 2400z April 9. Exchange signal report, state/province/DXCC country, and ARCI number if a member. Non-members send output power instead of ARCI number. For more info, see page 123 of March QST.

From: joejarre@netcom.com
Message-ID: <joejarreD6Mwq8.1K2@netcom.com>
Source record: 249114

Bob Wilkins n6fri (rwilkins@ccnet.com) wrote:
: Gary Coffman (gary@ke4zv.atl.ga.us) recently wrote
: in <1995Apr4.133803.388@ke4zv.atl.ga.us>:

: : Given that there'd be no difference in the filing between a regular
: : amateur license and a special repeater license, why in the world
: : do you want hams to have to do that? Isn't their ordinary call sign
: : sufficient identification? I'd think it would just add confusion to
: : have one person with several different calls.

: Perhaps Joe, and other locally recognized frequency coordinators, would
: like to see a mechanism in place to signify the local coordination and the
: entry in the single point of contact data base. Those amateur stations in
: repeater service that are coordinated would be able to sign with their
: distinctive repeater station callsign. Those repeater stations in the
: testing phase of coordination would sign their trustees callsign.

While that's an interesting idea Bob, I'd have to say I'm not in favor of
it. And Gary, a repeater is a different enough entity that yes, they
should have unique licenses and calls.

I am trustee of one club repeater that has my call sign on it. My ego
doesn't require that reinforcement so I'd just as soon it have it's own
call.

I would go so far as to suggest that the FCC NOT issue a repeater license
without a piece of paper from a _recognized_ coordinating body saying the
repeater is coordinated.

Yep, the infostructure is not in place on ANY level to do this. It ought
to be.

477. Re: ARRL Membership

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-06 00:00:00 UTC
From: jlamar@yrkpa.kias.com
Message-ID: <3m1s14$6gn@yrkpa.kias.com>
Source record: 249115

If you do join, seriously look into the ARRL equipment insurance plan.
Our repeater site has taken 2 hits over the past 5 years, and the
plan covered everything, both times.

Several groups in the area 'wished' they had it when it was too late.
Just one of the fringe benefits.

I've had a dual band in my 83 Camry for 2 Years now mounted on the
side of the shift. Despite claims of problems I've had none at 50
Watts

480. Icom Z1A Mods?

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-06 00:00:00 UTC
From: Michael Bonham <mgbonham@delphi.com>
Message-ID: <B6w9QQr.mgbonham@delphi.com>
Source record: 249118

Does anyone know about any mods for the Icom Z1A? I am looking for any of the mods that might be available. It is a fairly new radio, and they don't send the schematics with the radio. I'd appreciate any info someone might give to this. Thanks
Michael Bonham

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 06/2330Z APRIL 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 06 APRIL AND FORECAST FOR 07 APRIL - 09 APRIL

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 72/8

GOES satellite data for 05 Apr
Daily Proton Fluence >1 MeV: 4.8E+04
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 7.3E+06 (normal)
X-ray background: A1.2
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
07 Apr 08 Apr 09 Apr
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 07 Apr: 75/13

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet

Estimated Indices : A K Observed A Index 05 Apr
Learmonth 4 2211 1121
Fredericksburg 5 10
Planetary 5 7

Observed Kp for 05 Apr: 2213 2132
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
07 Apr 20 Unsettled to active
08 Apr 25 Active to minor storm
09 Apr 30 Active to minor storm
COMMENT: IPS Geomagnetic Warning 10 was issued on 5 April and is
current for interval 7-9 April.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
06 Apr normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
07 Apr normal fair poor
08 Apr fair poor poor
09 Apr fair poor poor

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
06 Apr 40 10 to 20% above predicted monthly values

Predicted Monthly T index for April: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
07 Apr 35 10 to 20% above predicted monthly values
08 Apr 15 Near predicted monthly values
09 Apr 15 Near predicted monthly values
COMMENT: Degraded HF comms expected 7-9 April.
Observed Townsville MUFs: near predicted monthly values.
Observed Hobart MUFs: 10-20% enhanced.

>neil_fullagar@ccgate.apl.com

This "feature" is described in my 742 manual. Look under transmit
warning or something like that. I don't have a manual available right
now or I would look it up. I actually tried this out for a few days
but it started to annoy me, so I reset it. 73 and email if you can't
find it.

Reply-To: Richard Hieber <sz0026@daphne.rrze.uni-erlangen.de>
Archive-name: qrp-clubs-list
Last-Updated: 1995/03/22

---------- Begin of The QRP Clubs List ----------

==========
THE QRP CLUBS LIST The QRP Clubs List
Version 0.97
March 22, 1995
Compiled by Richard Hieber, DL8MFQ/AA8CP.
Email: <sz0026@daphne.rrze.uni-erlangen.de>
Packet: [dl8mfq@db0sif.deu.eu]

~Subject: The contents:

This file contains information about the following QRP clubs:

o 9A-QRP Club
o Arbeitsgemeinschaft CW / Activity Group Telegraphy (AGCW-DL)
o QRP Club ARI
o QRP Amateur Radio Club International (QRP ARCI)
o Benelux-QRP Club
o Grupo-QRP do Brasil
o QRP Club of British Columbia (BC QRP)
o QRP Society of Central Pennsylvania (QSCP)
o Cleveland QRP Amateur Radio Club
o Colorado QRP Club (CQC)
o CW Operators QRP Club
o EA QRP Club
o G-QRP Club (G-QRP-C)
o Italian QRP Club (I QRP)
o JARL QRP Club (JA-QRP)
o MFJ 90's Radio Club
o Michigan QRP Club (MI QRP, M-QRP)
o The QRP Club of New England (NE QRP)
o The QRP Club of Northern California (NorCal QRP)
o NorthEastern Illinois QRP Society (NEIQS)
o The NorthWest QRP Club (NW QRP)
o NorthTexas QRP Club (NorTex, NQC)
o OK QRP Club (from the Czech Republic)
o Oklahoma QRP Club (OK QRP)
o St. Louis QRP Society (SLQS)

o U-QRP Club
o WI QRP Club
o ZS-Algoa QRP Group

The ordering of this list is somewhat arbitrary though it tries to follow the alphabet :-) No weighing is intended.

Two list entries here are somewhat special:

- The "MFJ 90's Radio Club" is focussed on the MFJ 90xx series of QRP transceivers but not affiliated with the company. Rather than being a club it is more a newsletter and its readership.

- The "AGCW-DL" is not a QRP club but rather a CW club. It is in the list because of its strong QRP activites and because there is no dedicated German QRP club.

In addition to all that you'll also find information about defunct clubs and newsletters, ceased activities, 'unofficial' groups and a small paragraph about the world famous INET QRP Club ;-)

Spelling and punctuation tries to follow European standards.

~Subject: The format:

ABBR: Abbreviation
FULL: Full name
PRES: Club President
ADDR: Contact address for membership and info
SINC: In existance since ...
COST: Membership cost (yearly)
NEWS: Club newsletter, name and frequency
NUMB: Current membership numbers (approximately)
MEET: Regular meeting
QNET: QRP nets, 'on the air' meetings
PROJ: Previous and current projects
TEST: Contests, activity periods
AWRD: Awards
COMM: Comments

The NUMB entry is only meant to give a rough indication about how big the club is. The numbers given are not precise and cannot be. The number of active members is not equal to the last issued membership number - some former members are SK now or have left the club. A good indication of active membership numbers is the number of people that subscribe to the club newsletter.

The PROJ entry isn't meant to be a listing of all the building projects that any club member has ever done. Rather it should list all the projects that were designed by a club member, were realized by several others and are available as a circuit diagram, kit or

whatever. This entry shows you where household names like 'Epiphyte'
or 'Sierra' originated.

Similar story with the TEST entry: It is not a list of activities the
particular club *participates* in, but rather a list of activities
that *originate* within the club. There is no space to give details.
By supplying the name everybody can see that a special activity exists
which will give him the starter to ask for more information.

I would also like to supply information about regular 'on the air'
meetings of the clubs (entry QNET). If you know about such activities,
please notify me; my address is at the end of this file.

In this revision of the QRP Clubs List lots of entries are empty,
because information is missing. I didn't delete them to encourage
feedback so that I can make the list more complete. But I know it
looks stupid - so this will change in future revisions of the list.

Addresses in <brackets> are Internet email addresses; those in
[brackets] are valid in the Amateur Packet Radio network.

~Subject: Defunct clubs and newsletters, ceased activities:
---

o QRP society of the UK (1949-1964?)
o Pacific Amateur Radio Group (?)
o Illinois QRP Society (ILQRPS) (?)
o "K5FO QRP newsletter" (1994)
o "The Milliwatt" (1970-1975)
o EA8 QRP-DX Club

~Subject: 'Unofficial' groups:
---

o The DRAGONSLAYERS QRP Group

This is mainly a Dutch group of amateurs with guest members
from two other countries only. Dick Pascoe, G0BPS, is the only
~~~~~~

British member. Three Germans are also members being a family, husband, wife and son. There are no membership fees, no magazine, no contests etc, just a group of friends. Membership is by invitation only!

o Zuni Looper Mountain Expeditionary Force

This is a local gathering of QRP ARCI members in Southern California, who operate Field Day with QRP; the name refers to the particular part of the State or National Park they always operate from (the Zuni Loop area of the park). They are well known and admired for the *HUGE* wire antennas they erect.

o Maryland Milliwatt Club

The club was founded in 1992 by two members. Membership is by invitation only. Mailing Address: Maryland Milliwatt Club, 3052 Fairland Rd, Silver Spring, MD 20904.

o World QRP Federation (WQF)

The only thing I know is that Gus, G8PG is president. I suppose it's a kind of QRP cover organisation. Can anyone give more info on this?

o The WVQRP Commandos

o The LIMARC QRP Heavy Hitters
(LIMARC = Long Island Mobile Amateur Radio Club)

o Old Coots QRP Group

~Subject: Acknowledgments:

I was using the club list maintained by Bill Kelsey, N8ET, as a basis for this list. Much later when perusing the QRP-L archives I discovered that Chuck Adams, K5FO, had already compiled a list which contained clubs that I didn't know about. Additional information came from other contributions to QRP-L and from assorted printed material, most notably publications of the G-QRP Club. Thanks for very helpful contributions and corrections from (sorted by callsign):

attempts are made to use the latest version.

The editor makes no guarantee as to the usefulness of the information
provided herein. The editor takes no responsibility for any damages
resulting from the information provided in this list. If you are in
doubt, please post a question to the QRP-L mailing list or ask your
local elmer :-)

~Subject: Update information:

This is what I call a beta version of the QRP Clubs List. I intend to
to make this list up to date and as complete as possible. Therefore I
need your help.

If you find outdated information or errors in this list, please let me
know. If you know of any QRP club that you feel should be in this
list, then let me know, too. The same applies if you have ideas on how
to improve this list. Since English is a second language to me, I'd

also be grateful for hints on mistakes with grammar or vocabulary.
Please note that I try to stick to European conventions in spelling
and punctuation 'cause this is what I learned in school.

For the most up-to-date copy of this list, send email to
<sz0026@daphne.rrze.uni-erlangen.de> or a packet radio message to
[dl8mfq@db0sif.deu.eu]. From version 1.00 onwards this file will be
available via a FTP site also (probably SUNSITE.UNC.EDU).

485. This Week in Amateur Radio Edition #106

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-07 00:00:00 UTC
From: kxkvi@delphi.com
Message-ID: <5Q+-wsv.kxkvi@delphi.com>
Source record: 248880
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

Here is a summary of news items covered on edition #106 of "This Week in Amateur Radio", North America's satellite-delivered audio bulletin service, for the week ending 14-Apr:

1. FCC Approves New Call Sign Prefixes for Alaska, Hawaii, and Puerto Rico
2. W5YI Petition to Banish Bulletins Below 30 MHz Assigned FCC RM Number
3. Commission Denies Request to Revisit Amateur License Restructuring
4. ARRL Announces New SAREX Frequencies for STS-71/MIR Docking Mission
5. League President Back Home, Operating 40 CW, Therapy to Begin Soon
6. "EZSATS" with Dave Mullenix, N9LTD
7. US Astronaut Norm Thagard Making Voice Contacts While Aboard MIR
8. Weekly Propagation Forecast with George Bowen, N2LQS
9. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
10. Senate Commerce Committee Takes Up Computer Data Decency Issue
11. "Amateur Radio Newsline" - Edition #921 from Los Angeles
12. Upcoming Special Event Stations
13. "RAIN Dial-up" from Chicago

Funding for the program's transmission, uplink, and production expenses was provided this week by a grant from the Boise County Amateur Radio Club in Boise, Idaho, where "This Week in Amateur Radio" is heard on the WA0MXN repeater on 145.25 MHz, serving Boise, Meridian, and Garden City.

"This Week in Amateur Radio" is a weekly amateur radio news and information service, in audio newsmagazine format, which is produced by Community Video Associates, Inc., a non-profit, charitable, tax-exempt foundation based in Albany, New York. The program is carried on the "Omega Radio Network" each Saturday at 7:30 PM (EDT) on the Telstar 302 commercial communications satellite, transponder 21 (11V), 5.8 MHz wideband audio (4.120 GHz), located at 85 degrees west longitude in geosynchronous orbit, and can be heard on various VHF/UHF repeaters throughout the United States and Canada, as well as on 160 meters at 1860 kHz. Contact your local amateur radio club or repeater operator if "This Week in Amateur Radio" is not being heard in your area.

Production and transmission expenses are underwritten by contributions from repeater system operators, amateur radio clubs, and individuals. For further information, contact George Bowen, N2LQS, at 518/283-3665, or Stephan Anderman, WA3RKB, at 518/664-6809. You may also reach them via amateur packet @ WA2UMX.FN32AW.ENY.NY.USA.NA and on various landline bulletin board services.

490. WB7TPY via telnet?

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-07 00:00:00 UTC
From: sz0026@cd4680fs.rrze.uni-erlangen.de
Message-ID: <3m3k03Ecch@uni-erlangen.de>
Source record: 248885

Hi there,

for a friend of mine I am searching for the telnet address
of the internet - packet radio gateway that WB7TPY is
running. Especially the telnet address in numbers (not the
mnemonic one) is what is looking for.

I've looked at the callsign server at
callsign.cs.buffalo.edu, but quite predictably I found
nothing. Possibly there is something in the
"hams_on_usenet" listing but I wasn't able to grab a copy.

Email welcome.

Richard, DL8MFQ/AA8CP

Gee, you Certified Flight Instructors sure make me nervous about all
those little airplanes flying around. Maybe the airlines are right
and we should get them out of the sky so that its safer. If they're
not talking on ham radios then they are probably talking to the
airport or traffic control and not paying attention to keeping the
wings level.
I remember when I asked an old guy out at the flying field which was
the safest airplane. "The safest airplane?", he said, "The safest
airplane is an airplane that's on the ground!".

HamCom, which is also the ARRL Texas State Convention this year, is June
9-11, 1995, at the Arlington Convention Center. Preregistration deadline
is June 1.

The info line is (214) 442-1721, or you can drop a note to
Ham-Com, Inc.
P O Box 861829
Plano, TX 75086
and ask for a copy of the Ham-Com Newsletter, which should be coming out
any day, now. It contains a copy of the registration form, as well as
details of where, what, and how.

I've been using the PK88 for 4 years here almost daily for access to the DX Cluster. Has worked perfectly for that time. Seems to be one of the cheapest, though the PK12 is, according to ads, now a replacement for the PK88. Seems pretty similar.

Here in the UK the price is typically 140 Pounds. Guess it will be less than 140 DOLLARS in Canada! Big mark ups here, but that's another story (or thread)!!

As someone pointed out earlier this week, all K1MAN needs to do to
circumvent this is to have one other station in contact with him;
then he's not broadcasting.

This petition is a lousy way to deal with the perceived problem.

Besides all the mods for the ICW2A there is another to allow TX on a single band while quieting the other band in dual band mode. Currently if your in dual band mode and TX on UHF, the VHF channel still has audio or vice versa. This can get annoying. Does anyone know what this mod is? I looked in the known sites such as oak.oakland.edu, but no luck.

yes, but SW operation lets one station get to a large area w/o having lots of intervening stations and the complexity of finding all the folks to man all this repetition of the story...

not to mention time lag -- it'd be like some of the packet traffic that announces there was a hamfest last week next week.

this could be the Incentive Licensing for the 90s. could be all HF nets would be out the door since they run in a "one to many" mode (broadcasting) rather than a one-to-one mode...just a matter of interpretation.

You're thinking of the IC-2SRA. I have one stilling here beside me.
It has a 2 meter handheld and full range scanner built into the same
handheld shell.
I really like mine (so much so, that I bought a second one used) and
another club member has one and likes it a lot also. Of course, you can't
get *any* full range scanners now in the USA (they have to lock out those
evil cellular frequencies). It's weak points are a slow scan rate
(compared to other scanners) and *only* 60 memories on the "scanner side."
This whole line of radios have been discontinued (except for the
receive-only R-1), but you do see them occasionally for-sale used.
Hope this info helps...

Did you want only one band showing? If so then hold the Function key down
and depending whether you want only 2 mtr or 440 showing;then
respectfully hit the V Main or U main key down while depresasing the
Function key.You should then see only one band displayed.

I travel quite a bit, and while I enjoy contacts on .52, I often have
my rig in the bandscan mode (while I'm passing through areas that haven't
been programmed in the rig) so you'd have to call several times to hit
it while the rig was scanning past .52.
Perhaps we should just have big cards with ".52" printed on them, and
flash them and honk as we meet hams on the road.
Or maybe practice calling on .52 on the hour and half-hour.

Ignorance? Hmmmm...

I was simply remarking on how I thought a particular term was being
used in a specific context, not on the origins of the term.

It is also possible that the original poster simply remarking on the
demographic composition of amateur radio with no racial slur intended.

Either way, ignorance has nothing to do with it.

IPS WEEKLY REPORT
---
24 MARCH - 30 MARCH

DATE OF ISSUE: 31 MARCH 1995
INDICES:
DATE 24 25 26 27 28 29 30
10CM 95 92 90 89 84 81 80
A 6 6 20 16 12 19 (9 ESTIMATED)
T 54 54 36 -10 4 13 23

SOLAR ACTIVITY WAS VERY LOW 24TH TO 25TH, AND 27TH MARCH; AND LOW FOR THE REMAONDER OF THE WEEK.

THE GEOMAGNETIC FIELD AT LEARMONTH W.A. WAS QUIET TO UNSETTLED ON 24TH, QUIET ON 25TH, AND UNSETTLED, OR UNSETTLED TO ACTIVE 26TH TO 30 MARCH.

IONOSPHERIC F2 CRITICAL FREQUENCIES AT SYDNEY WERE ENHANCED BY 15 TO 30 PER CENT 24TH TO THE FIRST HALF OF THE UT DAY ON 26TH MARCH. FREQUENCIES THEN BECAME DEPRESSED TO 30 PER CENT, IMPROVING TO 20 PER CENT DEPRESSED EARLY THE NEXT DAY; THEREAFTER FREQUENCIES WERE MOSTLY NEAR PREDICTED MONTHLY VALUES. SPREAD F WAS OBSERVED THROUGHOUT THE DAY ON 27TH.

FORECAST (31 MARCH - 06 APRIL)

SOLAR: VERY LOW.

GEOMAGNETIC: ACTIVE LEVELS EXPECTED 1 APRIL, THEN QUIET TO UNSETTLED. ACTIVE LEVELS EXPECTED 7-9 APRIL.

IONOSPHERIC: DEGRADED CONDITIONS EXPECTED 1-2 APRIL, THEN REMAINING NORMAL UNTIL 7 APRIL.

COURTESY OF THE IPS RADIO AND SPACE SERVICES

SUMMARY BY PAT VK2JPA ANARTS BROADCAST OFFICER

Urunga Radio Convention

Urunga Radio Convention

The Urunga Radio Convention is ready to swing into action on the Easter weekend, 15th and 16th of April. That's just 13 days away.

You still have time to get organised. If you need accommodation, there will be a 008 phone number mentioned shortly, so have a pen and paper handy.

The convention site has easy access throughout the premises to the adjacent parking lot.The hall has a lounge room and all amenities. Tea and coffee are available, no charge.

WICEN representatives will present a display. Other items of interest are the trade displays and trading tables. You are invited to bring your goods for sale. All traders are welcome and enquiries are invited.

Fox hunting will continue almost non-stop throughout the weekend. Foxes are invited to attend and discuss the state of the art, with a view to making transmitters more interesting to locate.

For your family and friends, there are competitions, quizzes, luicky door prizes and television facilities.

There are holiday activities like surfing, bushwalking, fishing and swimming. Local clubs offer golf, tennis and bowls. Bellingen and Nambucca Heads are nearby. Coffs Harbour is 30 minutes away.

Accommodation bookings can be made by phoning the Holiday Coast Turist office on 008 025650. Advise them that you wish to stay in the Urunga district.

For further information contact Ken VK2DGT, Arnold VK2ADA, Brian VK2ZCQ, Merv VK2DMS, all QTHR.

--de Merv VK2DMS

News briefs

NEWS BRIEFS

Those of you visiting the Royal Easter Show this week might like to know that a new FM radio station will be operating during the show. The station, operated by the Film, TV, and Radio School and the Royal Agricultural Society will operate on 96.9 MHz from 7th through 18th April, and all the announcers will be students attending the school's commercial radio course. The school is currently looking for a name for the station: suggestions so far have been E-I-E-I-O Radio, Moo Baa Oink Radio, and Show Radio. If you can think of a better name, why not give the school a call on (02) 805-6443.

****

ABC Radio National is to place transcripts of its special interest programs on Marvel, the Microsoft network, possibly extending it to the Internet later this year. The aim of the exercise is to give the ABC experience in multimedia presentation and to allow other net users to offer feedback and suggestions.

A test version of the Microsoft network software will be available very soon, with a full commercial release scheduled for October. Radio National's new on-line service will include the station's

morning reports on "health, law, education, media and business".

****

AMATEUR SATELLITES LOST IN SPACE

At 0900Z on 28 March, a Russian START rocket, based on the "TOPOL" SS-25 intercontinental ballistic missile, roared into space carrying three satellites--one an Israeli amateur radio satellite built at the Technion-Israel Institute of Technology in Haifa, TECHSAT-1, another a Mexican built MICROSAT called UNAMSAT-1. It was built at the Autonomous University of Mexico under the direction of XE1TU. The third satellite was a Russian constructed spacecraft, the purpose of which is unknown to AMSAT.

After several passes of these three satellite, no signals have been reported from any of them. ANS will report further as information is received.

The rocket for this project was built by the Moscow Heat Technology Institute specialists who originally designed the military TOPOL. These experimental launches are designed to demonstrate the possibility of the large-scale conversion of strategic missiles to civilian uses. The SS-25's, which are subject to arms reduction, are due to be scrapped within two to three years of the treaty's ratification. However, it is obvious right now that the TOPOLs are capable of placing light satellites in orbit at altitudes of up to 1000 km. The Votkino machine-building plant which produced the SS-25 missiles is prepared to convert them to civilian use.

According to further information from ITAR-TASS it is most likely that all three satellites (including Israeli TECHSAT and the Mexican UNAMSAT) launched with the SS-25 rocket on March 28 burned up during re-entry.. It was said, that the launcher may not have reached the final orbit. A committee is currently investigating the lauch failure..

This is only the second time that we have lost an amateur radio satellite due to a catastrophic launch failure, like AMSAT Phase 3-A nearly 15 years ago

--from various sources, including Special AMSAT NEWS SERVICE Bulletin, number 87.01, issued 28th March, Peter Guelzow DB2OS for AMSAT-DL, and the Ostankino Television First Channel Network, in Moscow.

512. QSL ROUTE on IK4LZH: report

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-07 00:00:00 UTC
From: Gianluca Mazzini <gmazzini@deis.unibo.it>
Message-ID: <3m2p87$mqi@sirio.cineca.it>
Source record: 248907

The updatable server for QSL route information
on Internet:

http://promet12.cineca.it/htlzh/qsl.html

is running since 24 January 1995 and start its
full service from 6 February 1995.

In this time more then 3800 queries have been done
and more than 470 hosts have generated these queries.
Actually, about 37000 qsl information are recorded
and available.

All the OM/YL are invited to use this server
to search info for own activity, but also to
update the old one and insert the new in order
to help others DXers.

For all possible problem I am available to help
you and happy to receive all possible suggests and
comments about the service.

73 and good DX de IK4LZH
Gianluca

Conway Yee (yee@mipg.upenn.edu) wrote:
: >There's absolutely no reason to return to that sort of nightmare.
: >The system we are operating under now *is not broke*.

: While I am not saying that the system is broken that repeater
: licensing with all sorts of requirements is required, I do say that
: the current system has some significant flaws. Specifically, I mean
: the existence of paper repeaters. In many populated parts of the
: country, there simply aren't any free frequency pairs available. This
: is not to say that there are repeaters at every pair.

As the state freq coordinator for the Texas VHF-FM Society (we do the repeater coordinations for Texas) the return to repeater licensing must come as more folks want to "play".

Coordinators must have a way to see that coordinations are not ego trips in the Repeater Directory and are placed on the air. There are only so many freq pairs and in Texas areas such as Dallas/Ft. Worth, Houston, San Antonio/Austin are grid locked, with no freq to be had for at least 85 miles out. In some cases the distance is more due to the placement of outlying repeaters.

I have had to several times explain why I could not coordinate a repeater in Temple, TX area that is not a major population center, but is about half-way between Dallas and Austin. This is because there are several systems that are coordinated but not on the air.

We try to keep tabs on these with on air checks and the honor of the owners. This works in about 90 percent of the coordinations. The rest, we spend 90 percent of our time dealing with the last 10 percent.

If you had to be signed off by the local coordinator BEFORE your call for the repeater was issued then there would be a better chance that the system would be used.

This system woudl also cut down the number of uncoordinated repeaters. Tx has very few of those. But, one is too many.

I am a big believer in coordination....it helps make order out of this chaos.

Later Bye...Paul Gilbert, KE5ZW

These codes date back to the old land-line telegraph days. They were used
to shorten messages containing common phrases. There was a whole book full
of these codes; hundreds of them. 73 and 88 are the only ones that have
survived into common amateur useage.

With that much erp (300W and 2 by 15ele) I would guess that under good conditions you be able to work not only the megga-guns but up to 100 other stations, even me !!!!!
The minimum is hard to define, but QSOs have been had with 50W output and a single 9 ele. Me I prefer a comfortable 1.? KW and 4 x 28ft boom antennas.

Building the station is relatively easy, its in operating that the fun really starts !

520. radio show

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-07 00:00:00 UTC
From: FindLine@ix.netcom.com
Message-ID: <3m3fvo$iok@ixnews3.ix.netcom.com>
Source record: 248984

Hi. This is post for any of you out there who might wanna collaborate on writing a half-hour radio show. No, it's not for money. See, a while back I wrote a couple half hour scripts and I was trying to get radio stations interested in them, but nothing. Had to have a demo tape. Here's the deal. If you've got that kind of Monty-Python-vaudeville-absurdist-humor streak in you, and can lay your hands on some kind of recorder unit (like a 4 track), then I think we may have something. I'm not an actor, so if you fancy yourself one, or know of a couple guys you can round up, then voice them on tape, and I can copy and distribute the tapes. If a radio station doesn't bite, I'd like to send them around or sell them as kind of comedy albums. I've Always wanted to start a company like that. You know, comedy records. Not that this is starting a company (I'm as poor as a zinester, but for the worthwhile shtuffs, I'm willing to go without Ramen noodles and generic cola to save the money for this kind of thing), but I think if we work together, it can be done. (There's a market for everything.) You handle the recording, I'll handle the distribution; and we'll both think up the funnies. Okay? Even if you don't want to do an ongoing thing, just want to try 1, email me. I'm rarin' to do this!

re: EME questions
More info
The moon-net info is correct.
With the power level specified and two 15' yagis, you'll be able
to work alot more than the three stations mentioned. PA0JMV, Joe,
has worked over 400 different stations on 2M EME using two yagis.
He's the most successful two-yagi station ever, but just to let
you know that much more is possible than stated in the previous
note.

: >1. Has anyone ever successfully converted a Dow-Key relay solenoid to 12V?
: > (problems fitting more wire in the housing or re-sealing the housing?)

I can't remember if I've actually taken apart a Dow-Key--I've had a fair
amount of luck finding 12 V Dow Keys. But, there is no problem with
fitting more wire into the space. All you have to do is replace the
wire with thicker wire, filling the same volume. The wire diameter
varies as the square root of the desired voltage ratio.

: >4. Where can I buy 12V coaxial relays (new or used) at a reasonable price?

Henry Radio is selling imported Japanese relays that they use on their
amplifiers. I doubt that they are competitive with the hamfest specials
that I buy. It helps to go to a lot of hamfests--I've probably gone to 100+

Hello.
I would like to do ham radio in Canada. But I do not know how.
I've been trying to find out any info. Now here is the questions:

1.Where, when and how can I take the exams?

2.Do I have to begin from beginner's level?
(like no HF or CW only or whatever)

3.Are there any study manuals available?

BTW, I'd been doing ham radio for 10 years in Japan and I have a
Japanese licence. So I know about ham radio (at least basic).

Thank you for your help.

: 51: handshake

Well actually:
73: Regards (note plural)
88: Love and kisses (or hugs and kisses), usually expressed to op sex
other numbers: never heard of those!
73 and 88 is pretty much universal. Others get alot of use in North America, including OM (Old Man) YL (Young Lady) XYL (Wife, ex-Young Lady, although most married women hate that term), and others. Most of these are used in CW (code) contacts, as well as many other abbreviations, to make the contact go faster, but you do occaisionally hear them on voice. Then there are the universal "Q" signals, again mostly used with CW, but still some come out on voice, the most common being QSL...

So to summarize, 73 and 88 are the only numbers I know about on the ham bands, but you will hear other jargon at times. Hope this helps...

: Well, do you know it all... Does it exist all from 0 to 100 codes
: like this or it just some old stuff... Is it really international code...

I know the original question was about trucker-hams that are also on internet, but since the original question came from a Colorado resident, thought I'd just post a piece about one of his "neighbors", Wayne WZ0Z who drives an 18 wheeler from Omaha to Chicago on a regular basis. Wayne, as far as I know, isn't on internet, but I do enjoy working him cw mobile from his tractor. Although I work a lot of cw mobile stations, I think he's the only trucker I've found in that category.

527. Automobile RFI problem, Help! again...

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-07 00:00:00 UTC
From: brunelli_pc@delphi.com
Message-ID: <ho0-lkh.brunelli_pc@delphi.com>
Source record: 248991

Here is the dope on a problem with a mobile installation
in progress. I have posted before and my thanks to
all who responded and for all of their excellent advice.
None the less, i still have the problem! Here is the
update (he says, shaking the garage floor grunge from his hair)
on this most desperate of situations.

CAR = Isuzu Trooper II, 1991
Antenna = Outbacker Perth
Radio = Ten Tec Scout

The antenna is mounted on the spare-carrier, using a bolt-thru
hamstick mount. I have 2.5 feet of tinned braid running around
the coax, soldered to the PL259, and bolted to the door hinge.
This works! Nice ground strap.

I have done a substantial bit of RFI snooping in
my Isuzu Trooper. The problem is an s-9 white
noise while the engine is running. When i pull
the antenna from the mount, the noise disappears.
this is consistent with a radiated noise source.

My initial "AH-HA!" came when i pulled the fuel pump
fuse and the noise dropped, not all the way, but i could
live with s-3 noise.

BUT, I took a length of coax with a pl259 on one end and
the other end stripped back and "t"'d to act as a small
snooper antenna. I went through the whole vehicle and found
no noisy devices. I can put the snooper ON the ignition
wires with no appreciable noise. I can put the snooper on
the fuel pump, and on the power leads, and still not much of
anything.

BUT, the noise is heard at the s-9 level of i touch the center
conductor to the chassis of the vehicle. Actually, the chassis
hears pretty well! So the vehicle chassis would appear to be
acting as an antenna, and is just as noisy as the Outbacker.

Any Ideas? Other than buying a new car, that is.
Though donations will be cheerfully accepted ;-)

They have a kit, but it doesn't really convert 12v to 28v. It is a relay
and electrolytic which provides a 24v pulse by putting the charged cap and
the supply in series. After the cap is discharged, only the 12 volts remain
to sustain the relay. Make sure that the 12v gives you enough shove for
maintaining good contact in the coax relay.

By the way, Down East is now further down south in Frenchtown, NJ.

> -Dave, KA3QBQ

When I do road trips with other hams, we tend to use the output of our club (local) UHF repeater. I have also used 446.000 simplex with another ham. He has only an MFJ mag mount dual band ant, which in my opinion is a pretty good dummy load, and an old Yaesu dual band handheld. I run an older Alinco ALR72T single band uhf mobile, into a Comet B20. We get a few miles of range, depending on terrain. I think we would do much better with a decent antenna on his side. Of course having a couple of mountain bikes strapped to the roof doesn't help too much either!

I have made simplex QSO's of over 20 miles on 446 while mobile during the VHF QSO partys. I have often put out a call at other times, and have never heard

a thing. It's a lot different that 2M in this area. Lot's of activity around 146.520.

Re: 161 ...
This number is mainly used by FOC members (First-Class CW operators'
Club) which is apparently a very exclusive group. Most of them won't give
me much details on how one becomes a member. But I did get one to tell me
that 161 = 73 + 88 and essentially means "best regards to you and the wife."

Correct me if I'm wrong!

Now, what does "55" mean? I get this on a lot of German QSL's.

161,
Zack W9SZ

Amen brother!
(Need I mention calculating groundspeed between checkpoints, calculating fuel burn and comparing it to expected plan? A student with time enough to be hamming is not nervous enough about things that could happen.)

Hamming and piloting aren't a very good mix very much of the time and certainly not for a student pilot.

I've always thought that "XYL" for wife (as in ex-young lady) was
rather disparaging. Hence, I have always used the unofficial and never
universally recognized "YF" for "wife."

And, I might add, my YF (who is not a ham nor particularly interested
in ham radio) prefers it and thus it helps improve the "tolerance level"
in my household (she even calls me "OM" sometimes; in an affectionte way,
of course).

73,

Paul, K4MSG

P.S. I first learned of "YF" from Charlie, K4AL, who was always deferential to the
attitudes and feelings of the opposite sex; a real gentleman in every
good sense of the word.

> with a UHF link.
>

If you can spend (want to spend) Doug Hall's voters have a good reputation in the ham and commerical world. The basic Hall card is 4 channel and somewhere <$400.

Now the ham solution: See QST October 92, p.24+. WB2WHC designed a simple 2 channel audio rectifier and comparator circuit. PCBoards from Far for abour $5, the rest of the parts come from DigiKey for <$15. So you get the job donee for under $20 (US Dollars, I almost forgot the post was from North of the boarder).

I run one, like you seem to want to use it. THe "main" repeater site is a rx for the main repeater channel (449.65), and a rx on my link channel (420mhz) which goes into the voter- out to the controller and into the tx. The "satellite" site is just another 449.65 receiver, a simple controller and a 420.xxx Tx, with a small yagi.

The biggest problem is audio matching in this situation. The two audio paths do not exhibit the same frequency response curve. To make the voter work to peak efficiency you want almost completely similar audio responses. One way is to force both receivers through a linking radio (**use the same make/model radios throughout**) even if it is local (disable the PA, and terminate the exciter).

The other method (which I will do when Summer break arrives) is to sweep align the audio from the two, and use an audio equalizer to balance them out. Again QST and WA4TEM have a nice simple 1-IC chip graphic equalizer that should make this project a reality. I think Robin's article was in 1991, but I could be mistaken- I'll dig up the full citation if you need it.

Good luck, have fun
And by all means make your machine hear all those 2w HT's in the area!
(the last thing we need is another alligator 2 meter repeater in the world!)

Change this to pub/XFS_AlphaTest/amateur

Note the mixed case in the path name. This is per my last
visit to fcc.gov, April 7th.

Boy, are some CD maker's gonna take a hit in sales now....
Still, not everyone has SYBASE, nor wants it. Admittedly,
some of the Amateur database suppliers have some good software.

My thanks and appreciation to the FCC for making their database
freely available and updated in such a timely manner. The new
computers sure do seem to be doing wonders for the FCC and us
amateurs.

I am a relatively new ham (about 3 years), and have just gotten bitten
by the DX bug. But before DXCC, I would like to get W.A.S., if
possible. There are a handful of states that I can't seem to work
for the love of Pete! These are the following:

AK
DE
ID
IA
KS
NE
UT
WV

Also, I have not yet recieved confirmations from: CA,CO,IL,IN,KY,
ME,MD,MA,MI,MO,MT,NJ,NM,OH,OR,VA,WA, es WY.

If anybody from these states can help me out, I'd REALLY appreciate it!
I just got my first box of QSL cards, and can't wait to use them!

I can QSO on pretty much any band/mode you can find convenient.
73 es sri fer out of group post (couldn't find more germane in my .newsrc)

The story I was told mentions something about Germany operators
having to put HH at the end of each message during World War II.
HH --> Heil Hitler. Many Germany CW operators would add just one
more dit to each letter making HH --> 55. The ears of the Nazi
gov't with little experience would hardly know the difference and
the German operators wouldn't be "promoting" the main madman in power.

Sounds close enough for me. Someone correct me or add details if needed.

Propagation Forecast Bulletin 16 ARLP016
From Tad Cook, KT7H
Seattle, WA April 7, 1995
To all radio amateurs

SB PROP ARL ARLP016
ARLP016 Propagation de KT7H

Solar activity was down last week, averaging about 14 points below the previous period. April 5 had zero visible sunspots. Solar flux should rise, peaking in the mid nineties around April 17 through 20. After April 26 the flux should be back around 80.

Conditions over the next few days should be disturbed, with a coronal hole having maximum effect around April 9. Watch for K indices around 4 or 5. Conditions should become quite stable after April 13, with the quietist geomagnetic conditions around April 17 and 18. Watch for another disturbance around April 22, with quiet conditions returning at the end of the month.

The best worldwide propagation should be on 17 and 20 meters during daylight, and 20 through 40 meters after sunset. Although the 10 and 12 meter outlook is not good during this low part of the solar cycle, this Spring should yield some openings on these bands over north-south paths during periods of higher solar flux values.

Sunspot Numbers for March 30 through April 5 were 46, 34, 30, 29, 28, 12 and 0, with a mean of 25.6. 10.7 cm flux was 79.7, 76.8, 75.4, 76.3, 75.2, 73.1 and 72.1, with a mean of 75.5.

The path projection for this week is to Mariana Islands (KH0) from Tuscaloosa, Alabama and Tucson, Arizona.

From Alabama 80 meters should be open from 0900 to 1130z, 40 meters from 0800 to 1200, and 30 meters from 1200 to 1330. On some days 30 meters could open up to several hours earlier. 20 meters may open around 0500 and again from 1330 to 1430. Check 17 meters from 2000 to 0030, and 15 meters from 2100 to 0100. On some days 12 meters may be open from 2030 to 2330. Although unlikely, 10 meters may also be open over the same period.

From Arizona 80 meters looks good from 0830 to 1330z, and 40 meters from 0800 to 1430. 30 meters looks good from 0700 to 1500. Check 20 meters from 0430 to 0730 and again around 1430. 17 meters should be open around 2000 to 0500, and 15 meters from 2030 to 0300. Check 10 and 12 meters from 2100 to 2300.

> We don't seem to have addressed the hard problem here, well, er, hard
> for those who don't contest....

The problem is hard for all of us. The issue isn't about contesters/non-contesters, but simply a matter of QRM due to overcrowding.

> Some hams don't contest. And they have just as much a right to get on
> and use the bands.

Agreed. Every amatuer has an EQUAL right to use the amatuer frequencies in pursuit of amatuer radio. Note the word EQUAL. That means that the contesters and non-contesters have no priority or preemption over one another.

> You know what happens. It doesn't matter how long they have been there,
> or how strong their signals are (or how weak), they will be squashed
> by the contesters, one after another, mostly quite shamelessly.

How do you mean "squashed?" Sure, when the contest starts, an otherwise quiet band will rapidly fill to capacity with signals. This means increased QRM, for sure. An easy rag-chew might become more difficult. But since no operator has priority over another, everyone must live with this problem.

NO ONE has a "right" to QRM-free frequencies, even on a crowded band.

If by "squashed" you mean contesters fire up a "CQ CQ Contest" right on top of a QSO -- this is considered reprehensible behavior even in the contest community. Most contesters will ask "Is the frequency in use?" or QRL? before firing up. When they ask, those rag-chewers better respond quick!

> I am always amazed (probably shouldn't be after all these years) to
> get on a 40 meter net clear frequency and have a contest start. Every
> 30 seconds someone comes up without asking whether the frequency is
> clear and just starts talking.

Really? Every 30 seconds? I find that to be a bit unbelievable. Aren't these nets transmitting anything themselves?

As a sometime contester, I have had experiences where I have asked if the frequency is in use, called CQ, worked a couple of people, only to have someone pipe up on frequency and tell me it is in use. (Note, they didn't tell me the first time I asked, and I always ask at least twice!)

Further, I have stated on frequency and listened for several minutes only to hear NOTHING. How can a frequency be in use if no one is transmitting for several minutes at a time?

There's a similar rudeness in some non-contestors, who deliberately QRM contest stations. Rotten apples in each barrel, so to speak.

> When I operate a contest I very carefully check frequencies and try to
> avoid QRM'ing ongoing contacts, and I know many others that do it too....
> but we don't seem to be in the majority.

I think we are, Clark, it is just a few rude operators give us a bad name.

For those who don't want to contest, here's a few tips on "contest avoidance":

1. Use the "contest free" bands of 30m, 17m, and 12m. You should never hear CQ Contest on these bands.

2. Stay high in the band. Contest activity is more intense lower in the band.

3. Switch modes. Use phone during CW contests, CW during phone contests. RTTY or packet during all but RTTY contests. This strategy has the added benefit of avoiding operators who are involved in the contest.

Want to use PRO 39 and Yaesu FT 207R in the car using the 5/8 wavelength mobile antenna at the same time. Just wondering if there is any way to use the both equipment using the single antenna. Will the scanner be damaged if I use the HT. I am thinkin of putting an adaptor which will split the antenna terminal into two terminals. Any suggestions? Please post or reply.

Bishwa Shrestha, KC7JFV

Before sending the HT in for repair, have you tried:
1) Using the memory/CPU reset procedure listed in the manual.
2) Removing power for at least a day.

If neither one of these works, then try the techs. You can use the
factory service center in Long Beach CA, or one of many smaller shops.

Good luck...

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 07/2330Z APRIL 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 07 APRIL AND FORECAST FOR 08 APRIL - 10 APRIL

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 71/6

GOES satellite data for 06 Apr
Daily Proton Fluence >1 MeV: 7.5E+04
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 5.8E+06 (normal)
X-ray background: A2.1
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
08 Apr 09 Apr 10 Apr
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 08 Apr: 75/13

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled to active until 12UT and
storm levels thereafter.

Estimated Indices : A K Observed A Index 06 Apr
Learmonth 44 4344 6655
Fredericksburg 40 4
Planetary 70 4

Observed Kp for 06 Apr: 2110 1123
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
08 Apr 40 Active to minor storm
09 Apr 30 Active to minor storm
10 Apr 20 Unsettled to active
COMMENT: IPS Geomagnetic Warning 10 was issued on 5 April and is
current for interval 7-9 April.

3A. GLOBAL HF PROPAGATION SUMMARY

LATITUDE BAND
DATE LOW MIDDLE HIGH
07 Apr fair-normal poor-fair poor-fair
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
08 Apr poor poor poor
09 Apr fair poor poor
10 Apr normal fair poor

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
07 Apr 43 10-20% enhanced 00-04UT, 30-100% enhanced 05-14UT and
15-40% depressed thereafter.

Predicted Monthly T index for April: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
08 Apr -30 20 to 40% below predicted monthly values
09 Apr -10 10 to 30% below predicted monthly values
10 Apr 10 Near predicted monthly values
COMMENT: IPS HF Warning 14 will be issued 07/2330UT.
Observed Townsville MUFs: 30-50% enhanced during local night.
Observed Hobart MUFs: 15-40% enhanced until midway through
local night.

555. Maritime Mobile Nets???

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-07 00:00:00 UTC
From: tom.alldread@kbsbbs.com
Message-ID: <950407182101201 33@kbsbbs.com>
Source record: 249019

Greetings All:

A friend of mine is planning a trip down the East Coast, through the Panama Canal and back up the West Coast to the Vancouver Island area on his sail boat. He would like a list of maritime mobile HF and/or VHF nets that could be useful for him on his trip. I wonder if anyone on this conference has a list of maritime net frequencies that could be sent to me? Any information that could help him out would be appreciated.

Thank you in advance for any helpful responses.

556. DSP & mobile operation

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-07 00:00:00 UTC
From: tom.alldread@kbsbbs.com
Message-ID: <95040718210120134@kbsbbs.com>
Source record: 249020

Greetings All:

I wonder if anyone on this conference that has used DSP to
improve mobile reception would let us know how well it works?

Quite often when I am mobile on 40 there is quite a bit of hydro
noise from the lines along the highway right-of-ways and I have often
thought DSP might be a big help under such conditions. Also I wonder how
it handles the classic ignition noise problems and also the noise from
the modern automotive electronics?

I wonder if anyone has come out with a DSP firmware package that
is specifically designed for the mobile environment?

73 de VE7TMA

LL>
LL>Yet another question: many ARRL bulletins and Sitor Telexes have 4
LL>Ns at the end: what does NNNN mean, anyway?
LL>

In todays computerlinguistic world we would call it EOF for end of file.
In the days of electromechanical automated message switching systems it
was part of the end of message protocol. It has carried forward into
more modern systems because of "backward compatibility" issues during
the transition.

561. This Week in Amateur Radio Edition #106

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-07 00:00:00 UTC
From: kxkvi@delphi.com
Message-ID: <xy3e4qt.kxkvi@delphi.com>
Source record: 249025

Here is a summary of news items covered on edition #106 of "This Week in Amateur Radio", North America's satellite-delivered audio bulletin service, for the week ending 14-Apr:

1. FCC Approves New Call Sign Prefixes for Alaska, Hawaii, and Puerto Rico
2. W5YI Petition to Banish Bulletins Below 30 MHz Assigned FCC RM Number
3. Commission Denies Request to Revisit Amateur License Restructuring
4. ARRL Announces New SAREX Frequencies for STS-71/MIR Docking Mission
5. League President Back Home, Operating 40 CW, Therapy to Begin Soon
6. "EZSATS" with Dave Mullenix, N9LTD
7. US Astronaut Norm Thagard Making Voice Contacts While Aboard MIR
8. Weekly Propagation Forecast with George Bowen, N2LQS
9. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
10. Senate Commerce Committee Takes Up Computer Data Decency Issue
11. "Amateur Radio Newsline" - Edition #921 from Los Angeles
12. Upcoming Special Event Stations
13. "RAIN Dial-up" from Chicago

Funding for the program's transmission, uplink, and production expenses was provided this week by a grant from the Boise County Amateur Radio Club in Boise, Idaho, where "This Week in Amateur Radio" is heard on the WA0MXN repeater on 145.25 MHz, serving Boise, Meridian, and Garden City.

"This Week in Amateur Radio" is a weekly amateur radio news and information service, in audio newsmagazine format, which is produced by Community Video Associates, Inc., a non-profit, charitable, tax-exempt foundation based in Albany, New York. The program is carried on the "Omega Radio Network" each Saturday at 7:30 PM (EDT) on the Telstar 302 commercial communications satellite, transponder 21 (11V), 5.8 MHz wideband audio (4.120 GHz), located at 85 degrees west longitude in geosynchronous orbit, and can be heard on various VHF/UHF repeaters throughout the United States and Canada, as well as on 160 meters at 1860 kHz. Contact your local amateur radio club or repeater operator if "This Week in Amateur Radio" is not being heard in your area.

Production and transmission expenses are underwritten by contributions from repeater system operators, amateur radio clubs, and individuals. For further information, contact George Bowen, N2LQS, at 518/283-3665, or Stephan Anderman, WA3RKB, at 518/664-6809. You may also reach them via amateur packet @ WA2UMX.FN32AW.ENY.NY.USA.NA and on various landline bulletin board services.

562. Text in Pakratt II

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-07 00:00:00 UTC
From: Floydjr <floydjr@merlin.nando.net>
Message-ID: <Pine.SUN.3.90.950407233231.25241B-100000@merlin.nando.net>
Source record: 249026

I am running Pakratt II for windows and have a slight problem. The colors that you use in the background are controled by the control panel in windows. The text in the recieve window is controled by Pakratt. The bottom window which shows what you are typing is in black. I need to change that color so I can use the control panel and select a dark color for the background. I do not seem to change it, no matter what I do. Any help would be appreciated.

Before I get flamed I did post this in the radio.dig group and did not get a response so I thought I would ask here.

Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.amateur.homebrew,rec.radio.swap

Does anyone have any information of Motorola P100 Cloning? I would like
to transfer one P100's information into the second one. What kind of
cable would I need, does anyone know the pinning?

Jeff - you may be at least partly right, at least at 20 wpm. We don't
give too many of those (I'm sure you don't either) but at that speed most
people will have both solid copy and 7 of 10 right (on the
fill-in-the-blank). Your example of atrocious copiers still passing the
multiple choice, presumably on the basis of educated guesses and partial
copy, is the reason why our team will NEVER give multiple choice CW exams
unless our VEC mandates it (we're with the ARRL). And if they do we may
shop around for another one that doesn't. I know there are some local
hams who bypass our sessions because of our position on this, but I really
don't care since we're busy enough as it is and I don't usually get home
until after 11 pm on testing nights.

rGarry,
Had a wonderful QSO simplex for about 1 hour with a trucker
on 2 Meter Simplex, driving West in Texas/New Mexico on Interstate 10.
I had my simplex monitoring frequeny posted in the back window
of the car. It was one of the most delightful QSO's in my amateur
experience.

: a thing. It's a lot different that 2M in this area. Lot's of activity around
: 146.520.

Well, the best simplex QSO I've had on 446.0, was about 350 miles...
Then again, the other end was at about 30000 feet :)
(AES airplane) We were using 446 between vehicles on the way back from
a swap... The AES guy hopped in, and we had a nice little chat...
(We were in NE Ohio, and they were flying back to Milwaukee from the swap
we went to)

Normally, when travelling, I keep 146.52 and 446.0 on my radio...
Over Christmas, I ended up talking to a guy about 1/2 mile ahead of me,
in a big traffic slowdown... Was alot of fun...

Clem, the voters I've worked on put a 1950 Hz tone on the line while the receiver is muted. When the receiver gets an input above the squelch threshold, it unmutes and drops the 1950 Hz to the voter. The voter then selects the audio signal with the lowest amplitude (because the audio at that point is signal-plus-noise and the levels are, supposedly, the same so the audio signal with the smallest amplitude has less noise than the ones with greater amplitude) and retransmits that one.

I didn't build this voter. It's a commercial product that's about 30 years old. If you can come up with DSP for the same purpose I'd be interested in seeing it.

>other radios to recommend?

I've had one of these for about 6 months now, and can reccommend it highly. It is small and light enough to be convenient to carry with me on a fairly regular basis. Although the functions can be a little intimidating (even to a propeller-head like me) once the thing is set up it is a breeze to work. I have always gotten good signal reports, and with the stock duckie and battery pack I am full quieting on a repeater that is a good 30 miles away. For such a wide Rx range, I have not had any noticable problems with intermod, even though I live right in the middle of the "big city."

One caveat, I don't use the radio that often. I average about one contact a week. (Real life doth intrude... :) It is a nice thing to have handy though, especially with a car like mine...

I have heard that the new Radio Shack 2m is a nice one, although I haven't seen it yet. It should be comparable in price, and seems to be in features as well. The Kenwood is mod'able for out-of-band Tx, and although I have not done it, I have heard from reliable sources that it works.

Hope this helps,

Doug

What you want to do is reset the radio by pressing "MR" "VFO" and the "2"
key while turning the radio on. Then once on press VFO and see if problem
is gone, if not do reset with "MR" & "VFO" while turning on. Again once
on press VFO and see if problem is gone, if not repeat last procedure.
after all this you may want to press "A" & "B" keys while turning radio on.

Hi,
I have that exact setup in my auto and i use an antenna relay that is
switched whenever I throw the switch to operate the 2 mtr rig. It works fine
and I have no problems withthe setup. The only thing I do is make sure I have
the scanner turned off befor I use the transmitter, although there were a few
imesthat I forgot to do that, but never had any problems with the scanner.

If you're out on the open road, try 145.000 for the Hi-Way Simplex freqs.
Traveling same direction, move up to 145.10, traveling opposite directions,
move down to 144.90....

That's where all the pikers and truckers are!!!

No Flames Please, I didn't set up the frequency, the ARRL did so blame them...

Gary - N0ZOI

592. Re: Not much 2-m on the hw

Message-ID: <3m62g5$5f6@thor.inlink.com>
Source record: 248931

If you want to talk to pikers and truckers on the open Hi-Way use
145.000, If you are traveling in the same direction, move up to 145.10,
if in opposite directions, move down to 144.90.

Most HAMs, including myself has taken the suggestion by the ARRL bandplan,
to use these frequencies when mobile on the highways.

If I'm on my base, You might find me on 52, but when traveling, I follow the
ARRLs suggested bandplan, and the most likely spot to make contact 145.000

Gary - N0ZOI

>the long haul.

I have purposely attempted to steer clear of this string, but I finally decided I should add my two cents.

Yes, ham radio is a rich man's hobby, but there are ways around it. As for contesting, there are ways a broke operator with a modest station CAN compete:

1) Most contests have several entry classes: Single op, low power; Single op, single band; single op, QRP; etc etc. Enter one of the categories that will best suit your station (Sorry, no contest that I know of offers a "Single op, dipoles only" category!)

2) Find a friend who is willing to let you operate their station during a contest. This is quite acceptable in the contest community (Assuming they won't be in the contest themselves!)

3) Get involved with contests that have power limits. The North American QSO party has a 150w power limit (or is it 100w? At any rate, no amps are allowed).

4) Use your club's station (assuming your club has a station). You might even generate some interest among club members to try it out. Some will be interested, others won't. (See the string "Boring Hams" for more info).

5) Narrow your focus, if you want to be serious about it. Winning the World or the United States during a contest in ANY entry category is going to take lots of time and effort to develop your skills. I've been contesting for eight YEARS and still haven't won the US or the world in any event. Try shooting for winning your state, or your call zone; if you choose your entry category carefully, and with some research, you just might be surprised at the certificates that end up on your wall.

Philosophically speaking, if you want to be REALLY competitive, you're going to have to spend some money. The same goes with any other activity; the more equipment you purchase, the more flexible your options (and, theoretically, the more enjoyment you will have).

I see three tiers of contest operators:

3) The guys who get on for the weekend to poke around and have fun. This is the most essential of the three, for they make the contests possible in the first place. Without this group, there wouldn't be enough people to work in a contest to make it worthwhile.

2) The guys who are serious enough to go for a major effort, but are limited by antennas, power, undeveloped skills, etc. They're in there giving it a shot, loving it, and know they still need some work.

1) The BIG BOYS. These are the folks with stacked arrays, two rigs, blah blah blah.Rest assured, they didn't get there overnight.

I run with a team of operators (and solo); we think we're at the top of the second group. We don't have huge arrays, but we've managed reasonable placings over the years. It takes patience, dedication, and an open mind to know where you need improvement. Some folks just won't like it, and that's okay.

It all depends on what you want to do with the hobby. SOme people LOVE talking on the 2m repeater with their no-code tech. Why is that any less enjoyable an activity?

73,

Sean

I would like to second what Steve said - all we do is communications, not decision making. Have a direct line, either phone, eyeball, or radio, to the event coordinators, and let them make the decisions. You as NCS should just run the net in the most beneficial way you can to make sure all goes well with supplies, problems, need-to-knows, location of personnel, etc.

I also agree that remaining silent and listening on a busy net is invaluable. One can get many questions answered just by knowing what's going on.

I like to encourage newer hams to participate in the events which I coordinate the communications for. Its ideal training for emergency services, and its fun too. No-coders who cant do much on NTS have a real role to play here, as we generally use VHF and UHF, and they are instrumental with their enthusiasm in filling the rosters.

Its also sometimes a good initiator for those new hams who are self-contious talking with other, experienced hams one on one, but are OK talking formally to a net control station. Similarly, I try to encourage those new hams who became hams so they could talk to their ham spouses, and all you ever hear them do is talk to their spouses and to no-one else. While that's perfectly OK in and of itself, Public Service is a good way to break out of that mould and get more fun from radio while really helping out.

> other accessories and stuff.

I dunno...maybe we could talk them into it!

>- Why did they stop making the HTX-100

We are at the bottom of the sunspot cycle. 10 meters is "mostly" useless
but for local work. I had a lot of fun with this unit a few years ago and
worked about 30 countries mobile. I'm hoping it will resurface in 5 years
or so!

>- Why don't they have at least one ham employed at every store so that
> they can help you with a radio you have purchased or even tell you what
> a ham radio is???

Another good idea! But it depends on how many hams are willing to work
for Radio Shack!?!

606. 219 to 220 Mhz Packet

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-08 00:00:00 UTC
From: rickmcm@delphi.com
Message-ID: <9504081916591.The_Win-D.rickmcm@delphi.com>
Source record: 248945

Has anyone been keeping up with the latest FCC rulemaking that gives 219 to 220 Mhz to amateur radio for 100 Khz bandwidth high speed packet link channels?

At first glance, this appeared to me to be a terrific windfall for amateur radio, and especially for the packet folks,

I do not currently operate packet, and have not been on packet for several years. One of the reasons that I got off of packet is because that here in Northern California, packet is going nowhere. We are still stuck with 1200 baud BBS's, 1200 baud backbones for the BBS's, and 1200 baud keyboard channels. We have lots of high level NET/ROM-THE/NET nodes on hill tops all talking to each other on channel at 1200 baud, and creating a real nightmare for the user trying to connect to one and send just one packet frame to the town that is 50 miles away, it is near impossible.

With the exception of improvements in packet BBS software, I have not seen any advancement in packet operations in Northern California for the last 10 years or more.

The FCC recently decided to give 219 to 220 Mhz to amateur packet. I was really hoping that the local packet folks would take this opportunity and start planning for some high speed backbone channels, or node linking channels. Unfortunately, I have not heard them even mention it.

Anyway, at first glance, I thought this was a real good deal for amateur radio. However, I just received a FAX of a copy of a FCC license for Pacific Gas and Electric, the local gas and electric monopoly through out Northern California. Their license shows that they are already licensed for 160 units in the 216 to 220 Mhz band. A closer look at their license shows that they are licensed for 40 units in the 219 Mhz band. They have a license for channels every 50 Khz from 219.050 to 219.500.

This may or may not present a problem for amateur packet. The way I read it, amateur radio will be fixed point to point operations, and the PG&E license is for mobile operation only. I gather from reading this, that PG&E will be secondary to amateur radio which will be secondary to government and marine locating services.

The PG&E license has an emission designator of 20K0F9W. Can someone decipher that for me? I believe that it is for mobile telemetering data, if I read FCC part 90 correctly.

The PG&E license shows that they are licensed for 160 mobile units. It also shows that they have a control point at 245 Market St. in San Francisco. Does this mean that the control point can turn those mobile units on and off?

I keep reading about high speed packet in other parts of the country. Is this really taking place. I thought I read about 56 Kbaud backbones and 9600 baud BBS's in Georgia recently. Is this true? Is there any high speed packet in your area. I keep asking the local packet folks why we don't have any high speed packet planned for
this area, but they seem to think it does not exist. What is happening in your area?

Just thought that some of you packet types might like to know about the new packet spectrum before you start planning your packet operations there.

607. Grand Opening! HAM Room at BayMOO!

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-08 00:00:00 UTC
From: arthurc@crl.com
Message-ID: <3m76eg$md@crl.crl.com>
Source record: 248946

BayMOO,an all-text virtual reality on the NET, has just completed an installation of a room that allows people to listen to AND send transmissions to packet radios all over the world. The room allows the non-ham visitor to see transmissions coming into BayMOO via server link, with hundreds of packet end nodes all over the world. Americans are in a minority; so if you speak French, German, Spanish or Portuguese, all the better!

Hams can be give a call-sign property by the room's owners. They can then transmit, and their transmissions are automatically prefaced with their callsigns. The MOO environment makes transmission and legibility a breeze. It's truly a breath-taking experience, and a big leap for Hams with an internet connection.

To get to BayMOO, telnet to this address:

baymoo.sfsu.edu 8888

If you just want to look around for the day, or for a couple of days, use your call-sign as your guest login name. If you want a permanent character, write to:

rk@world1.worldbit.com

and tell him you want your callsign as your BayMOO "handle."

When you log into BayMOO, just follow instructions. Type HELP MOVEMENT and HELP COMMUNICATION for the basics.

The type

@go Virtual Ham Central

which will transport you to the packet room. You will need to have either Akira or Dr.J give you a property that allows you to transmit, and that automatically prefaces your transmissions with your callsign.

The Grand Opening of Virtual Ham Central is Wednesday, April 26, at 7 p.m. PST. Be there for the grand opening of a new era in Ham radio!

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 08/2330Z APRIL 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 08 APRIL AND FORECAST FOR 09 APRIL - 11 APRIL

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 72/8

GOES satellite data for 07 Apr
Daily Proton Fluence >1 MeV: 5.6E+05
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 4.8E+06 (normal)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
09 Apr 10 Apr 11 Apr
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 09 Apr: 74/11

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled to minor storm levels.

Estimated Indices : A K Observed A Index 07 Apr
Learmonth 27 3345 5532
Fredericksburg 25 42
Planetary 45 78

Observed Kp for 07 Apr: 4676 6765
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
09 Apr 20 Unsettled to active
10 Apr 15 Unsettled
11 Apr 10 Quiet to unsettled
COMMENT: IPS Geomagnetic Warning 10 was issued on 5 April and is
current for interval 7-9 April.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
08 Apr fair poor-fair poor
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
09 Apr normal fair poor
10 Apr normal normal fair
11 Apr normal normal fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
08 Apr -31 40% depressed during the local day and 15-30%
depressed at night. Regular Spread F during
local night.

Predicted Monthly T index for April: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
09 Apr 0 10-20% depressed during local day and near predicted
monthly values at night.
10 Apr 15 Near predicted monthly values
11 Apr 30 10-20% above predicted monthly values
COMMENT: IPS HF Warning 14 was issued on 7 April and is
current for interval 8-9 April.

>I want to see a good functional schematic!

Since ring voltage is 90v 20Hz filtered-square-wave AC, you can't easily generate it with today's low-voltage logic. BUT I have a package of literature from Cambridge Electronic Laboratories, Somerville MA (617), which makes the "black magic" ringing generator: 5V DC in, 90 V ring out! It's a black square IC-like thing, about an inch square. Gandalf uses it in their ISDN adapter, the 5242i, so I know it works. CEL (Dr. Jeffrey Race, proprietor, he'll remind you) puts out a booklet, too, with circuits. They make a whole line of stuff like that. I'd give you the number but I just packed it up today in anticipation of a future qth move...

612. Newt Gringrich(sp) showing a vacuum tube during his speech

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-08 00:00:00 UTC
From: wa2ise@netcom.com
Message-ID: <wa2iseD6qF4v.9y6@netcom.com>
Source record: 248951

Saw Gringrich's speech Friday night and he mentioned that the federal government is the biggest buyer of vacuum tubes, for the FAA. He used what looked like an octal based tube, with a bulb-ish shape. Something like a 5U4 envelope, but the insides looked like a pentode. He described it as 1950's technology. Vs a "micro-chip", (an IC like a '386) "1990's technology". Noone calls 'em "microchips"!

Anyone care to speculate what tube Newt showed us?

Well all you amateurs,

Here is another CHEAP way to get on 2 meters.

The HTX-212
30 Memories.
CTCSS enc/dec.

This is all the info I got from page 43 in CQ Magazine April '95.

- Radio Shack also says that they are serious about amateur radio.
- Then why don't they carry magazines like QST, CQ, or 73 and
other accessories and stuff.
- Why did they stop making the HTX-100
- Why don't they have at least one ham employed at every store so that
they can help you with a radio you have purchased or even tell you what
a ham radio is???

73 all, DE VE7CBT.

This is the way it is up here in Canada.
Radio Shack poeple up here seem to know about Ham Radio, like Future Shop
sales people know about anything.

> Arthur, N1NHZ, Boston Amateur Radio Club, 73

Sure.

I served as Net Control for a couple of MS Super Cities Walks, as well as Michigan's MS-150 two-day bike tour.

The number one rule for any tactical station is: STAND BY AND LISTEN. Far too many people feel they have to be talking in order to contribute. As net control, I urged stations to avoid unnecessary transmissions. I complemented those that did, and told them that they were contributing simply by being there and listening and waiting to be called by Net Control.

I feel the most important "activity" in this hobby in general should be listening.

I kept my nets quite formal. No transmissions to be made without the poermission of Net Control. The result was efficient nets that got the job done.

On another issue, ham volunteers must remember that their function is merely that of communications facilitator. You are not a cop, nor a paramedic (unless you really do that professionally). I have a friend who just loves going out with the local "goblin patrol" on Devil's Night and play stakeout detective. All he's supposed to do is drive around and report anything suspicious, but he has gotten involved in some stupid and dangerous chases.

>friend is looking to buy one and the FTP files I found were of no
>help on this subject. Comments welcome.
>
>Thanks,
>David

With the FT-530, when it is put into cross-band mode the radio
automatically goes to low power on both sides and also enables
CTCSS enc/dec automatically. All of this can be over-ridden.
Once this feature is enabled you just press 'FM' 3 to change power
setting then band then same thing over on the other side. Then if
you want to turn off TSQ you press the key sequence 'FM' 1 for both
side.

I would recommend the TH-79A over the FT-530.
MUCH MUCH MUCH MUCH MUCH MUCH MUCH MUCH easier to use!!!!!

However I would recommend the FT-530 over the FT-51R.

Where do you get your second or third hand info from?? It's nice to have an opinion, but make sure its accurate. The HTX212(which I bought) is made by none other than "Motorola" and it's specs and performance is no worse than any of the Japanese models. Actually it has a better 12db SINAD sensitivity than alot of units out there like Alinco and Standard. I am using it on packet to run a BBS system and occasionally use it for voice. And I've had no problems. Nothing wores than having rumor mongers spread inaccurate info.

I totally agree that the Doug Hall voter is the way to go. We are running three receivers and getting ready to add a 4th using Doug Hall voter. You can save some money by getting the completed board without any case or connectors and doing that part yourself.

The important thing is to get the audio out of the discriminator before any audio filtering so that all of the high frequency noise is included in the linked signal. We had to add PL tones on the links to get rid of some intermod problems also. If you do that you need to logically "AND" the COR and tone decode so that it takes both to indicate an active channel input. The only disadvantage of using tone encode is that there is a slight delay for the tone decoder to indicate a valid tone and have that channel(input) get voted.

You really have to work at getting all of the audio levels balanced between the different inputs. But when you get it right it really works well and is amazing. We have display lights to show which inputs have an active signal and which is being voted. I have been at the repeater and watched it switch back and forth between the inputs as a mobile would be driving along. Even in an area that you would think would be solid to one receiver, there will be nulls that will switch to the other receiver. It can switch many times a second. Very, very fast.

Previously we were using a voter that voted an input based on the signal strength at the beginning of each transmission. It did this by inserting delay inversely proportional to signal strenght. The new continuous voter is 1000 times better and well worth the money.

If you get one and want to compare notes or discuss problems I would be glad to exchange e-mail about using that voter.

626. The Phone/autopatch

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-09 00:00:00 UTC
From: dmgillah@mtu.EDU
Message-ID: <199504091807.OAA03469@rock.me.mtu.edu>
Source record: 248832

Ok, here's the deal with the phone.....

It would seem that we cannot get another phone line. Woo-jay said we could get a internal 14.4 modem, that has voice mail & a switch for voice calls for under $200, so that solves the data/voice problem. We've decided NOT to enable the reverse-autopatch, at least for now, otherwise we would HAVE to have a dedicated line for the patch. Don't worry, it can still be enabled for emergencies by the Chief OP and the President. As far as normal autopatch operation goes, as long as the line is not in use, no problem, someone using the 440 machine *'s up, uses the patch, #'s down. Problem is when the line IS in use when someone tries to use the autopatch. It's just like picking up a phone extension, then whatever is on the line voice, data, etc, gets transmitted over the 440 machine, more than likely interrupting the original user, especially if it was data. The trick is to make a circuit to somehow detect wheather the line is in use, and if it is tell the repeater controller not to pick up the phone, essentially disabling the autopatch untill the line is clear. I got some numbers from George, W8FWG on phone line voltages. He said 50 VDC across the wires (Red = +50, Green = 0) when the phone is not being used and that it drops to 5-7 VDC when someone (or something) picks up the phone. When the wires are shorted (< 1500 ohms) the phone company generates a tone at 60 ipm (interuptions per minute) i.e. the standard busy signal. Is there any one out there that could come up with such a circuit? A transistor comes to mind for the actual voltage detection, but how to interface it with the controller, I am clueless. Any help would be appreciated....

628. TAPR Information and Internet Access

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-09 00:00:00 UTC
From: gjones@tcet.unt.edu
Message-ID: <3m9bna$gs3@hermes.unt.edu>
Source record: 248834

Periodic Announcement - TAPR Information and Internet Access

Greetings from TAPR!

TAPR can be reached via the Internet. The Automated Information Server that TAPR provides allows anyone to request information on TAPR, products, newsletters, and lots of other files. To find out more about this service, send an e-mail message to listserv@tapr.org with the subject line "Request" and the following text in the body of the message:

help (for a brief set of instructions)
index -all (for a list of all file by topic area)
list (for a list of TAPR Mail Groups)
get tapr taprinfo.txt (or info on TAPR)

In the above message example, "help" retrieves a brief set of instructions for info, "index -all" retrieves a list of available files by topic and "taprinfo.txt" retrieves a text file containing information on TAPR and what TAPR is all about. If you want to retrieve several text files with one message, use a separate line for each "get filename" request.

General Information:

* Ever heard of a TNC ?

* Interested in general packet radio information?

* Interested in high-speed packet operations?

* Interested in other types of digital communications?

* Interested in experimenting or building kits?

* Interested in keeping up-to-date on national digital and packet issues?

Then you might be interested in TAPR!

Goals:

% Support Research and Development efforts in the area of amateur digital communications

% Disseminate information on packet and digital communications

% Provide affordable and useful kits for experimenters and hobbyists

% Pursue and help advance the amateur art of communications through publications, meetings, and standards

History:

If you have used a packet radio TNC, then you are already a part of TAPR history.

The TNC (Terminal Node Controller) project grew from a discussion in October of 1981 at a meeting of the Tucson Chapter of the IEEE Computer Society. A week later, six of the attendees gathered and discussed the feasibility of developing a Terminal Node Controller that would be complete and available to amateurs at a modest cost. This was the genesis of TAPR.

On June 26th 1982, Lyle Johnson, WA7GXD, and Den Connors, KD2S, initiated a packet contact with the first TAPR unit. The project progressed from these first prototype units to the TNC-1 and then finally to the TNC-2 which is now the basis for most amateur packet operations worldwide.

TAPR was founded in 1982 as a national organization with interests in the areas of packet and digital communications. Today, TAPR continues as a membership supported non-profit amateur research and development organization. TAPR currently has more than 2000 members, worldwide. TAPR continues to develop kits for the amateur community and is working actively on publications and communications standards.

Membership:

Membership in TAPR includes a subscription to the quarterly published Packet Status Register newsletter. PSR has been published since 1982 and is recognized as an authoritative source for up-to-date user and technical information on packet radio. Much of the material in PSR is timeless. Back issues may be obtained from the TAPR office. Membership in TAPR is $15 for one year. In Canada and Mexico membership is $18 and outside North America they are $25.

Join the amateur digital-revolution -- Join TAPR!

Special Interest Groups

TAPR maintains several SIGs in various areas. To get the latest list of SIG groups, send an e-mail message to listserv@tapr.org with the subject line "Request" and the following text in the body of the message:

list (for list of mail groups on TAPR.ORG)

To request the information on any mail group, send an e-mail message to listserv@tapr.org and in the message text include:

information listname (where listname is the name of the mail group)

When you are ready to subscribe, send e-mail to listserv@tapr.org with the following command in the message text:

subscribe <list> <your name>

List should be the name of the mail list you want to join and Your Name
should be both your First and Last Name.

Current SIGs include:
NETSIG Regional Networking SIG
BBSSIG BBS SIG
HFSIG SIG on HF Digital Topics
DSP-93 SIG for those that are building TAPR/AMSAT DSP-93 kits
APRSSIG SIG on APRS

FTP users

The TAPR Software Library is now available via anonymous FTP. You can
access the library by ftp access to 'ftp.tapr.org' in the directory
/tapr. Login in as 'anonymous', with a password of
'your_account@internet_address'.

Packet Raido and TAPR is on the World-Wide-Web!

The series is accesible through the Packet Radio Home Page at this
URL:
http://www.tapr.org/tapr

What's here? A page of links (the Home Page), the TAPR Home Page, a page of
Packet Pioneers and Contacts, a hypertext packet primer and FAQ, and more.

Thanks to Howie, N2WX, for his support and invaluable contributions of
the TAPR page.

: is clear. I got some numbers from George, W8FWG on phone line voltages.

WHat we do on our repeater is ordered two ringmaster #'s one for the
modem and one for the "reverse patch/touchtone control". HELLO DIRECT
makes a box that detects the ringmaster pulses (u can detect up to 3
ringmaster numbers with it besides the normal ring). If someoen tries to
dial the patch with someone dialed in on the modem the HELLO DIRECT box
gives u a "local" busy signal. It is possible if u were dialing in on
touchtone and someone dialed the patch then you'd get connected but wud
get dead air. Our controller (link comm) I think knows when u've dialed
in, but they have a s/w bug; I always use the modem.

THe box cost <$100. WOrks real fine. Oh, one other benefit. By using this
setup, if someone had CALLER ID all they wud see is the main #, not the
ringmaster numbers. Of course someone could try and dial that number and
it wud just ring. What I do is have the autopatch force a *67 out first
to turn off the caller id stuff.

Leon

632. simple powerline driven 1.5V supply for LCD watch modules

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-09 00:00:00 UTC
From: wa2ise@netcom.com
Message-ID: <wa2iseD6s9wD.2v4@netcom.com>
Source record: 248838
Cross-posted to: rec.radio.amateur.misc,sci.electronics

This is a power supply for running those little digital LCD watch clocks
(the sort that usually run of a small 1.5V button battery). Runs
directly off the powerline, but it isn't a shock hazard.
Because the 470K resistors will limit the current to a value too
low to cause a significant shock (you probably wouldn't even feel it).
Note that both sides of the powerline have 470K resistors, so it won't
matter which way this gets plugged in.
You'll need 3 1N4148's (or similar signal diode) to maintain 1.5V
across the clock, 3 because the diode drop at this low a current
is lower than the usual 0.7V.

```
<- 1.5V ->
+-- clock ----+
pos | 1uf |
|-----| |-----|
| |
powerline 120V ----^v^v^v----->|--+-->|-->|-->|-+ 1N4148's are a
470K 1N4004 1N4148's | shunt voltage
| regulator
pwrline return----^v^v^v------------------------+
470K
```

For 250V operation, make the 470K resistors 1meg.
470K should work off of 100V in Japan.
Powerline frequency doesn't matter, the clock times itself off its own
internal crystal reference.
Power consumption about 15mW (0.015 W).

So what does that say about today's Extras? Prior to the `fill-in-the-blank' code test everyone had to provide one minute of error-free copy. Are you saying those who pass today's code test wouldn't have been able to become Extras a few years back?

Well...it's somewhat clear that this proposal is a shot at silenceing K1MAN. Problem is that it silences a LOT of good stuff too (like W1AW and others).

A better way to silence K1MAN is simply to ignore him. If NO ONE talks to him or even about him, he will eventually get frustrated and go away. Can we possibly do this?

I thought the following comment sent to the FCC by KK6GP
was especially insightful.

Mr. Maia's rationale is that he is distressed at the
"anger" such transmissions cause. He further states
that this anger then manifests itself with deliberate
jamming. Although the jammers are not identified by
call or otherwise, he offers no proof against the logical
conclusion that at least some of the miscreants are those
new amateurs he allegedly seeks to "protect." It seems
counter to the structure of this country's rules and
statutes, and reduces to sophistry the rulemaking process,
to try to eliminate an illegal activity by outlawing a legal
one that is perceived as an irritation to the criminals.
Such a line of reasoning could easily lead to the elimination
by statute of all-night convenience stores on the premise
that they provide irresistible temptation to stickup artists.

David,
Here are a few ideas for working those last few states for WAS; County Hunter's nets at 14.336 MHz and 7.238 MHz during daylight hours; also, CW County Hunter's net at 14.0565 MHz. The 3905 Century Club runs nets in the evenings at 7.2335 MHz at 0000z and 3.9035 MHz at 0200z during daylight savings. I can run up to WV in less than an hour (weekends would be prefered) for a CW or SSB contact from my car on any band 80-10 mtrs. Delaware in 2 hours.

73,
Mark Behrens, WB9OOG

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 09/2330Z APRIL 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 09 APRIL AND FORECAST FOR 10 APRIL - 12 APRIL

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 73/9

GOES satellite data for 08 Apr
Daily Proton Fluence >1 MeV: 2.3E+06
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 2.0E+09 (very high)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
10 Apr 11 Apr 12 Apr
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 10 Apr: 70/5

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to unsettled

Estimated Indices : A K Observed A Index 08 Apr
Learmonth 13 3233 4322
Fredericksburg 20 27
Planetary 25 34

Observed Kp for 08 Apr: 3556 4533
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
10 Apr 15 Quiet to unsettled
11 Apr 10 Quiet to unsettled
12 Apr 10 Quiet to unsettled

3A. GLOBAL HF PROPAGATION SUMMARY

SB DX @ ALLBBS $OPDX.202
Ohio/Penn DX Bulletin No. 202

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 202
BID: $OPDX.202
April 10, 1995
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, K4CEF & Southeastern Cluster Group, AB4JI, KJ4VH, KF7AY, N4VZ, W8CNL, 5R8DS, DF4RD, DL8AAM, HP2CWB, JH2PDS/1, OE2DYL, OH2IC, SV1LK, YU1AA and DL7VEE & DXNL for the following DX information.

5A, LIBYA. A European cluster reports 5A0SI on 10100.4 kHz at 1157Z. QSL via DJ6SI. WFWL!!

5H, TANZANIA. Eric, OH2BBF, arrives to Ngara around April 14th for a 2 month T.O.D. for UNHCR. He has a TS-50 with him and he hopes to receive a licence. Also, Eric may make possible side trips to 5X, 9Q, 9U and 9X. QSL via his home call when he returns.

5R, MADAGASCAR. Ben, 5R8DS, informs OPDX that he has improved his antenna for 80 meters. He is using an Inverted L which is 30 meters long and 15 meters high with a ground system consisting of 24 radials underground (11 meters in length). He is active every morning just before his sunrise from 0230-0305z on 3606 kHz (TX). Ben states signals are still very weak but he has an URGENT REQUEST that people DO NOT CALL him on his frequency UNLESS YOU REALLY HEAR HIM! QSL to Ben Witvliet, Box 404, Antananarivo - 101, Madagascar.

9K, KUWAIT (THE CONFUSION CONTINUES!). Ray, W8CNL, reported to OPDX that the following 9K callsigns have been changed back to what they were originally: 9K2/N6BFM is again 9K2ZZ, 9K/KI0K is again 9K2ZC, 9K2/N0YKI is again 9K2YY and also it is believed that 9K2HA has received his callsign back. Recently, the government of Kuwait had recalled the callsigns of 9K2ZZ, 9K2ZC, 9K2YY and all Americans operating in Kuwait, and issued those calls to Kuwaiti citizens. They have now changed their minds again. Meanwhile, Ray and Derek, KC4ELO, state that they will accept all cards for 9K2ZZ, 9K2ZC, 9K2YY and will try to sort them out later.

BS7H, HUANG YAN DAO (aka Scarborough Reef, IOTA AS-116). The Chinese Radio Sports Association, CRSA, and the South China DX Team, SCSDX, have announced plans for a second DXpedition. A multi-national team, led by BZ1HAM, will set sail for Huang Yan Dao on Tuesday, April 11, and is expected to commence operations under the call BS7H no later than April 13. The operation will be land-based, with the goals of keeping two stations on the air continuously for at least three days, and to provide at least one QSO with as many DXers as possible, rather than make multiple band-mode QSOs with a smaller number of DXers. The operator list includes BZ1HAM, BZ1OK, KC6KOU, KJ4VH OH0XX and OH2BH. Two amplifier equipped stations using vertical antennas will be on: CW - 3505, 7005, 14025 and 21025 kHz and SSB - 3785, 7045, 14195, 21295 kHz. QSL via JA1BK.

FO, FRENCH POLYNESIA. Lou, LX1SP, will stay on Tahiti from April 11-21th. He will be operating SSB from two different islands (both OC-046). Look for him on 14340 and 21400 kHz from 1800-2000z.

HP, IGUANA ISLAND, PANAMA. Jose/HP2CWB, Emilio/HP2DFU and Ricardo/HP2CTM will activate this new IOTA island located in the coast of the District of Pedasi in the Province of Los Santos (HP9). The island is unhabited and it is one of the most important wildlife refuges of Panama. The planned DXpedition will take place April 30th and May 1st. Depending on the island's conditions, they will try to stay overnight and operate continuously on 10-80 meters including the WARC bands. They will be using a special callsign HP9I. The QSL info is via HP2CWB (Jose NG, P.O. Box 728, Colon, Rep. of Panama) or via the HP Bureau.

PA, TEXEL ISLAND (IOTA EU-038). Thierry will be active from this Dutch island in the North Sea Coast (North) Group as PA/ON4TH/p. His activity will take place sometime between April 18-23rd using verticals for 80 and 40 meters, and dipoles for 20-10 meters operating CW/SSB.

QSL INFO AND UPDATES..... Warren, KF7AY, reports after a long delay in getting the 9G5TL cards back from the printer, all request have now been answered. All QSL request for 9G5TL should be sent to KG7XC, Jack Sheldon Jr., P.O. Box 31898, Mesa AZ 85275. Requests should not be sent to the 9G QSL Bureau in Accra. With all of the cards now answered, turn around should be less than a week. QSL request for 9G5JR/WA7LNW, 9G5MB/AA7NO, 9G5MT/WY7K, 9G5RM/NZ7E, 9G5VT/K5VT AND 9G5WH/KF7AY should be sent to their CBA..... VP8GSP cards are now being received..... A fax from Francesco, IK0FVO, will be at the Dayton HamVention April 28 to 30th. He will be bring the 1A0KM's and HV4NAC's logs and QSLs to confirm contacts for those who are still waiting for their cards..... ..... Dieter, OE2DYL, reports he will be the new QSL Manager for PY0TUP beginning April 29th. To receive a card, send to OE2DYL, Dieter Konrad, Rosengasse 1, A-5020 Salzburg, Austria; along with the following: USA - 2 green stamps + 2 IRCs + SAE -- Europe - 1 green stamps + 2 IRCs + SAE (NO MORE - NO LESS). Cards will be sent out mid-June to July. Requests sent with not enough postage, will be QSLed via bureau.....

S0, WESTERN SAHARA. N4VZ talked with Tim, KC0PA, on April 6th and he was using the callsign 4U/KC0PA, instead of S0/KC0PA. Tim stated the reason

was that the DXCC Desk advised him that they would have great difficulty in approving his operation using the S0 call. But if he obtained permission from the UN commander to operate and used the 4U prefix, his operation would probably be approved. Tim has obtained the appropriate approval from the UN commander and is, therefore, hopeful that his current operation will receive the blessings of the DXCC. He also advises his QSL manager is VE9RHS. Meanwhile, there seems to be a sudden burst of activity from S0RASD on several bands, notably on 75 and 17 meters.

T31, CENTRAL KIRIBATI. Bill, T31JK is active from Kanton Island and he should be there for at less another week. He states that he has no RTTY equipment and prefers SSB to CW. His activity will be on 40-10 meters. He was heard on 20 meters SSB around 0830z. QSL T31JK to GW0OJK, which is Bill's home call.

V8, BRUNEI. V85GA sometimes operates on 20 meter SSB from the club station, V85BG. It has been reported that the club station has installed a new 160 meter antenna and V85GA will be looking for stateside stations on that band (No times or frequencies were given).

YA, AFGHANISTAN. A report from SV1LK indicates that Oleg, YA/UT9XL, continues to be active from the Ukrainian Embassy in Kabul, Afghanistan. He will be active for 2-3 months and has been heard on 14120 kHz around 1445z. QSL to his home QTH: P.O. Box 207 Pavlograd, 323012 Ukraine.

1995 YUDX CONTEST. Yugoslav Amateur-radio Asociation (SRJ), Narodna Tehnika Belgrade and Yugoslav DX Club (YUDXC) have the honor of inviting amateurs all over the world to take a part in the 1995 YU DX Contest. The contest will be held from 1200z April 22nd to 1200z April 23rd. The bands and modes: All bands 1.8 to 28 MHz (except WARC bands), CW and SSB. Avoid using the DX porton of the bands, and cross band/mode contacts are not permitted. The same station may be working on CW and SSB on the same band. Categories: Single/Op CW; Single/Op SSB; Single/Op Mixed (CW/SSB) and Multi/Op Mixed Single TX. Exchange: RS(T) plus number of your ITU zone. Certificates and trophies are available.

OPDX MAILING LIST. Just a reminder! The OPDX Bulletin can be received via InterNet E-Mail (not Packet mail). Send an InterNet message to:
opdx-request@nshore.org
and on the "Subject:" line put the word "subscribe". No text is needed in the body of the message but if you want to write something, it is all right (I read them all!).

FAX YOUR DX INFORMATION NOW! Faxing is available Monday/Wednesday/Friday from 0430 to 2330z only. The number is 216-237-8208 and the FAX card is sharing the same phone line as BARF-80 BBS using a data/fax/phone switch.

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with

the Sysop or send InterNet Mail to: aq474@cleveland.freenet.edu or send BitNet Mail to: aq474%cleveland.freenet@cunyvm or send PRODIGY Mail to: DFJH48A or send a message via packet to KB8NW @ WA8BXN.OH.USA.NA

>
Don - I think the key phrase here is "our" problem. It may be a problem
to you and your fellow Georgia hams, but it is not a problem to most of
the rest of the world. However getting W1AW shut down, as this petition
would do, IS a problem.

At the April 6 meeting of the Mid-MO Amateur Radio Club (Jefferson City
MO), which is a general interest club representing all types of ham
operation in our area, I asked the following questions. The answers may
interest you!

Total hams in attendance (all active on the air) = 39
Number who have used W1AW code practice or bulletins = 20
Number who have ever heard of K1MAN = 4
Number who have ever been QRM'd by K1MAN = 0

Fred's solution would certainly solve YOUR problem, but at great cost to
the rest of the ham community. His idea stinks and I will be filing
comments in opposition to it.

Ever since I first read the "146.52" string, here, a few weeks ago, I've been monitoring and "CQing" that frequency every day, to and from work (30+ minutes each way), and so far the results are zip, nada, nothing. I'm in Los Angeles. I think it's a great idea. One of our repeaters here, 147.210+ PL 156.7 and 146.820- PL 100, is run as a voluntary "Emergency and CHP (Highway Patrol)" frequency, monitored by whomever wants to, whenever he or she can. I understand they handle 1000+ calls a year! But it's limited to emergency reports, with a 30-sec timer. It sure would be nice to have some bandspace for on-the-road conferencing, where one might pick up some highway conditions, directions, detors, etc...especially here, where our life blood is the highway!

>could be sent to me? Any information that could help him out would be
>appreciated.

Tom,

I'm a member of the Waterway Net. We cover the East coast from Nova Scotia to the Caribbean. We meet daily at 0745 ET on 7268 kHz. Your friend is invited to join us on the eastern leg of his trip. He may want to formally join and get a roster for reference purposes, but that's not necessary. If he chooses to do so, he should write to our Sec/Treas Phil N4DFJ at:

The Waterway Radio and Cruising Club
P.O. Box 5339
Lighthouse Point, FL 33074

and include the following:

1. Callsign(s) and Radio Handle(s) or Nick Name(s)
2. Full First Name(s) and Surname
3. Mailing Address
4. Phone Number (if he wants it printed)
5. Boat Name and type (Make & Model or length)
6. $9.00 contribution

We issue a quarterly newsletter in addition to all the net services. The net format is:
0745 Net begins--Emergency/Priority Traffic
074x Weather: Bahamas, SW N. Atlantic, Caribbean, Gulf of Mexico
0800 Traffic to and from Boats underway
0805 General traffic
0815 Float plans and position reports
083x Resume traffic
0900 Close net

Times are subject to change do to traffic loads, but we try to start the float plan/position
reports right at 0815.

We've been around for about 20 years, 7 days a week. Welcome aboard.

Bob Lade, W9UCR
NCS Mondays

SS>
SS>Have you also considered automated beacons? This would include DX
SS>beacons, foxhunt beacons, etc.
SS>

The petition as written does not affect beacons.

But perhaps someday someone will figure out how to sell beacons
commercially, and will petition to outlaw them in the amateur
bands.

Hi Ted: The prefix block RAA to RZZ is (was) assigned to the Union Of Soviet Socialist Republics. Since the USSR doesn't exist anymore (and with many republics trying to seek their own identity, and thus their own prefix) you might not see that block listed. Just a guess.

The following was written around 1950. Note their no-code license
existed 45 years ago.

Jeff NH6IL
****

AMATEUR RADIO IN AUSTRALIA

Operating an Amateur Radio Transmitting Station is a popular hobby throughout the world and there are very few countries where authorities do not permit the activity. It is necessary, in most countries, to pass a written examination in Radio theory and practice, as well as Government Regulations and sending and receiving morse code, to obtain a licence to erect and operate an amateur station.

In Australia, there are about 4,500 persons who have passed the exams set by the PMG's Dept. and have been alloted call signs for identification of their stations.

There are two classes of licence in Australia, viz. the Amateur Operator's Certificate of Proficiency (AOCP) and the Limited AOCP for those who do not pass the morse code exam. The latter permits the licencee to operate on higher frequency wave bands above 50 megacycles, ie wavelengths less than 6 metres which normally are not propagated beyond Australia.

Licences are issued to persons over 16 years of age who pass the examinations, and stations are inspected regularly by an officer of the PMG's Dept. to ensure that technical standards are maintained and personal safety is not prejudiced.

The Wireless Institute of Australia conducts classes in theory and morse code for persons wishing to qualify for the Amateur Licence. For the average person educated to leaving standard about 9 months of study is necessary with weekly classes in each subject. A fee of 10 pounds is charged for the full course. The PMG's Dept. holds examinations at 3 monthly intervals in all capital cities and in the country, the local postmaster may supervise the exam and give a morse code test.

Membership of the Wireless Institute of Australia costs 2 pounds per year for full members and 35/- for associate members (unlicenced). This includes subscription to the monthly magazine "Amateur Radio", printed in Melbourne and the local "Journal" which is issued about 6 times per year.

Monthly meetings are held at the Master Builders Hall (1st Floor) on South Terrace, Adelaide (not far from West Terrace) on the fourth Tuesday of the month at 7.45pm, when technical lectures or jumble sales of radio equipment

(2 per year) are held. Most members obtain very useful equipment at bargain prices at these evenings.

The Institute gives a radio news bulletin lasting about half an hour every Sunday morning over Station VK5WI, which is broadcast and relayed on short wave at 9.00 a.m. on the 160 metre, 80 metre, 40 metre and 6 metre bands so that all may hear it.

There is a Short Wave Listeners section of the Institute and members are allotted Short Wave Listeners QSL cards for use when submitting reports to Amateur Radio operators overseas.

Amateur transmitters may be quite inexpensive when home constructed. An outlay of 20 pounds to 50 pounds can provide a modest but very effective station. Most elaborate equipment may be purchased by those with the means, and equipment purchased from USA or England may cost from 200 pounds to 1,000 pounds for the best.

Amateur radio is an excellent hobby for all ages and both sexes, from 16 - 18 years of age. Once the station is established it may be operated for as little as half an hour per week to give the owner a great deal of enjoyment and relaxation. Talking to people overseas teaches young people a lot about geography and the ways others live. Making a Transmitter or Receiver is excellent training in electronic techniques, and the use of morse code is a means of overcoming a language barrier if the appropriate Q code signals are used.

Invalids and retired people who cannot partake of more energetic activities find amateur radio a most rewarding pastime. Indeed, this latter group of enthusiasts forms the largest and most active portion of the Institute's national membership.

Are you interested? Then write to:

The Wireless Institute of Australia
Box 1234 K
GPO,
Adelaide

for the secretary to send you details.

Amateurs are a friendly crowd and we should be glad to have you as a visitor at one of our meetings.

Better yet, find the source and file a criminal complaint in the home district of the individual/s who initiate such nonsense. That "vehicle oil" incident should leave little doubt but that they were the rantings of what very well may be an insane individual, one the local law enforcment agency should be made aware of. Think about it.

1: I've had an AEA PK-88 for some years which has worked well, though is very hot to the touch.

2: I recently bought an MFJ-1270C and find that it has NO FLOW CONTROL on the computer interface unless you are connected. Since I wanted to use it to monitor the DXCluster, unconnected, in software I'm developing -- and only turn on the flow control when I can accept data, the 1270C is useless. Talking to MFJ (at least they'll talk to you by 800-number), they said that they took out the flow control years ago since they "needed the space and nobody used flow control when not connected". Sigh ....

3: My Beta-tester says that his MFJ-1278 DOES have flow control even when not connected.

Just facts, no endorsements given.

being
>a Sybase user, I don't know if I can access the data with FoxPro).

The readme.txt file in pub/XFS_AlphaTest/amateur describes the fields
of each file. The fields are delimited by vertical bars (|). I haven't
downloaded the 32 Mbyte file yet, but have played with the daily files.
There are several files, and to build a complete record for an entry
you need to key the records from the various files by the callsign field.
For example, the crm.dat file (club calls) will give you the callsign,
club name and trustee callsign, while the appl.dat file will have a
record with a matching club callsign that gives the trustee's name and
address information, along with the license issue and expiration dates.

Well, Earl, the FCC is doing some fantasic things these days. Im a VE and see the FCC doing some real FAST turn around on new licenses these days with the computer forwarding and the new computer for amateur radio license issuing at the FCC, they turn the new ones around in 3 - 4 days! New applicants can actually call up at 5 days after their test and in most cases be told of their call sign and now can go on the air with that information! Kinda revolutionary, huh! For the last year and a half they have been issuing the wallet sized and the framing size on the same print-out. Makes it handy to carry your original around with you. Sign both of them and have the wallet size laminated. Makes it nice for the wallet and to produce your orginal ticket at exams, etc.

I believe the cloning is done with the Motorola Service software, not via a cable radio to radio. From what I remember, there is a clone feature within the software. Once you read the code plug from one radio, you access the clone feature, connect the radio, and push the button.

So, your argument seems to imply that vaccuum tubes are still the
cheapest and most effective way to implement a radar system (especially
the 99% of the system that *isn't* operating at high power), and Eastern
European, Russian and Chinese vaccuum tubes to boot! Since Newt also
mentioned fiber optics for high speed data communications it will be
interesting to see who now, in a spasm of anti-Newtism, feels obligated
to defend manual Morse technology.

>blank' code test everyone had to provide one minute of error-free copy.
>Are you saying those who pass today's code test wouldn't have been able
>to become Extras a few years back?

Given that the comprehensive test has been in use by the FCC since
1978, "a few years" is actually more like 17 years.

Anyway, when I'm operating CW I normally only take notes, rather
than writing everything down. So, when I took 1(C), I took notes
and answered the questions. I got 100% on 1(C). Does that make
me less of an operator than someone who didn't worry about the
actual message content and simply wrote characters down blindly
for one minute?

I think not. What is with all this "*Real* Extras do it this way"
bigotry, anyway? I guess I'm self confident enough that I don't
have to erect hoops that I can jump through and others can't.
I could start off "*real* Extras can crunch S-parameters",
"*real* extras can design PLL synthesizers", "*real* extras can
write Unix kernel code", "*real* extras can walk on water".
Who cares? *Real* Extras have Extra class amateur licenses.

HH>
HH>Yes, you are to much a cynic. Fred was aiming at K1MAN.
HH>

That may be a worthy target, but using a nuclear weapon to squash an ant is a bit much. The unfortunate result, if Fred's petition is granted, is that the blast and fallout will deprive amateurs worldwide of some valuable services of long standing. Are you willing to pay that price to solve a single fight on 3975?

I am no fan of K1MAN, but I suspect the only way to shut him up would be to close down HF. Would you support that petition?

Heck yes, many of us are frustrated by the fact that FCC hasn't solved this by applying the rules already in place, but let's not cut off our nose to spite our face here. (Would K1MAN simply find some clever way to work around another rule anyhow?)

hi mike --

yes the gentleman who was doing that had a good idea and he published 6 or 7
issues and then stopped .. he was forwarding them to me for distribution ..

i am not sure if he was not getting enought material to publish or it was
too big a chore ..

nice concept though ..

The following is a QST

An important filing on an upcoming world radio conference, the
ARRL takes on the FCC of failure to enforce the ham radio rules,
a follow-up on the loss of two new ham radio satellites and
another unlicensed broadcasters bites the dust. These stories and
more on Newsline report number 921 coming your way right now!

(*****
ARRL COMMENTS ON WARC

The ARRL has commented to the FCC on four topics of interest to
amateurs in preparation for the International Telecommunication
Union's World Radio Conference scheduled for later this year.
The League says that it had already regularly opposed even the
suggestion of the use of present amateur bands between 2300 and
2400 MHz for the mobile satellite service and that it was apparent
that any additional spectrum requirements for mobile satellite
service operations could be satisfied in bands outside those
allocated to the Amateur service.
On the matter of the 40 meter band, the League says that,
although an important goal of both the ARRL and the International
Amateur Radio Union, the IARU, is the eventual creation of a
worldwide allocation of 300 kHz, it believes the matter should not

be on a WRC agenda until the year 2001 or later. The League said that considering this any sooner would likely defeat the purpose of the exercise.
At the 1992 World Administrative Radio Conference the United States proposed realignment of the bands around 7 MHz, specifically to provide amateurs a worldwide allocation of 6900 to 7200 kHz. While this realignment did not take place, a recommendation from that conference called for a future conference to take up the matter.)
On the idea of an international amateur radio permit, the League cited ongoing work by the IARU and in particular the European community, and then suggested an agenda item for the 1999 WRC to read: "Resolved to consider the adoption of an international amateur radio permit to allow international roaming by duly licensed amateurs among signatory countries."
Finally, the ARRL took issue with a claim that requirements for new single sideband HF broadcasting stations should be tempered by a lack of available High Frequency SSB receivers. The League said that the issue is not whether SSB should be required for HF broadcast, but rather when double-sideband emissions should be terminated.
Pointing out that amateurs and most other radio services converted to SSB many years ago, the ARRL said there should be no further foot dragging in the SSB conversion of the HF broadcasting service.

(*****
ARRL CHARGES FCC REGULATORY ENFORCEMENT IS DISMAL

The ARRL has gone on the offensive attacking the FCC's lack of enforcement policy in ham radio. The national society characterizes as dismal the agency's recent track record in Amateur Service rules discipline and it is demanding an immediate policy change.
The Leagues assault on FCC inaction comes in comments filed on a commission proposal to adopt a standardized schedule of monetary forfeitures for rules violations in all services. The League says that while there have been only a few cases in the Amateur Service where prompt enforcement action was badly needed the necessary action did not take place. This, despite repeated FCC promises. The League notes that in these cases of amateur rules violations in recent years, FCC promises of action have gone unkept and the problems persist visibly. The ARRL suggested that forfeiture amounts for amateur rules violations be adhered to instead of greatly reduced, and that collection efforts be carried through.
As to the new schedule of fines, here the ARRL says that the Commission has probably arrived at a reasonable forfeiture schedule but that administration of the schedule is the more pressing matter. The League said that at issue is whether the fines were sufficient to cause recipients to not violate a

particular rule in the future, and deter others from violating the same rule.
The ARRL adds that the forfeiture proceeding in C I Docket 95-6 should be far broader, to include a review of the overall effectiveness of monetary forfeitures as an enforcement tool. This, given that as presently used such forfeitures are often either ignored or contested.

(*****
LI BUST

Speaking about enforcement, it was Suffolk County New York detectives rather than the FCC who say that they are moving a bootleg broadcaster from the world of rock and roll to a rock pile. Bear Fax, the newsletter of the American Broadcasting Company Broadcast Employees Amateur Radio Society reports that Joseph Caracciolo of Lindenhurst was arrested in early February following a six week probe. Investigators allege that Caracciolo, 24, had been operating a pirate FM station on 87.9 MHz from a former residence in the town of Holbrook.
According to authorities, Caracciolo used thousands of dollars worth of professional broadcast gear allegedly stolen from a number of Long Island radio stations to keep his unlicensed WEFX on the air. This included a single bay commercial circularly polarized antenna.
In aircheck tapes played for the media, a man identified by the police as being Caraccolo is heard daring authorities to find him and take him off the air. They did. The investigation is continuing and police say that they expect to make more arrests.

(*****
FCC MONITORING CUTBACK

Meanwhile, it may soon get a lot harder to track down unlicensed broadcasters and other regulatory violators. This with word that the FCC is cutting back on its HF monitoring operations as it gets ready for future automation. Monitoring stations in Baltimore Maryland, Boston Massachusetts, Buffalo New York, Grand Island Nebraska, Miami Florida are among the first to go. For the moment, their functions are being transferred elsewhere. But more closings are expected as the FCC converts all monitoring to remote control from a headquarters location in Laurel, Maryland.

(*****
RM-8286

This is a Newsline special report. A petition to the FCC by a ham radio newsletter editor aimed at banning all one way information bulletins regardless of mode of transmission, along with code practice and shuttle audio retransmission has been assigned a rule making number by the Commission. The FCC has assigned the file number RM 8626 to the request.

Its sponsor is Fred Maia operates the W5YI VEC and is the editor publisher of the W5YI Report Newsletter. He contends that code practice, bulletins and other one-way transmissions are not conducive to modern ham radio communications. He calls the FCC rule that permits one-way transmissions on the amateur bands as every permissive category and taken in its broadest context. He says that this permits just about anything to be transmitted that is even remotely associated with the Amateur Service.
Again, Maia's anti high frequency bulletin petition has been assigned the file number RM 8286. It carries a very short commentary cutoff date of May the 4th. Its one of the most controversial issues ever to be brought before the FCC and some expect as many comments to be filed on this issue as were filed on the creation of a no code license half a decade ago.

(*****
SATELLITE LOSS FOLLOW-UP

Here is a follow up to last weeks report on the loss of two new ham radio satellites. It now appears as if the two ham radio birds were lost when their launch vehicle exploded.
The Israeli-built Gurwin-1 TECHSAT and the Mexican UNAMSAT were part of the payload of a Russian SS-25 rocket originally built to carry ballistic missiles and recently converted to launch satellites. The Reuters News Agency said the rocket, which was launched from Russia's Plesetsk Cosmodrome, came down in the Russian far east, in the Sea of Okhotsk, on March 28th. Two Russian satellites also were lost in the failed launch.
In November 1993 the first test launch of a converted SS-25 was successful, but with a lighter payload. Radio amateurs, particularly in Europe, have hoped that the Russian rockets will provide an inexpensive way to launch amateur radio satellites.

(*****
GEORGE WILSON HOME

ARRL President George S. Wilson W4OYI is home. At least he is near his home in a transitional care facility in his hometown of Owensboro, Kentucky.
Early on Friday March 31st, President Wilson was released from a Fairfax, Virginia hospital where he spent the last month an a half in the initial recovery from a stroke he suffered on February 11th. He was transported to Washington Dulles International Airport for the flight back to Owensboro accompanied by his wife Marian.
Late word is that President Wilson fared very well during the move. He will remain in the Owensboro facility for a short time and then transferred to a nearby rehabilitation center to begin a regimen of physical therapy.
Get well wishes can be sent directly to President Wilson at 1649 Griffith Avenue, Owensboro, Kentucky 42301. And of the off

chance that he might be hearing this weeks newscast, a hearty welcome home from all your friends here at Newsline!

(*****
COORDINATION MEETING SURVEY

Who will attend the ARRL sponsored repeater coordinators meeting later this year? This is a question that nobody including the League seems willing to speculate on. Probably because it is really impossible to hazard any kind of a guess.
At this time, the league has not announced what city will play host to this gathering. If we are to hazard a guess, there are four places that immediately come to mind. These are the cities of Chicago, Dallas, Denver and St. Louis. All are located in the interior of the country and all four are major airline hubs. Since some coordinators may have to travel 1500 miles or more, holding the meeting in a city that is easy to reach is crucial to its success.
Also important is the availability of meeting rooms and relatively inexpensive hotels within a short distance of the airport, and a weekend that is not playing host to a ham radio convention in the same venue. The very last thing anyone wants is that kind of a distraction. This probably means late spring or early fall as the time frame.
But lets put the guesswork aside. Its time to simply ask repeater coordinators a simple yes or no question. This is, regardless of where the meeting is to be held, will you be there? To answer, jot down your name, your call sign, the name of the coordination group you represent and either the word yes or no on a post card. Send your response to Coordination Meeting Survey in care of Newsline, 28197 Robin Avenue, Saugus, California 91350. We will tally the results over the next two weeks and give you the results.
By the way, this survey was nor requested by the ARRL, nor is it sanctioned by them, but the results will be presented to the leagues' meeting planners as a public service from Newsline.

(*****
REPEATER DIRECTORY

And speaking about FM and repeaters, news that the 1995-96 edition of The ARRL Repeater Directory will soon be available and it is a real winner. This because the new volume will contain nearly 20,000 listings. That's right, we said 20,000 listings including repeaters in Australia and European countries. Beacon listings have increased by nearly 200 in this edition along with complete listings of frequency coordinators, ARRL committees and special service clubs. Look for it to be released at the Dayton Hamvention late this month.

(*****
DX

In DX, word that the annual dxpedition to Aranmore island will take place from June 2nd to the 5th. Anyone interested in taking part should contact EI6GS or EI4DW at their Callbook address. Also, 9J2BO is active daily from Zambia on 160 meter CW. Listen for Brian on 1825 kHz around 04:00 UTC. He can also be heard on 10 and 15 meters CW about 25 kHz from the band edge between 1330 and 15:45 UTC. QSL as directed on the air.

(*****
A CASE OF HONOR REVISITED

Some weeks ago, Newsline reported the incident where Tony, EI5EM received a letter from Italy requesting, and offering, a QSL for a non-existent QSO. As it turned out, this item was picked up by the DXCC awards manager at ARRL Headquarters. In a letter to EI5EM. the Leagues QSL manager asked that Tony pass on all relevant details to him for investigative purposes.
EI5EM says that the letter from the ARRL went on to say that the League takes a serious view of such breaches of honor and maintains files on such individuals.
Tony's original letter to the Irish Radio Transmitting Society News was also re-printed in Radio Revista, Italy's biggest selling hobby radio magazine. Following its publication the Italian operator in question has written a full letter of apology.

(*****

And for this week, that's all from the Amateur Radio Newsline. You can write to us at Post Office Box 660937 in Arcadia, California 91066.

684. Re: Linked Repeaters & Driving Vacation

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-10 00:00:00 UTC
From: paulc@fc.hp.com
Message-ID: <3mcgkj$9pq@tadpole.fc.hp.com>
Source record: 248794

Colorado Connection Repeaters:

Mountain ranges make the coverage of the repeaters hard to describe, but here's a stab. The limits of the coverages described are based on a 50 watt power output to a decent car top antenna. In the mid ranges, an HT generally works well.

145.400 - Akron, 4,157 ft.

Covers parts of NE Colorado.

145.310 - near Boulder on Mt. Thorodin, 10,385 ft.

Using I-25 as a north-south reference, it covers from about Cheyenne, Wyo to about halfway between Denver and Colorado Springs. It goes east about 100 miles and west along I-70 to the Eisenhower Tunnel, approx. 60 miles from Denver. The main repeater in the system.

145.130 - Colorado Springs, approx. 6,200 ft.

This is a relatively low elevation repeater which mostly only serves the local C. Springs area.

146.790 - Breckenridge area, approx. 12,500 ft.

Covers from the Eisenhower Tunnel west to Vail Pass, with some dropouts. Covers the Dillon area very well.

147.075 - Kremmling, approx. 9,200 ft.

Covers from Dillon/Breckenridge area to north of Kremmling, and US40 from around Winter Park north to near Rabbit Ears Pass. Gets desensed a fair amount from nearby packet repeater. Spotty along I-70 west of Beaver Creek/Avon.

145.445 - Mosquito Pass, near Leadville, approx. 13,000+ feet.

Covers I-70 spottily from around Copper Mtn west through Vail to Eagle and the entrance to Glenwood Canyon. Covers South Park (Fairplay, etc.) well. Gets down to Ca&#65533;on city. Covers from Copper Mtn. south thru Leadville to around Buena Vista on US 24.

147.285 - Salida, approx. 11,700 ft. (Methodist Mountain)

Covers from about Buena Vista on the north (US24) over Poncha Pass down into the San Luis Valley and down past Alamosa to near the New Mexico border.

146.985 - Rifle, approx. 8,729 ft.

Covers from Glenwood Springs west into parts of Grand Junction. Once I-70 climbs back up into Utah, it can be accessed very spottily around Crescent Junction north of Moab. It's also been worked from Canyonlands N.P. near Moab at an elevation of about 6000 feet (about 170 miles away). It also covers parts of NW Colorado and NE Utah.

147.285 - Grand Junction, approx. 5200 ft.

Mostly a local area machine that also covers south towards Montrose (I believe). I've heard a report of it being heard as far west as Green River, Utah.

Have fun!
-Paul C. KG0CZ

685. Re: The Phone/autopatch

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-10 00:00:00 UTC
From: swick@huey.x.org
Message-ID: <3mbs6k$o3v@public.x.org>
Source record: 248795

The trick is to make a circuit to somehow
detect wheather the line is in use, and if it is tell the repeater controller
not to pick up the phone, essentially disabling the autopatch untill the line
is clear.

There is a simple device made to plug between a phone line and an answering
machine to disconnect the answering machine if another extension picks up.
I've used a couple for various purposes (like disabling an extension that
shares a line with the computer modem :-) at my local consumer electronics
parts store (i.e. Radio Shack). Under $25 if I recall correctly.

687. Wanted: broken Kenwood PB-32 batter pack

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-10 00:00:00 UTC
From: richardl@adobe.com
Message-ID: <1995Apr10.192149.1722@adobe.com>
Source record: 248797

Does anyone have a non-functioning Kenwood PB-32 battery pack that
they would be willing to donate to an experimenter? I want to pull it
apart. If it seems to be in the same condition or better (unlikely)
when I put it back together you are welcome to have it back.

email replies - richardl@adobe.com

thanks

Well, I guess I stand informed. I had not thought of Russia. What I have is a MAC application that lists out all the callsigns either by call or country. It would seem to be a little old. Thanks for the info.

>Does anyone know if the W5YI group is "non-profit"? If not, they should
>be banned from filing petitions and commenting on petitions since they
>have a monetary interest in ham radio.
>
>(so does the League, for that matter, but at least they had the good
>sense to make themselves "non-profit".)
>
>The proposal certainly has some merit, however, as one-way broadcasting is
>becoming a problem on the HF bands.

Being nonprofit is unrelated to comments to the FCC. Most departments of the FCC and most comentors are for profit. I think the point to be made is that amateur radio is a nonprofit service and the proposal promotes w5yi's monetary interest, not the interest of amaeur radio.

By the way I think a sensible proposal that fits the situation is to ban VOICE bulletins below 30 MHz. No one much relies on W1AW voice bulletins and would not be as great a loss as the CW practice.

Excise the evil without killing the patient.

Subject: Re: 2M MOBILE FROM RADIO SHACK

>>All I keep hearing from folks on the net is how many times they had to
>>return their defective Radio Shack handhelds.

This misinformation serves no useful purpose at all. Either your
anti-Tandy bias is clouding your posts, or you're reading some 1987-era
threads on a small batch of HTX-202s that had problems. Which is
certainly not the case in current history.

As far as the HTX-212 Mobile Transceiver is concerned, it's not a
poorly-designed unit at all.

-True FM xmit for superior audio and excellent packet performance.
-30 memory channels.
-Priority channel selection.
-One call channel.
-Store up to six 15-number DTMF sequences for paging or auto-patch.
-Microphone, external speaker and antenna jacks.
-On-microphone DTMF keypad.
-Multifunction scanning.
-Dual VFOs for semi-duplex operation.
-Frequency step selectable.
-Built-in subaudible tone encoder AND decoder.
-Output power 45 watts (high), 10 watts (low).
-$349.99 suggested retail. Substantially less from authorized stores.
-Frequency range (Factory)
Transmit.....144.600-148.000 MHz
Receive.....136.000-174.000 MHz
-Directions includes for MARS/CAP modification.

Compact in size, solid performer. So it doesn't have 500 channels, nor
an infra-red remote microphone. Sorry.

SB SPCL ARL ARLX016
ARLX016 WRTC rescheduled for 1996

WRTC rescheduled for 1996

The second World Radiosport Team Championship has been rescheduled. WRTC-95, planned for July 1995, has been rescheduled for July 1996.

Organizers of the Washington, DC event said that WRTC-96 will be held the second weekend of July 1996, in conjunction with the IARU HF World Championship.

The WRTC committee said that the major reason for the postponement was to give financial sponsors more time to publicize their participation well in advance of the event.

The committee also has decided to change from 50 two-person teams to 30. The time frame for qualifying contest scores for applicants will be expanded from five to six years, to include results published from 1990 to 1995.

Questions and comments may be directed to WRTC Publicity Chairman Bill Hider, N3RR, or to WRTC Co-chairman Eric Scace, K3NA.

A preliminary story about WRTC-95 was in October 1994 QST, on page 84.

From ARRL Headquarters
Newington CT April 10, 1995
To all radio amateurs

SB SPCL ARL ARLX017
ARLX017 US grant to Ukraine

U.S. grant to Ukraine

Ukrainian Amateur Radio operators will benefit from a 24,987 dollar grant from the US Agency for International Development.

The grant, from USAID through the Eurasia Foundation, was obtained by a proposal made by the Foundation for Amateur International Radio Service, a nonprofit public foundation founded in May 1991. FAIRS has charter groups in Ukraine, Guyana, Bangladesh, and Russia.

The grant will fund electronics hardware to extend APLINK coverage to Kiev from the Western Ukraine, with nodes also going to Hungary, the Czech Republic, and Poland. An Internet gateway also is planned, as well as an additional APLINK station and an FM repeater in western Ukraine.

Delivery of the equipment is expected by early summer, and will include hardware for seven digipeater nodes, including terminal node controllers, radios, and antennas. About 35 Ukrainian amateurs have packet capability in the current APLINK system.

The FAIRS grant proposal was written by Executive Director David Larsen, KK4WW, and European Director Victor Goncharsky, US5WE.

A previous FAIRS project, training of prospective amateurs in Bangladesh, was described in September 1993 QST, on page 86.

Yes and no. That the US ATC system is so good is in spite of the technology used, not because of it. If your 386sx/25 used 2000 watts and required constant maintenance, you might be inclined to upgrade. I'm a pilot, too, and I've sat in an ATC center and marvelled at the 1960s gear. Probably the worst problem is that the government doesn't know how to deal with technology, and it waits 30 years before deciding to make a major upgrade.

Well, let's not also paint such a broad picture of all teenagers, either.
For some, $15 is a lot of money. For others, a drop in the weekly
allowance.

Regardless, $15 for a year's membership in the ARRL is a good deal for a
young ham!

>So, your argument seems to imply that vaccuum tubes are still the
>cheapest and most effective way to implement a radar system (especially
>the 99% of the system that *isn't* operating at high power)...

As I recall, most if not all aircraft transponders use a TWT (Transverse
Wave TUBE) to generate the multi-kilowatt pulse at 1090 Mhz. That would
account for most of the tubes in the air traffic system, but maybe not most
of the tubes in FAA owned equipment. What cost effective replacements
for high power tubes are available? All radar equipment operates at
relatively high power, I believe.

Was that the same tube that Sec. Transportation Pena displayed in a
similar speech a couple of years ago? That one looked like a 6L6GT/G.
It looked to me as if they tried to find the largest recognizable tube
so that it could be seen on tiny TV screens (another tube as noted above).

Like it or not, tubes will be with us well into the next century.
What do TV stations use? 4CX250's for drivers, among other applications.
And what is a low power radar anyway?

>or how to use it from here by E-mail.

http is part of what is called a universal resource locator. It is the
way that the address for a document is given on the world wide web.
The world wide web is a group of linked servers that use a mark up
language called html to create hypertext linked documents. If you
don't understand hypertext then read about it at you local computer
store or library.
For example
http://this.loc.com.html
defines the location of a document on the world wide web.

The QSL server is a location on the world wide web. I don't think that
you can access it via email. Even if you could, you should get with
the modern world and get yourself web access. You will need a true
internet link with tia/slip/ppp etc. Good luck.

I'm a VE2 and a member of a volunteer firemen squad.Till now, we used to monitor the Quebec prov. police (SQ) during our operations. But now they've digitaly encode their voice messages. Does anyone can help us in descrambling that ?

A plan of some homebrew digital voice decoder would be fine.

Thank's

Jack

Sorry for the triple post buy I couldn't find the
post I am responding to. There had been some discussion
about where the HTX-212 was produced. Some wag posted
very authoritatively it was made by Motorola. Well folks
I dragged myself into the Shack and read the back of the
unit. "Custom manufactured in Korea for Radio Shack."
That pretty much settles where is is made. But by who? My
money is on Uniden. Now it may have a Motorola component
or two but I don't think Motorola made it.

I'm not familiar with your Trooper. I guess it is a 4WD type where the body of the vehicle is RF insulated from the main chassis by rubber cushion blocks. I have seen this as a major RF problem in many a setup. To stop or minmise the ign noise plus others you need heavy braided straps the length of the chassis to electrically tie the two together. You may have already beentold this.

You might want to keep in mind that the maritime channels can be used by
any recreational boater who's got a license and enough water to float the
hull. If you want, you can use those channels while floating a 10 foot
rowboat in your backyard pool, to communicate with other boaters as
necessary. Be sure you have the license, though - Coast Guard District 9
(Great Lakes) impounds radio units during routine inspections if the boater
does not also have proof of license.

If you have knowledge of suspected illegal activity, it should be reported
to the nearest FCC field office. THe USCG might also be interested if the
activity involves a navigable waterway such as a river or the Great Salt
Lake, or if it interferes with distress calls or their search and rescue
activities.

I'm building a new, two-story house and am looking for tips on how one puts an effective grounding system into a shack located on the second floor.

I seem to recall that one has to limit the length of the ground (from the equipment to earth), otherwise it becomes a radiator of your signal. How do folks get around this? There must be some common, effective way of grounding a second-story shack.

Help! Tips and suggestions are appreciated!

I keep seeing postings about 10m being dead. Anyone who says that
without trying the band is missing some good contacts. My QTH is in
the SE USA and I have worked New Zealand, Australia, and most of
South America and the Caribbean in the passed couple of months.
Sure it requires patience and skill to be on at the right times,
but it is possible to work DX even now.
I have an Advanced Class Ticket and could be on 20m where it is
definitely easier to work DX but I prefer the challenge of 10m.

: technology". Noone calls 'em "microchips"!

: Anyone care to speculate what tube Newt showed us?

No, I haven't an idea which tube it is. What Newt forgot to mention
is that the FAA has high power radar units, which require tubes to get
the high power transmissions. Let's see a microchip do that(arrayed MMICs
don't count yet:-).

The idea is you frame the big one and laminate the small one. Then you hang
the framed one around your neck while you are out using your HT and the
laminated one stays home so you don't lose it. Or something like that. :-)

Someone wrote:

|> >I would tend to agree. W1AW bulletins were never much help to me. This
|> >group for information and software for practice really may make it
|> >obsolete.

In my opinion, based upon Fred Maia's past dealings with screwing amateurs (case in point the "$5 renewal fee") no doubt he has a pecuniary interest in filing this proposal. No W1AW bulletins means Freddy gets to sell more code practice tapes.

Does anyone know if the W5YI group is "non-profit"? If not, they should be banned from filing petitions and commenting on petitions since they have a monetary interest in ham radio.

(so does the League, for that matter, but at least they had the good sense to make themselves "non-profit".)

The proposal certainly has some merit, however, as one-way broadcasting is becoming a problem on the HF bands.

What I thought was interesting was that, even with all these "obsolete"
vacuum tubes, Air Traffic Control still works very well. As a pilot, I know
that everything is fine. What Gingrich is saying is akin to saying that I
should upgrade my 386sx/25, even though it works perfectly well for what I
need to do (get on usenet and type papers). I have no need for a 100MHz
Pentium, because it wouldn't help me do anything better. New technology is
great, but if the old stuff still works fine, why replace it?

743. Update: Ignition noise, S10 Blazer

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-10 00:00:00 UTC
From: scurrie@VNET.IBM.COM
Message-ID: <199504101750.MAA02366@mail.cs.utexas.edu>
Source record: 248877

Thanks to all those who sent me suggestions on my noise problem.
I need to try a couple more items, but to answer the questions many
of you asked:

Although this is a new HF install, it is by no means the first radio
installation in this vehicle. Already installed are 3 VHF/UHF FM
radios and a scanner, none of these radios experience any noise.

The HF radio is connected to the same power buss as the other radios
which is a 15 foot run of #8 direct to the battery terminals.

The antenna is a Hustler mast mounted to the rear bumper (I literally
drilled a hole through the bumper!) with an additional bond strip
connected to the body about 3 inches away. The antenna is fed with
RG8X run to the radio which is mounted to the rear of the arm rest
compartment.

Running the HF radio off a different power source (large battery in
the back seat) does not reduce the noise.

Removing the antenna from the mount (it has a bayonet adapter) does no
reduce the noise. Disconnecting the antenna at the radio makes the
noise go away completely.

As an additional experiment, I ran the engine at about 1500 RPM and
pulled the secondary lead out of the coil (while properly insulating
my body!!). The noise is still apparent as the engine winds down. I
then restarted the engine, ran it up to 1500 RPM and this time pulled
the primary leads from the coil and the noise stopped immediately.
I have therefore concluded that this is indeed high voltage ignition
noise and not the fuel injectors, fuel pump or some other electrical
system.

I did look up the QST article and was amused that they mention that GM
has a customer service department for each of its divisions, and then
they didn't include addresses or phone numbers for any of them in the
article!!

My letter is in the mail to the GMARC for the installation guidelines.

Several folks mentioned bonding the tailpipe to ground, so I think I
will try that next if I can figure out how one grounds a tailpipe.....
:-)

Thanks again for all the suggestions. If and when I figure this out,
will post the solution.

Regards,

Hello to all,

I tried several times to subscribe to the internet DX reflector.
Of course I sent my subscription request to dx-request@unbc.edu
but nothing happens!! The funny thing is that I do seem to be able
to post messages to the DX reflector (because people send me mail
regarding the message I put on the reflector) but I don't seem
to get on the mailing list myself! So I'm beginning to wonder if
the DX reflector is having problems itself. I sent a message
to Lyndon VE7TCP about it but I cannot reach him ('host unknown').

I subscribed to cq-contest@ and VHF@ without any problems.
What could be the problem? Can anyone help?

I'm in the luck postion of being asked to do research for a friend.

He'd like ANY info you might have on the following :

* Mods for a Ranger RCI 2950
* Linear or Bi-Linear 11m amps
* Supliers for sales & tech info.
* Plans for 11m beam ant. (To build quad or 3 element)
* Plans for ant tuner/matcher
* 11m club/books/mags/meets info (BC, Canada preferred)

Anybody able to offer some insight on any of these?

Thanks,

Simon.

Hello Satoru:

SATORU HAYASAKA (s_hayas@vega.concordia.ca) wrote:
: Hello.
: I would like to do ham radio in Canada. But I do not know how.
: I've been trying to find out any info. Now here is the questions:

: 1.Where, when and how can I take the exams?

Many clubs in Canada have designated examiner status. This means that they can schedule exams at times more convenient for you. However, you may write the exams at the Industry Canada office, located at Room 620, Stock Exchange Tower, 800 Square Victoria, Montreal. Their phone number is 283-5682. They will help you to find a club to give you an exam.

: 2.Do I have to begin from beginner's level?
: (like no HF or CW only or whatever)

We have one certificate called the Amateur Operator's Certificate, issued with up to four qualifications - Basic, 5 wpm, 12 wpm and Advanced. You may write any qualification examination in any order that you wish, but you must hold the Basic qualification in order to qualify for a licence. Each qualification extends certain priviledges. For example, for VHF operation only, you just need the Basic. However, if you wish to operate on HF, build your own transmitter, use up to 1 kW, then you will need the Basic, 12 wpm and Advanced qualifications. When you contact the district office, ask for RICs 1, 3, 24 and 25. Those are all the Radiocommunication Information Circulars on amateur radio operation in Canada.

: 3.Are there any study manuals available?

Yes there are study guides. I suggest that you contact Radio Progressive at 336-2423 and they will be able to help you out.

: BTW, I'd been doing ham radio for 10 years in Japan and I have a
: Japanese licence. So I know about ham radio (at least basic).
:
: Thank you for your help.

754. Re: Update: Ignition noise, S10 Blazer

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-11 00:00:00 UTC
From: HWDX09A@prodigy.com
Message-ID: <3meujh$t18@usenetp1.news.prodigy.com>
Source record: 248639

I have also been the route of tracking down noise in a new Chevrolet
and have come up with a few areas to look into.

1) A service bulltein was just issued for a control module change in
the Caprice line sold as fleets to Police Departments for
replacement
of a control module in the cruise control system. This noise was
said to have been effecting VHF communications especially Low Band
VHF so there could well be some noise into HF.

2) Severl people have suggested to me the possibilty of the electronic
fuel pump creating noise and that rear mounted antennas on the
trunk
or coax lines running along the drive shaft hump may pick this up.

The problem described here and the elimination of the noise when
the
coax is removed would make me look at a torroidal filter at the fuel

pump in this case.

3) Taking witrh GM they also mention a problem with the automatic
transmission speed control sensor effecting VHF television
reception
in touring Vans. Apparently this is a PCM device which can be a
part of my problem.

I have in recent weeks used an aircraft band scanner to locate my noise
coming from the drivers side lower dashboard and radiating along the
rear defogger window grid so that my trunk lip antennas had to be moved
to a null spot on the sides of the trunk. Detaching the rear defogger
does reduce this "hash" but the solution isn't to disable the defogger.

For the most part the dealer has been an absolute ZERO in helping as
he claims they aren't involved as this is an add-on radio.

I am hoping for some help in conversation with the General Motors and
DELCO reps at Dayton to come closer to an answer.

755. Pricing on Low End HF Gear

Bzzzzt. It might work ok for you flying your Cessna 172 at 6000 feet, but it probably doesn't work all that good for the airlines. From what I hear they can't fully utilize the optimized flight paths (vertical and horizontal) available from their onboard computers because of ATC constraints. Besides, though you might think everything is fine, the controllers just might be wishing for some modern technology to make their job easier, just like I'm grateful for the Sun computer I'm using right now.

It's real easy to be satisfied with the status quo; after all, you really don't know what you're missing until you've used a new technology, then you wonder why you were satisfied before. Unless you're a code beeper, of course, then you wonder why voice and digital transmission was invented anyway.

>Wave TUBE) to generate the multi-kilowatt pulse at 1090 Mhz. That would

"TWT" stands for "Traveling Wave Tube."

As a side note, there are AM broadcast transmitters operating at the
5 KW output level which are all solid-state; I would imagine that it
is probably possible to have Class A commercial FM stations (3 KW ERP)
which also have all solid-state transmitters, since the transmitter
output power required would be on the order of 1500-1800 watts, depending
on the number of bays in the antenna (i.e., the gain).

ARLX018 New to CQ Halls of Fame

New to CQ Halls of Fame

CQ Magazine has announced its 1995 inductees into its Contest and DX Halls of Fame.

The sole new member of the CQ DX Hall of Fame is Carl Henson, WB4ZNH. New members of the CQ Contest Hall of Fame will include Ken Wolff, K1EA; Dick Norton, N6AA; Jim Neiger, N6TJ; and Tine Brajnik, S52AA.

Carl Henson, 52, of Fairburn, Georgia, conducted a number of DXpeditions to rare countries in the 1980s, mostly in Africa. His wife Martha, WN4FVU, accompanied him on most of these operations. He was nominated by the Southeastern DX Club, based in Atlanta.

Ken Wolff is 46 and wrote the ''CT'' contest operating software. He continues to update and distribute it to amateurs around the world. He lives in Harvard, Massachusetts and was nominated by the Yankee Clipper Contest Club.

Dick Norton, N6AA, is 53 and lives in Topanga, California. He was recognized for his long-time contest activity from 9Y4VT, as well as his participation on the CQ Contest Committee. He was nominated by the Southern California Contest Club.

Jim Neiger, N6TJ, is well known for his contest operations for many years from Ascension Island, as ZD8Z. He's 56 and lives in Orange, California. He was nominated by the Northern California Contest Club.

Tine Brajnik, 46, lives in Slovenia and is well-known for his contest operations earlier as YU3EY and YT3AA. He also is an organizer of the S50A contest station. He was nominated by the

Slovenia Contest Club.

The induction ceremonies are conducted each year at the Dayton Hamvention.

SB QST ARL ARLB036
ARLB036 Study sees more ham bands

Study sees more ham bands

A US government study concludes that amateurs could use 2180 additional kilohertz of spectrum in the future. The National Telecommunications and Information Administration (NTIA) reports this need in a just-released 10-year projection of spectrum requirements for all licensed radio services.

In June 1992 the ARRL responded to an NTIA notice of inquiry with extensive comments (see January 1993 QST, page 82). Here are the 2,180 kilohertz cited in the NTIA report:

30 to 50 MHz, 5 slots of 50 kHz each (250 kHz total);
160 to 190 kHz (30 kHz);
Near 5 MHz (50 kHz);
Expansion of 10 MHz band (200 kHz);
Expansion of 14 MHz band (50 kHz);
Expansion of 18 MHz band (150 kHz);
Expansion of 24 MHz band (150 kHz);
219 to 220 MHz (1000 kHz, already in process);
Satellite downlink, 29.7 to 30.0 MHz (300 kHz).

Here are excerpts from the NTIA study:

''The amateur community commenters have suggested significant changes to the allocation table to accommodate expanded amateur operations. Many of the suggested allocation revisions are reasonable....

''The amateur-satellite service will soon have a new generation of amateur satellites in orbit that will use all frequency bands allocated to the amateur-satellite service from 29 MHz through 24 GHz. For this reason, the retention of current allocations, additional amateur-satellite allocations, and the upgrading of

certain current allocations is desirable.

''Amateur requests for international reallocations would be appropriate issues for ... future World Radiocommunication Conferences (WRCs). Additional allocations at 160-190 kHz, and near 5 MHz will require technical studies to determine the availability of these bands to support amateur use.

''The expansion and upgrading of amateur allocations in the 10, 14, 18, and 24 MHz bands are acceptable, but will depend on future decrease of requirements for the aeronautical mobile or the fixed services internationally. The alignment of the amateur 3.5 and 7 MHz bands worldwide will require the inclusion of these issues in U.S. preparations for future WRCs.

''As noted, FCC rulemaking is in progress for amateur access to the 219-220 MHz band. The request for additional narrow spectrum allocations between 30 and 50 MHz for propagation experimentation (e.g., five, 50 kHz slots) will need to be studied for technical compatibility.''

Finally, the study said that ''any sharing of military radiolocation spectrum (e.g., 430-440 MHz) with the amateur services on a co-primary basis in current Federal radiolocation bands is not feasible because of the potential loss of operational flexibility for military radar systems. Further, the expansion of use in the 902-928 MHz band by federal and non-federal users, including the operation of wind profiling radars, may make this band untenable for amateur operations in the future.''

New club licenses surface

The FCC's Gettysburg license processing facility has begun issuing
new Amateur Radio club station licenses. The first ones appear to
have been issued on April 4.

These licenses come with systematically issued Group D call signs.
Obtaining such a license and call sign is a necessary first step
toward later obtaining a vanity call sign for a club.

For more information, see QST for April 1995, page 41, and for May
1995, page 95.

Steve Hideg, N8HSC responded [in part, with my notes interspersed]
>Sure.
>I served as Net Control for a couple of MS Super Cities Walks, as well as
>Michigan's MS-150 two-day bike tour.
>The number one rule for any tactical station is: STAND BY AND LISTEN.
Yes yes yes yes yes. There is a number two rule that only a few hams have
trouble with, but some do and they need to be reminded and encouraged:
When you have important information, pass it along.

>On another issue, ham volunteers must remember that their function is merely
>that of communications facilitator. You are not a cop, nor a paramedic
[tale of over-enthusiastic halloween (I assume) night patroler deleted]
All quite true, and inportant. A couple of "on the other hand"
observations.

First, by the very nature of a lot of public service assignments, one
tends to be where things are happening. It seems only prudent to be
prepared and equipped to deal with small first aid needs and other
forseeable needs relevant to the nature of the event. Among other reasons
this is because possession of a radio and any official or semi-official
looking clothing or insignia tands to make people assume that you're the
one who can solve problems.

The second I don't yet have fully formed in my mind, but it comes in part
from the presentation last week to one of our local RACES teams by a
representative from the state (California) OES. He was quite emphatic in
his view that we are NOT just radio operators, moving messages from point
A to point B. Rather, he sees us functioning as emergency managers.
There's a fine line here, somewhere between being little more than
biomechanical extensions of our rigs on the on hand, and taking over the
operation on the other. Different clients will be comfortable having us
at various places along that line. Different groups of hams, and
different individuals, will be comfortable as various places along that
line. We will enjoy our work, and the client's needs will be met, when
there is a pretty good match. If there isn't a match, there will be
probems no matter how competently we do what we do.

I don't think I have anything coming up in April (well, there's two things on the 29th but the not only conflict with eachother but with my plan to take the Advanced test that day, and with two non-ham things.) May starts off big, with a county EMS drill on the 5th, a one-day S&R drll on the 6th, a one-day bike event on the 13th, and a SF to LA bike ride the 14th to 21st. Then I think I'll rest.

There is a mailing list called ham-uwave. Have not seem any traffic on it in quite a while though. Send your request to "ham-uwave-request@ucsd.edu". You should include "add your-internet-address ham-uwave" in the message.

Ive worked several stations that had the Butternut Butterfly and
all were very happy with the antenna and its performance. The
nice thing about the Butterfly is that it can be rotated by using
a Radio Shack TV Antenna Rotor where as the large beams need a
very expensive power rotor. The other nice thing with the Butterfly
is the size. It can be worked on/installed easily.

On the three page yellow slip that you should have gotten for a claim check when you dropped your unit off for repair, is the phone number of the Repair Center that particular store uses. Call them! They will tell you when they received the unit, and when it will be returned to the store. The Centers have a pick up and delivery service that ferries items between the store and the Repair Center. This generaly is not a daily thing, but should occur two or three times a week, on a set schedule. Secondly, you can call 1-800-THE-SHAC(K) and follow the voice prompts for customer service. You will eventual get the name and phone number of the District Sales Manager covering your area. If they told you 10 days or less, then either they have much faster service than I do [Yes I am a store manager.] or the person you delt with mis-spoke. We generaly get our items back in about two weeks. Sometimes less, sometimes more. It depends on the complexity of the problem and if the Center needs to order parts for the unit. If I can be of any service please E-mail me n8xoh@aol.com(n8xoh).

BR>From: brian.carling@acenet.com (Brian Carling)
BR>Date: Thu, 06 Apr 1995 08:52:00 -0500

BR>These are great general suggestions, but again, they do not really
BR>make it easy to build-up. You are asking me to become a circuit design
BR>engineer which is beyond my training and the time and resources
BR>available. I was hoping for a practical circuit that would let me
BR>not only RING the local phone, but also allow two phones to talk to each
BR>other without any help from Ma Bell.

Brian -
I invented a little circuit that would do what you desire. It
requires the use of a DC power supply in around the 40 - 60 volt range.
Do you have access to such a power supply? If so, I will snail-mail you
the circuit if you provide me your address on your e-mail reply to this.
:)

My circuit uses a DPDT relay to switch the 40-60 volts DC back
and forth to the phone, simulating the ringing voltage that Ma Bell
uses. It works quite well in fooling so-called "electronic" telephones,
but might be a little weak for an old "mechanical ringer" telephone.

Let me know what kind of DC power supply you might be able to
get ahold of. I will calculate the resistor values that you will need,
and send you the circuit, and notes on construction.

Also, please let me know if you have a Radio Shack store near
you. If so, I can give you their part numbers for everything.

- Mike.

Hello All

I have been doing a fair amount of travelling to the USA recently.
During my travels I have successfully applied for my reciprocal license.
At the bottom of the license there is a paragraph that refers to various
FCC documents, ie

'....(3) Subparts A through E of Part 97 (Amateur Radio Service) of the
Rules and Regulations of the Federal Communications Commission....'

and

'....(4) the terms and conditions of the license issued to the alien by
his government, but not to exceed an FCC issued Amateur Extra Class
operator license...'

Could anybody tell me the correct number for the above documents and
where I can obtain them from ? (if different to the FCC). Perhaps these
are held in digital form somewhere?

>
The tubes that are still in use are mostly high powered transmiting tubes.
Real high power transters and FETs are just now becoming available. Tubes
usualy have a slow decline in preformance and solid state usualy fails in
a sudden release of smoke. Tubes are much more forgiving to momentart over
loads and mismatches. Tube can also be rebuilt for a fraction of their
cost.

When changeing out radio and tv facilites it is a simple cost benifit
calculation. And you want to phase it the transition so that problems
can be found and corrected. Vacuum tubes will be with us well into the
next century. There may be applications that are never replaced by
solid state deviced. A cascade photo multiplier tube is one that comes
to mind. Anoter is megavolt swtiching tubes.

There are also many places that intergrated curcits have rendered tubes
to the same place as the horse and buggy.

The HTX-202 is made by Maxon; this is pretty common
knowledge now, and I was actually told this by an ex-Maxon
person. I'd be a little surprised if the HTX-212 wasn't
also made by Maxon; they do have a line of land mobile stuff
already.

Of course, a Motorola GM300 with a ham radio front panel would
really rule ;-)

>source out there. My particular interest is in the Washington, Baltimore,
>Delaware, Philly, Princeton corridor.

T-MARC publishes a paper directory each quarter for
the Maryland, Northern Virginia, D.C., and Delaware
areas. You can pick one up at area hamfests or
send an S.A.S.E. for one to T-MARC. (*address below)

Maybe soon some kind soul will donate space for
a tricked-out Web page so that you can get this
stuff electronically, and send in forms also.

The problem with such directories is currency. Repeater
sponsors typically do not notify coordinators of changes
which affect the listings, whether or not such changes
affect the coordination of the system. Many repeaters
show on the directories, but are off the air or
require controlled access such as PL (CTCSS) which
was never mentioned at their inception.

Mostly, though, a directory is a handy enough guide
until you familiarize yourself with the territory.

T-MARC's address is:
T-MARC
PO Box 1022
Savage, MD 20763-1022

My wife Cynthia passed her Amateur class examinations in 1972 at the age
of 14. This might not sound like too much of an accomplishment in light
of today's greatly relaxed tests, but back then, when you had to copy and
send 10WPM with no errors, draw schematic diagrams (not block diagrams),
answer many narrative questions (no multiple guess), and end up with a
oral quizzing by a steely-eyed D.O.T. Radio Inspector's (no friendly
volunteer test teams), this was quite an achievement for a 14 year-old.
Her callsign is VE2QF and I'm very proud of her.

Good luck to VE6YIC (Youngest in Canada?)

782. New Windows logbook shareware!

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-11 00:00:00 UTC
From: ad4rk@cerfnet.com
Message-ID: <ad4rk.7.00072840@cerfnet.com>
Source record: 248743

I have uploaded a shareware version of a Windows logbook. I think its a pretty darn good start to a real industrial-strength logbook and station manager. What do you think?

It is available by anonymous FTP at oak.oakland.edu. I put it in the /pub3/hamradio/incoming directory, but it will probably be moved to the /pub3/hamradio directory soon.

Please take a look! Enjoy!

73s es tnx fer all!

783. Re: CAMS was: USCG goes QRT on HF CW

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-11 00:00:00 UTC
From: n9315@pnet16.navy.mil
Message-ID: <D6un83.FD9@nctams1.uucp>
Source record: 248744

Being currently stationed at NCTAMS EASTPAC (formerly NAVCAMS EASTPAC),
I can say that NMO is not a CAMS, but is 'only' USCG Commmsta Honolulu.

USCG only has two CAMS, the Navy has four. The ones for the USCG are
CAMSLANT, and CAMSPAC. The Navy's are NCTAMS LANT, EASTPAC, WESTPAC,
and MED.

Before I get asked, the Navy changed the names of the NAVCAMS about three
years ago, to reflect the influence computers are having on the comm world.
For those who don't know, NCTAMS stands for Naval Computer and Telecommuni-
cations Area Master Station.

Society.

VK2CTD AMTOR MAILBOX

DONT FORGET THAT COL VK2CTD HAS AN AMTOR MAILBOX AVAILABLE ON
7.042 MHZ FOR RETRIEVAL OF THE BROADCAST. LOGON TO THE MAILBOX
AND ASK FOR THE DIRECTORY AND THERE WILL BE THE CURRENT RTTY
BROADCAST FROM THE SOCIETY. (Check the "Help" file if needed)

LAST WEEK FOUR AMATEURS MADE USE OF THE FACILITY TO CATCH UP
ON THE NEWS. IF YOU MISS SOMETHING AND YOU HAVE AMTOR, HERE IS
A WAY OF GETTING THE NEWS AFTER THE EVENT. COL INVITES ALL TO
TRY HIS MAILBOX, THE MORE THE BETTER.

BROADCAST FLOURISHES IN THE WEST

SINCE VK6TTY WAS TAKEN BY THE OLD TIMERS CLUB IN W.A., RTTY IN
THE AREA HAS FLOURISHED. AS MANY OF YOU KNOW, THE EAST COAST-
ORIGINATED CAST IS ALSO SENT OUT BY CLEM VK6CW, WITH LOCAL
ADDITIONS AND IT IS GOOD TO SEE THE TWO CLUBS WORKING SO WELL
TOGETHER WITH RTTY THRIVING IN THIS WAY.

THE NUMBER OF CONTESTS AROUND THE WORLD POINT TO THE LONG TERM
SURVIVAL OF THIS MODE AND IT ONLY REMAINS FOR US TO DRAW AS
MANY BACK TO IT AS POSSIBLE. THANKS TO THE W.A. CLUB FOR THEIR
EFFORTS IN THIS REGARD, AND SINCERE THANKS TO CLEM FOR HIS

TIME AND WORK AS WELL.

SPDX RTTY CONTEST 22-23 APRIL (CONT.) (Note corrected dates)

10. SWL - SAME RULES APPLY AS ABOVE BUT SWL STATION WILL BE HEARD ONLY THREE TIMES THE SAME STATION AND COUNT ONCE ON EACH BAND.
11. CALLING CONTEST - CQ SP RVG TEST - FOR ALL STATION.
12. AWARDS - 1ST PLACE PLAQUE TO TOP WINNER IN ALL CLASSES, 1ST THRU 3RD PLACE CERTIFICATES, ALL THREE CLASSES IN EACH CONTINENT. NOTE - AWARDS WILL BE ISSUED BASED ON PARTICIPATION OF 20 OR MORE ENTRIES IN EACH CLASSES.
13. LOGS AND SUMMARY - BAND, DATE/TIME UTC, CALLSIGN, ALL SENT AND RECEIVED EXCHANGES TO BE LOGGED, MULTI AND POINTS CLAIMED. USE A SEPARATE SHEET FOR EACH BAND AND ADDRESS. PLEASE SEND US YOUR COMPUTER DISK./IBM, MS-DOS COMPATIBLE.
14. DEADLINE - LOGS MUST BE POSTMARKED NO LATER THAN JUNE 15th.
15. MAIL LOGS TO - SPDX RTTY, CONTEST MANAGER, CHRISTOPHER ULATOWSKI, BOX 253; 81-963 GDYNIA POLAND.
HAPPY CONTESTING

IPS WEEKLY REPORT

DX BULLETIN 15 ARLD015

This week's bulletin was made possible with information provided by Bob, WB2CJL, Tedd, KB8NW, The OPDX Bulletin, the Yankee Clipper Contest Club PacketCluster Network and the Contest Corral column from the pages of QST magazine. Thanks to all.

SPRATLY. A group of Japanese and Malaysian amateurs are on the air as 9M0A from Pulay Layang-Layang, the location of the 9M0S operation of May 1993. An early announcement of the DXpedition stated plans for CW, SSB, RTTY and perhaps even some SSTV. New England PacketCluster spots show them on 14002 kHz at 1547Z and 14195 kHz between 1440 and 1615Z. QSL via JA9AG. DU0K should be active from April 10 to 16 by a group

of Philippine amateurs.

CONWAY REEF. Due to rough seas some equipment took an unplanned swim when one of the rubber rafts overturned. However, it has been reported that two of the three planned stations are on the air. Try 7085 kHz between 1100 and 1215Z.

MAURITANIA. Listen for I2RLX, IT9AZS, IT9JNT and IT9PHY operating as 5T0AS April 1 to 20. Plans are for this DXpedition to be on all bands, CW and SSB. QSL via IT9AZS.

MALDIVE ISLANDS. Juergen, DL1IAI, has requested the call sign 8Q7AI for his April 12 to 27 stay on Kuredu Island. His hopes are to operate 160 through 20 meters. QSL via CBA.

SVALBARD. DF6JC is on the air operating the station of JW5E and signing JW/DF6JC. He has been on 14190 kHz between 1300 and 1315Z. JW0C has been worked on 14190 kHz from 1423 to 1435Z, and 14205 kHz at 1745Z.

FRANZ JOSEF LAND. There has been some talk of operations from FJL coming to a close as the stations shut down because of budgetary reasons, though some stations continue to be active. R1FJL was worked on 14014 kHz at 2253Z and RX1OX/FJL was on 14237 kHz at 0123Z.

BELIZE. Don, ZF2VW and ex-DJ0IR, will sign V31VW April 10 to 24 from san ignacio. Most activity will be on 17 and 12 meters, CW and SSB. Also check 14230, 21370 and 28410 kHz. QSL via the Vancouver Mountain Radio Club, PO Box 1622, Vancouver, WA 98668.

COMING EVENTS

APRIL 22ND-23RD SPDX RTTY CONTEST

JUNE 10th-11th VK RTTY DX CONTEST

Society information

The Society may be contacted at : PO Box 860, Crows Nest 2065 Australia, for such matters as membership and general enquiries. Enquiries can also be made by packet to the President (Col) VK2CTD @ VK2XSB, or the Secretary (Pat) VK2JPA @ VK2AAB.

News items may be sent to Broadcast Officer PO Box 60 Blacktown 2148 Australia, or by packet to VK2JPA @ VK2AAB.

Email address for the Broadcast Officer is :

patl(at)pitt.conmusic.su.oz.au

The Society welcomes news items on any digital subjects from anywhere in the broadcast coverage area. We are looking forward to news from your areas to let other amateurs know what you are doing in the hobby. Hope to hear from you.

73s de Pat VK2JPA Broadcast Officer

That concludes A.N.A.R.T.S. News Bulletin 853 09/03/95.

A COMMENT ON OTHER MATTERS:
Remember the appeal for volunteers to assist with the broadcast, made some few weeks ago. One (in fact the only critical) requirement was for reliable accurate transmission of data between the relay officer and an officer of ANARTS. Well I am pleased to report that one enthuisiast has volunteered and currently steps are being made to assess the communication situation. Even if it eventuates that this willing amateur is able to take over one of the outlets, we still will be working with a thin red (blue??) line, just how thin was demonstrated a short time ago when we were reduced to only one morning outlet plus the evening 80 metre session.

This total of one sufficiently interested volunteer in the VK2 Division makes one think!!! It seems a similar situation exists in VK3, where we understand the Divisional broadcast on voice has been reduced to once every four weeks due to manning problems....
COME ON MEGAN...PEDAL HARDER!!!!!!.

The ANARTS NEWS853 plus the comment was inserted by VK2BQS (Jim) Vice-President.

785. Yaesu pwr connector sour

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-11 00:00:00 UTC
From: robert.brandon@camel.com
Message-ID: <8A73512.00CB0031EA.uuout@camel.com>
Source record: 248746

Does anyone know of a small quantity source for the power connectors Yaesu is using these days? (Molex style, but with perpendicular spades.) I have an FT-2400 and want to rig power connections to a couple of power supplies, but I just don't want to pay $15 each at the local candy store. I could switch to another sytle, but these look like they can handle more current than the alternatives I've found.

Thanks, Robert WD5AAT

VK2 President's report

This is Michael Corbin, VK2PFQ.

After last weeks appeal for solidarity, I was most disappointed to receive, via another State, the following fax message...This Division still hasn't received our copy.

....It is addressed ... DIVISION PRESIDENTS & FEDERAL COUNCILLORS.....IT claims to be the work of WIA Federal President Neil Penfold.... NOBODY, yes NOBODY in this Division has received a copy of this letter from The federal President; The federal Media Liaison Officer or indeed the Federal Office......You will recall that the same applied to the letter I read to you last weekend. I will now read it to you....And I quote...

As you will be aware from the WIA NEWS item circulated recently (Amateur Licence Fees - $51, for now). the Institute has been invited by the government to put a submission as to how the Amateur Service might be better licensed in the future.

That submission is being researched, collated and compiled by Institute Vice Chairman Roger Harrison VK2ZRH as he was a principal party to the meeting with Paul Elliott, has been licensed for more than 30 years, has been involved in the Federal arena since the Institute's original submissions to the House of Representatives Standing Committee on Transport and Communications Infrastructure (HORSCOTCI) and during last year's submissions to the SMA on Apparatus Licensing. In addition, he is a skilled researcher and writer-which is, after all, his profession!

Since the meeting with Paul Elliott on 6 March, Roger has been gathering views and arguments from many quarters and tapping many resources appropriate to the task, from legal opinion on the Radiocommunications Act to the spectrum of views of individual amateurs and amateur groups expressed on the packet radio network, and in letters and phone calls, along with Divisions' views. The argument will win the day. I'll shortly be sending you a copy of the framework of that submission to obtain further input from Divisions.

I am aware that the President of the NSW Division, Michael Corbin, has broadcast a call for ALL AMATEURS to put submissions on the matter of fees and licensing to his Division, claiming he has a mandate from government quarters to put a submission to them and that he'll be contacting Divisions to get your cooperation in putting submissions from you, through him, to the government. It is clear that Michael Corbin has either misread the invitation or has attempted to turn it to his own advantage in an action

which is not only calculatedly divisive but will be seen by the amateur radio community, and more importantly the government, as divisive. It would be obvious to you all that, at this important juncture, the Institute needs to act as a cohesive force, with a united voice, or else any division in our ranks will be exploited as a weakness, with one side played off against the other. It would come as no surprise that the government has already sensed some factional division and has used Michael Corbin as a pawn.

It disturbs me that this situation necessitate that I write this. I urge you to throw your cooperation behind the Federal submission being developed. I know most Federal Councillors have already had discussions with Roger, and I want that cooperation to continue. Inform your members and gain their support, in any way you can. Now is the time for us all to pull together to achieve the same goal.

Yours Sincerely,

Signed Neil Penfold
Neil Penfold VK6NE, WIA Federal President.

This is a very sad state of affairs, The effort this Division has made to keep the peace seems to have all gone out the window. I undertook NOT to criticise the Federal President and his Media Liaison Officer if the same undertaking came from them. They approached me, I did not approach them. I readily agreed with the proposal, which was put to me via the Federal VK3 Councillor Alan Noble VK3BBM. For a time everything in the garden was rosey until this latest attack. I will not sit down and see the hobby of amateur radio buggered up, and I don't apologise for using the word, by people who have axes to grind when there is an issue as important as to resolve.

The facts are simply this.....Federal has been mucking around with this since December, 1993. A short stroll down memory lane is in order....You will recall that in my Broadcast of 8th January 1995 I pointed out that as a result of a meeting held on December 4th 1994 the Federal WIA agreed... Yes AGREED to help sell the fee of $71.00 to the Amateurs.... And that's from the horse's mouth. M/s Christine Goode was furious when she, as a result of the agitations of THIS division, discovered that no such thing had occured. Indeed, quite the opposite. Negotiations were suspended pending an apology. I remind you that there was NO consultation with this or any other Division let alone the Federal Councillor of this Division. on this agreement to a fee of $71.00.

Another meeting was held with our Federal people last month and once again a fee was reached...or agreed upon ....nobody knows....because again nobody was consulted. The boss of the SMA told her political minders that everything was OK......But there was one hitch....Nobody asked us the mere mortal Amateur Radio Licencees whether we were happy. So naturally we sent in more letters.....It had all blown up again. Just when all the politicians thought everything had been settled... Is it any wonder that an approach has been made to someone other than the Federal WIA!! As I said above the Federal WIA has been dealing with this since December 1993.....

Lots has been written in AR...You will recall I told you about that in my Broadcast on 15th January. Why not look up you March 1994 AR Pages 21 & 22 ...In fact why don't I read a little extract from Page 22...Middle Column 3rd Paragraph...quote "The SMA is divising a licenec fee formula (a bit complex to go into here)..." says the author.." that takes into account factors such as: spectrum location (frequency band), bandwidth, geographic location, geographic area coverage, number of users and SMA costs. Whether this formula will apply to the Amateur Radio Service or not is unclear at this stage." .... End of quote.... The question is ....What was ever done about this???? Did anyone out there see a submission. If you did what was in it?

Let me quote again from the same article. Same Column, that's the third Column, this time the 5th Paragraph. Again I quote.... In future, the SMA might charge for services in the following way:
(a) charge an individual for a licence;
(b) charge an annual licence fee comprising a TAX COMPONENT and a component for ongoing SMA costs
(c) charge for renewing licences; and
(d) charge for services requested as needed
In some instances, users may not be required to pay the tax component of a fee. .... End of quote.
The obvious question here must be .... If our Federal people knew all about this ....And they DID because it was reported in AR.. Why the hell didn't they do something about it? No wonder the SMA and the Minister have had enough...and no wonder they jacked up the fees..... There was little opposition!!! But maybe I judge too hastily. In the same Broadcast I drew attention to another article. This time on page 51. Why don't you read this while your at it and you will see references to Class Licences. The report indicates that a reasonable attempt was made to put the case for Amateur Radio but.....has anyone seen a copy? The only fair conclusion one can draw might be that it was not made clear by the SMA, at the time, that these things COULD be changed.

The fact remains that the Institute has had an opportunity to do something about its future. For whatever reasons this opportunity was not availed of to the fullest possible degree. Now we have been given yet another chance to put our case and this time it must be put as strongly as possible. Given all the above. If YOU were the Minister .... Wouldn't you ask someone different to make a submission. If you were the Minister wouldn't you insist that this time such a submission MUST BE A CONSENSUS VIEWPOINT!!! If YOU were If you were the Minister, wouldn't you be tempted to tell us all to go and jump in the lake Hmmmm!!!

In an effort to save this whole thing, I wrote yesterday to the Presidents of all divisions, all Federal Councillors and all members of the Federal Liaison team....I'll read you my letter

Dear Fellow President,

A Senior Officer in the Spectrum Management Agency commented to me this week....."It is a great shame that at a time when the hobby needs

great solidarity, particularly with the advent of cable television and it's associated interference problems, the Institute is in such internal turmoil. You blokes need to get your act together before it's too late."

To this end I am appealing to all Divisions to set aside all differences and pull together in a united effort. The internal squabbling must cease. This Division is attempting to provide a submission to the Minister. I have set out below events to date in a letter I am forwarding to all Divisional Presidents, all Federal Councillors and all members of the Spectrum Management Agency Liaison Team...

Enclosed herewith please find a copy of my Broadcast of 2nd April 1995. In this Broadcast I have discussed an approach which was made to me by a source close to the Minister to prepare a submission for him covering all aspects of amateur radio.

This source has insisted that any submission must be the CONSENSUS VIEW of ALL AMATEURS. I stress the words Consensus View. Accordingly, I seek your support in the preparation of this document. The first thing that must be addressed are the terms of reference. The Government has indicated that everything, every facet of our hobby is open for discussion. Could I suggest a method you might like to adopt to stimulate input from amateurs in your state.

(i) Create a small committee to collate all the ideas received.

(ii) Encourage members of your Division and others through your broadcasts, to make submissions to this committee. (a good starting point could be to ask them to provide you with copies of any submissions they may have made to the SMA during that fee issue.

(iii) Give weekly updates on ideas....this will stimulate further input. It is essential that input and ultimate consensus is obtained.

(iv) Submit final ideas to the members, before forwarding to this Division for collation and national distribution for comments from all participating divisions for final comments.

AIMS(Suggested)

(a) Establish the place of amateur radio, in the community.

(b) Increase community awareness of the roll amateurs play within the community with emphasis on our role in education of the young; usefulness in times of natural disaster; Wicen and similar type training events; school activities including space Shuttle Amateur Radio Experiments (SAREX); that proposal in VK4 some years back to link schools by ATV (Anything come of that I wonder?); etc. etc.

(c) Define amateur radio in terms, which would become a part of the appropriate Federal Act. This is a very very important issue.

(d) Set guidelines regarding; SMA; Role in with I.T.U. negotiations; W.I.A.'s role in I.T.U.; SMA's approach to interference with and by amateur

radio stations....etc. etc.

(e) Establish special conditions and charges for Repeaters (now up to $70 each); review costs of special event station. (NOTE: these stations will now pay $51.00 for the use of a callsign for, in most cases, only 24 hours.). Not important, you may well say but.... It is an issue of concern to a small group of Amateurs and therefore should be addressed.

This is not an exhaustive list by any means. Any additions would be appreciated.

From the enclosed correspondence from the Federal President, you might detect an unwillingness on his part to cooperate with this Division. I do not propose to comment directly except to say two things and they are:-
(i) This whole thing to date has been a case of "Father, or is it Federal, knows best". I believe that this approach has not succeeded and judging by the volume of criticism received, should not proceed along these lines.

(ii) The Federal "SMA Liaison Committee" has in the past put their views and their views only. I base this on the fact that NO attempt has been made to contact this Division or possibly your Division for any input; there was no mention in AR magazine calling for input, ideas or even the terms of reference of the latest submission. Any suggestion that nothing was in AR because...."It was too late" is incorrect. Advice could have been in the form of an insert. The distribution date of the magazine could have even been varied.

It has been indicated to me that this submission is being viewed by the Minister as.... our last "throw of the dice".

All this Division seeks to do is to facilitate the preparation of a submission which will be an exhaustive representative summery of ALL concerns of Amateur Radio operators thoughout the length and breath of Australia. A submission EVERYONE has had an opportunity to influence. A submission everyone agrees with!

It is suggested that all preliminery input should be received as soon as possible, say by the end of this month. A final draft could then be available for amendment and ultimate agreement by the end of May.

I look forward to receiving agreement from you and participation in the preparation of a truly national submission on our hobby. I have enclosed copies of correspondence which have been spread all over Australia, as well as Packet messages which have attempted to discredit my actions on this matter to date. I am doing this by way of background ONLY and as an illustration of the very thing which will destroy us if it persists.

Yours Sincerely

Michael B. Corbin
"President" VK2 Division
7th April 1995

So where do we go from here. Well if necessary we will go it alone. If Federal and it seems to me these days, Federal is only two people, if Federal won't agree, then our submission will be our submission with acknowledgment of all input received from all the divisions.

This week I have received some very good information. One ham had already gone to a great deal of trouble to prepare his own detailed submission. He sent it to us and gave us permission to use its contents as we see fit.

Once more I appeal to everyone who hears this message, or reads this message on packet, to support us. It's a case of united we stand .... you know the rest...divided we fall. It's up to you.

See you next week

Letter 6/4/95 from SMA + comment

Letter from the Spectrum Manager with a note from the VK2 President VK2PFQ

... A note from the President VK2PFQ regarding a letter from the Spectrum Manager...

The following letter was sent to the Federal president last Friday 7th April as well as being placed on the Packet Network under the Call Sign VK3SMA.

It refers to a message placed on the BBS network by a NSW amateur in which he made the following statement ... QUOTE

"The time is now for ALL amateurs who have received a renewal with increased (AND UNLAWFUL AT THIS TIME) fees, to first demand an explanation from the SMA office that issued it, THEN INITIATE A MINISTERIAL demanding to know WHY the increased tax is being levied BEFORE it is law!" ... UNQUOTE

The Spectrum Manager M/s Christine Goode has requested that we take steps to correct this erroneous statement. The VK2 Division will now Broadcast M/s Goode's letter in its entirety in the interest of fair play and without further comment.

Signed
Michael Corbin
President VK2 Division

****

Mr N. Penfold
President
WIA
Post Office Box 2175
Caulfield Junction Vic 3161

Dear Mr. Penfold

There has over recent months been a great deal of incorrect vitriolic and libellous commentary by amateur operators about the SMA and individual SMA officers, including myself. Most of this we have let pass.

I must however take issue with a recent inaccurate comment and accusation that the SMA has acted unlawfully. This is not so.

Amendments to the Radiocommunications (Taxes Collection) Act, The Radiocommunications (Transmitter Licence Tax) Act and the Radiocommunications (Receiver Licence Tax) Act which are currently before the Parliament provide for the SMA to allow licensees greater flexibility in the way they pay licence fees. The amendments will allow, for a licence of more than 1 years duration, payment up front for the whole period of the licence or payment by annual instalment. There is nothing in the amendments relating to the setting of fees and certainly nothing relating to setting of fees for amateurs.

The power for the SMA to determine taxes has existed since July 1993 and has been used on a number of occasions. The determinations of fees to take effect from 3 April were made pursuant to Section 7 of the Radiocommunications (Transmitter Licence Tax) Act and Section 7 of the Radiocommunications (Receiver Licence Tax) Act.

Likewise the power for the SMA to determine cost recovery charges under Section 293 of the Radiocommunications Act has existed since 1 July 1993. The SMA also exercised that power and determined a set of charges with effect from 3 April 1993.

The extent of misinformation being distributed around the WIA and its members is most disturbing and makes sensible consultation and the exchange of factual information between the SMA and the WIA all the more difficult.

I ask that you take steps quickly to correct the erroneous material accusing the SMA of acting unlawfully.

Yours sincerely

Christine Goode
Spectrum Manager
6 April 1995

Letter 7/4/95 from SMA

The following letter from the Spectrum Manager M/s Christine Goode has been forwarded to us by the Federal President.

Further to my letter of 6 April 1995 I am able to advise that the SMA has resolved the anomaly that caused a renewal notice for an apparatus licence with excessive fees being mailed to the licensee

of several amateur television repeaters.

As I previously advised in my letter of 31 March 1995 to Mr. Penfold, Federal President of the Wireless Institute of Australia, amateur repeaters and beacons are considered assigned services as they are required to be frequency coordinated by the SMA with all other radiocommunications services, including those not in amateur bands. As such they are not covered by the standard annual amortised fee of $51 per individual licence.

The initial issue fee for repeaters and beacons is charged at an hourly rate of $91 (minmum fee of $45.50 for half hour). However, once licensed the annual reissue fee is then the minimum of $24. This minimum fee applies per transmitter, but any associated links are covered by that one transmitter licence.

The renewal fee of $24 applies to amateur television repeaters as well as to narrow band repeaters and beacons. SMA area offices will adjust any anomalous fees when licensees renew. Your members should contact their nearest SMA office if they have any specific concerns.

I would appreciate you bringing this information to the attention of your members.

Yours sincerely

for Christine Goode

Spectrum Manager

Federal news

Amateur wins international science award

Scientist, Dr. Kem McCracken a radio amateur (VK2CAX) and founding chief of the CSIRO's Division of Mineral Physics, has shared the 1995 Australia Prize, awarded to researchers who have made out-standing contributions to science and technology promoting human welfare.

An international award, the $300,000 prize was shared with Dr. Andrew Green and Dr. Jonathan Huntington, of the CSIRO Division of Exploration and Mining, and Dr. Richard Moore, Emeritus Professor of Electrical and Computer Engineering at the University of Kansas, USA.

The award was announced in February by Senator Peter Cook, the Minister for Science.

Senator Cook said Dr. McCracken, Dr. Green and Dr. Huntington were an outstanding research team which had pioneered satellite-base remote sensing in Australia.

In the late-1970s, Dr. McCracken coordinated a propagation study, project ASERT, for the Federal WIA.

Letter from Div. solicitors

"That"...court case

The following letter has been received by the "President" from the Divisional solicitor Lewarne & Goldsmith of Parramatta
and I quote ...

Mr. M. Corbin
80 Lalor Road
Quakers Hill 2763

Dear Sir,

Re: The Wireless Institute of Australia
New South Wales Division

We refer to your telephone conversation with the writer earlier today and confirm that your application in the above matter is to be heard at 9.30 a.m. on 21st April 1995.

We further confirm Counsel's advice that you inform all members of the Institute of the time and date by way of a broadcast. Please keep a transcript of the Broadcast so that we can annex it to an Affidavit of Notification which the writer shall prepare before 21st April.

Yours faithfully
Lewarne & Goldsmith

Divisional news

Urunga Radio Convention

Next week is the Urunga Convention and it is essential to bring your money with you if you attend -- but more... No, there's no hidden charges in store for you just books to purchase. Tim Mills, VK2ZTM, has kindly offered to take a bootload of assorted materials for sale at the convention.

So if you need the latest copy of ARRL antenna book - this edition comes complete with software -- the 1995 ARRL Handbook, or simply a copy of our own 1995 callbook, Timothy will only be too pleased to sell you one.

For those who don't have cash, well, we'll take your plastic money also. Remember, members get 10 per cent discount for cash, 5 per cent for plastic. And as they say in the NRMA - it pays to belong.

Magazine roundup

Magazine Roundup

Here again is a summary of the local magazines, which in the author's opinion could be of interest to Amateurs. This week we discuss the April issues of the various magazines.

"Electronics Australia" discusses how "Smart Cards" work; technically-inclined people who are retired or otherwise have some spare time are encouraged to teach the young; a simple alignment generator for 455 KHz and 10.7 MHz is constructed, as is a 24-channel digital trigger adaptor; and those with an automotive bent are shown how to use an oscilloscope for vehicle fault-finding. Those looking for a apology from Jim Rowe for his incorrect claims last month are advised to wait until the May issue, due to publishing lead times.

"Silicon Chip" builds a simple FM receiver suitable for learning the basics of frequency modulation; a photographic timer, suitable for timing those long overs, is constructed; an 8-channel remote control receiver is described; and fault-finding techniques on vintage receivers are demonstrated.

"Amateur Radio" describes a 150-watt hand-held SSB transceiver (which does NOT appear to be an April Fool joke); a "Back to Basics" transmitter for 40m or 80m, to team with last month's receiver is constructed; part two of an "L of a Network", describing the "L-Match", is continued; a simple TVI filter made from a cat-food tin is described, as is an underground communications system employing a Very Low Frequency of 874 Hz; those with more brains than brawn will appreciate the article on QRP techniques; and instructions on how to modify the FM-828E for 6m are introduced.

"Amateur Radio Action" leads with a story about how the proposed fee rise could be beneficial after all; the Global Positioning System (GPS) is explained; antennas for weather satellite reception are discussed; advanced digital modes are described; and a simple 15m direct conversion receiver is constructed, as is a simple "hands-free" adaptor for those states that forbid the use of microphones when mobile (NSW may well follow suit).

Be listening next month for another summary of the local magazines.

-- Dave Horsfall VK2KFU

VK2 WICEN news

VK2 WICEN News

All WICEN members who have not renewed by now are unfinancial; it would be a good idea if you paid your subscriptions before the AGM in July. A renewal form appears in the latest newsletter, which is now starting to arrive. In the meantime, it appears that the Federal Government is interested in hearing about the "community benefit" aspects of Amateur radio, so this would be an excellent

opportunity to publicise WICEN's role.

The Hunter WICEN region have a meeting on 17th April, presided over by Pauline VK2GTB, and the Hunter Anzac March, commanded by John VK2JRC is on 25th April. Finally, the Oberon Car Rally is on 29th April, with about 20 people required; please contact Alan VK2YYJ via packet radio at VK2CZR, or at work on (02) 839-1388.

Looking ahead next month, there is the Hawkesbury Bridge to Bridge Speedboat Race on 7th May, for which David VK2KLX is looking for volunteers; the annual Goulburn Training Seminar is on the weekend of 13-14th May, along with the Rathmines Fun Run co-ordinated by Steve VK2KBL; the Wyong Car Rally is on the weekend of 20th-21st May, co-ordinated by David VK2UDT and Andy VK2XRX; and the Variety Club of Australia Newcastle Bash is on 23rd-26th May, with Maurie VK2CD in charge. Finally, the closing date for the Annual Reports is 30th May.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Blue Mountains on the first Monday of each month at 8.30pm on channel 7175 simplex, Hunter each Wednesday at 7.30pm on channel 6900, Northern Rivers each Wednesday at 8pm around 3610 kHz, Central Coast each Thursday at 8.30pm on channel 7125, and Sydney each Thursday at 9.30pm on channels 7150/8275. If there are any other regular nets then we'd like to hear about them.

-- Dave VK2KFU, WICEN (NSW) Inc. Publicity Officer

News briefs

United Kingdom telephone area codes to change

Those of you who ring friends and relatives in the UK should be aware that from 16 April, all UK telephone area codes will change. With five exceptions (listed below), all UK area codes will acquire a leading digit "1". So, for example, when calling Amsat-UK from overseas after 16 April, the area code changes from "81" to "181".

The change is designed to ensure that Britain has enough dialling codes to last well into the next century. Remember, the old area codes will cease to work after 16 April; the new ones are already activated. So start changing your memory phones and databases now!

Please note that there are five exceptions, which are as follows:

City	Old code	New code
Leeds	532	1132
Sheffield	742	1142
Nottingham	602	1159

Leicester 533 1162
Bristol 272 1179

With all other UK area codes, simply add and extra "1" in front of the existing area code.

--James G3RUH on Internet, relayed by David Horsfall VK2KFU

US Coast Guard closes CW

US Coastguard sends its last HF CW message

The United States Coast Guard bid Morse Code a fond farewell over the weekend. The last message sent from the coast guard station at Chesapeake, Virginia was as follows:

USCG now closing down continuous HFCW watch ceasing all morse code ops in the HF band. As we conclude our watch we wish the maritime community fair winds and following seas. We are proud of our tradition and long standing service to the mariner on morse code beginning in 1901 with the Revenue Cutter Service experimenting with wireless as a means to communicate on land and sea to the first morse code radio installed aborad cutter Grant in 1903. Our orig comms mission was to rcv distress alerts. But since 1901 the CG has faithfully and diligently listened for traffic responding to hundreds of thousands of calls fm mariners in need of assist or rptg position wx nav or safety info. Over the yrs we have provided mariners with urgent safety and nav warnings over HFCW and rcvd vessel location updates for the AMVER sys. We will feel a sense of loss with the passing of CW. The need for operators with sensitive ears and a fast precise key will be replaced by computer modems and auto alarms. The special emotion and excitement enjoyed by CW operators cannot be duplicated and the chilling S O S sugnal will never again be rcvd by a CG unit. But CW has run its course and now we look fwd to serving you on the next generation of comm systems via the GMDSS. Fm all CG telecomm specialists we bid you a 73. What hath God wrought. Signed CG CAMSLANT

***

Finally, a reminder of the value some countries place on Amateur Radio: according to AM news broadcast station WWJ in Detroit, USA, April is Amateur Radio Month!

--Jay N8JTR on Internet

Contest news

Contest News

Another regular part of the Broadcast, popular in the past, now makes a return. Every so often, both recent and forthcoming events of interest to VK2 Members and listeners will be summarised, and we acknowledge "Amateur Radio" magazine as the

source of much of this material.

It seems that a computer system called TACO (for "Totally Automated Computer Operation") was used in the CW portion of last year's ARRL 10m Contest and the CQWW Contest, and it made a respectable 100 contacts. Given the prevalence of packet radio "DX Cluster" software, we wonder how long it will be before a computer scores DXCC for you.

The results of the 1994-1995 Ross Hull Contest have been published, and it seems that VK3XRS won yet again, with Gordon VK2ZAB coming a close third. Of interest to VK2 listeners is that Bob VK2GLS once again cleaned up on 6m (although sharing that honour with VK5ZBK), with most of his contacts being New Zealand stations. Also published were the results of the 1995 VHF-UHF Field Day, and we are proud to say the winner of the Single Operator 24-hour section was Rod VK2TWR.

With this sudden resurgence by VK2 in contesting, perhaps we can work towards getting the Remembrance Day Trophy returned to its rightful home here in VK2; it has not graced the cabinet at Parramatta for quite some time now. Further publicity for this important contest will be given later towards the event.

You need the UT-50 subtone unit.

I have a 3SAT, the 220Mhz version with the UT-50 installed.

I would like to ship parts from US to Japan via surface parcel post.
I remember the rate is $6.50 for the initial 2 lbs and $2.10/lbs for
the weight exceeding 2 lbs. Am I correct? What about insurance rate?

Alternatively, do you know the cheapest door-to-door air service? To
my knowledge, UPS is the cheapest. Am I correct?

The parts weighs 32kg or 70lbs and can be divided into two or three.

--------------------------------------------------------------------------
~Subject: The contents:
-----------------------

This file contains information about the following QRP clubs:

o 9A-QRP Club
o Arbeitsgemeinschaft CW / Activity Group Telegraphy (AGCW-DL)
o QRP Club ARI
o QRP Amateur Radio Club International (QRP ARCI)
o Benelux-QRP Club
o Grupo-QRP do Brasil
o QRP Club of British Columbia (BC QRP)
o QRP Society of Central Pennsylvania (QSCP)
o Cleveland QRP Amateur Radio Club
o Colorado QRP Club (CQC)
o CW Operators QRP Club
o EA QRP Club
o G-QRP Club (G-QRP-C)
o Italian QRP Club (I QRP)
o JARL QRP Club (JA-QRP)
o MFJ 90's Radio Club
o Michigan QRP Club (MI QRP, M-QRP)
o The QRP Club of New England (NE QRP)
o The QRP Club of Northern California (NorCal QRP)
o NorthEastern Illinois QRP Society (NEIQS)
o The NorthWest QRP Club (NW QRP)
o NorthTexas QRP Club (NorTex, NQC)
o OK QRP Club (from the Czech Republic)
o Oklahoma QRP Club (OK QRP)
o St. Louis QRP Society (SLQS)
```

o U-QRP Club
o WI QRP Club
o ZS-Algoa QRP Group

The ordering of this list is somewhat arbitrary though it tries to follow the alphabet :-) No weighing is intended.

Two list entries here are somewhat special:

- The "MFJ 90's Radio Club" is focussed on the MFJ 90xx series of QRP transceivers but not affiliated with the company. Rather than being a club it is more a newsletter and its readership.

- The "AGCW-DL" is not a QRP club but rather a CW club. It is in the list because of its strong QRP activites and because there is no dedicated German QRP club.

In addition to all that you'll also find information about defunct clubs and newsletters, ceased activities, 'unofficial' groups and a small paragraph about the world famous INET QRP Club ;-)

Spelling and punctuation tries to follow European standards.

~Subject: The format:

ABBR: Abbreviation
FULL: Full name
PRES: Club President
ADDR: Contact address for membership and info
SINC: In existance since ...
COST: Membership cost (yearly)
NEWS: Club newsletter, name and frequency
NUMB: Current membership numbers (approximately)
MEET: Regular meeting
QNET: QRP nets, 'on the air' meetings
PROJ: Previous and current projects
TEST: Contests, activity periods
AWRD: Awards
COMM: Comments

The NUMB entry is only meant to give a rough indication about how big the club is. The numbers given are not precise and cannot be. The number of active members is not equal to the last issued membership number - some former members are SK now or have left the club. A good indication of active membership numbers is the number of people that subscribe to the club newsletter.

The PROJ entry isn't meant to be a listing of all the building projects that any club member has ever done. Rather it should list all the projects that were designed by a club member, were realized by several others and are available as a circuit diagram, kit or

whatever. This entry shows you where household names like 'Epiphyte'
or 'Sierra' originated.

Similar story with the TEST entry: It is not a list of activities the
particular club *participates* in, but rather a list of activities
that *originate* within the club. There is no space to give details.
By supplying the name everybody can see that a special activity exists
which will give him the starter to ask for more information.

I would also like to supply information about regular 'on the air'
meetings of the clubs (entry QNET). If you know about such activities,
please notify me; my address is at the end of this file.

In this revision of the QRP Clubs List lots of entries are empty,
because information is missing. I didn't delete them to encourage
feedback so that I can make the list more complete. But I know it
looks stupid - so this will change in future revisions of the list.

Addresses in <brackets> are Internet email addresses; those in
[brackets] are valid in the Amateur Packet Radio network.

PRES: Interim President: Buck Switzer, N8QCA
(Pres. Les Shattuck, WN2V, has resigned)
ADDR: USA:
ARCI
c/o Mike Bryce, WB8VGE <73357.222@CompuServe.COM>
2225 Mayflower NW

Massillon, OH 44647
USA

GB:
Dick Pascoe, G0BPS <dick@kanga.demon.co.uk>
Seaview House
Crete Road East
Folkestone, Kent CT18 7EG
ENGLAND

SINC: 1961, adopted the 'true QRP' power limit of 5 watts in 1979
COST: USA: $14 new member, $12 renewal
DX: 7 Pounds new member, 6 Pounds renewal
NEWS: "QRP Quarterly" (QQ), quarterly (January, April, July,
October)
NUMB: 8.800 (assigned membership numbers)
1.500 (subscribed to newsletter)
MEET: de facto annual meeting at Dayton
QNET: ARCI sponsored nets:
Transcontinental Net (TCN) : Sundays, 23:00 UTC, 14.060 MHz
Western States Net (WSN-80): Sundays, 04:00 UTC, 3.558 MHz
Southeast Net (SEN) : Tuesdays, 00:01 UTC, 7.030 MHz
Gulf States Net (GSN) : Wednesdays, 02:00 UTC, 3.560 MHz
Great Lakes Net (GLN) : Wednesdays, 02:00 UTC, 3.560 MHz
Northeast Net (NEN) : Saturdays, 12:00 UTC, 7.040 MHz
Western States Net (WSN) : Saturdays, 16:00 UTC, 7.040 MHz
Some nets change frequencies and times with the arrival of
Daylight Savings Time.
PROJ: Twofer Transmitter (in the 80's)
TEST: Spring QSO Party, Fall QSO Party, a variety of sprints for
both CW and SSB
AWRD: QRP-25, WAC-QRP, WAS-QRP, DXCC-QRP, 1000-mile-per-watt
(kM/W), QRP-NET (QNI-25)
COMM: The QRP ARCI promotes on the air QRP operation, the use of
designated QRP calling frequencies, regular QRP nets, and a
program of QRP operating awards and contests. Oldest
organisation of its kind; but since the 5 watts power limit
was adopted only later, the G-QRP Club is arguably the first
real QRP club still in existance.

~~~~~~

ABBR: BQC
FULL: Benelux-QRP Club
PRES: ---

o "The Milliwatt" (1970-1975)
o EA8 QRP-DX Club

~Subject: 'Unofficial' groups:
----

o The DRAGONSLAYERS QRP Group

This is mainly a Dutch group of amateurs with guest members
from two other countries only. Dick Pascoe, G0BPS, is the only
~~~~~~

British member. Three Germans are also members being a family, husband, wife and son. There are no membership fees, no magazine, no contests etc, just a group of friends. Membership is by invitation only!

o Zuni Looper Mountain Expeditionary Force

This is a local gathering of QRP ARCI members in Southern California, who operate Field Day with QRP; the name refers to the particular part of the State or National Park they always operate from (the Zuni Loop area of the park). They are well known and admired for the *HUGE* wire antennas they erect.

o Maryland Milliwatt Club

The club was founded in 1992 by two members. Membership is by invitation only. Mailing Address: Maryland Milliwatt Club, 3052 Fairland Rd, Silver Spring, MD 20904.

o World QRP Federation (WQF)

The only thing I know is that Gus, G8PG is president. I suppose it's a kind of QRP cover organisation. Can anyone give more info on this?

o The WVQRP Commandos

o The LIMARC QRP Heavy Hitters
(LIMARC = Long Island Mobile Amateur Radio Club)

o Old Coots QRP Group

~Subject: Acknowledgments:

I was using the club list maintained by Bill Kelsey, N8ET, as a basis for this list. Much later when perusing the QRP-L archives I discovered that Chuck Adams, K5FO, had already compiled a list which contained clubs that I didn't know about. Additional information came from other contributions to QRP-L and from assorted printed material, most notably publications of the G-QRP Club. Thanks for very helpful contributions and corrections from (sorted by callsign):

provided herein. The editor takes no responsibility for any damages
resulting from the information provided in this list. If you are in
doubt, please post a question to the QRP-L mailing list or ask your
local elmer :-)

~Subject: Update information:

This is what I call a beta version of the QRP Clubs List. I intend to
to make this list up to date and as complete as possible. Therefore I
need your help.

If you find outdated information or errors in this list, please let me
know. If you know of any QRP club that you feel should be in this
list, then let me know, too. The same applies if you have ideas on how
to improve this list. Since English is a second language to me, I'd

also be grateful for hints on mistakes with grammar or vocabulary.
Please note that I try to stick to European conventions in spelling
and punctuation 'cause this is what I learned in school.

For the most up-to-date copy of this list, send email to
<sz0026@daphne.rrze.uni-erlangen.de> or a packet radio message to
[dl8mfq@db0sif.deu.eu]. From version 1.00 onwards this file will be
available via a FTP site also (probably SUNSITE.UNC.EDU).

: to have all the frills (CTSS, DTMF, etc.)

I don't know if you will really find a good waterproof unit, however I might suggest what I do when I go sailing..... Most big boating suppliers handle HT type xcvrs for ship-to-shore communications. Last time I visited a shop in the San Francisco Bay Area they were selling Icoms. Very similar in size to the HT's hams use. For these HT's they sold a clear vinyl pouch sort of like a heavy duty ziplock plastic bag, custom fit to accept the ducky antenna. Obviously, one can push buttons, transmit,rcv thru the 'baggy'. They are very effective for this type of use......

If you need more specific help, I could try to find a bay area phone book and get you a phone number.

797. re: 5W limit on Toyota Camry applies to which years/models?

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-11 00:00:00 UTC
From: phillips@eso.mc.xerox.COM
Message-ID: <9504110123.AA06902@zombi.eso.mc.xerox.com>
Source record: 248758

I just called my buddy at Toyota who is a technical training
instructor. He saysthat ham radios are not a problem in Toyotas if you
observe installation precautions:

1. DO NOT run your coax parallel to any car wiring harnesses.
DO NOT run your coax or power wires thru the door sills as this
is where there are some wiring harnesses. The best route is
down the middle of the floor board.

2. once you exit the faraday cage (the body) the RF radiation
is not a problem at all. (so use any antenna you like)

3. If you MUST cross a car wiring harness with your coax, do it at
right angles to the wiring harness.

4. He knew of no technical bulletins or warnings and specifically
didn't think the '87 Camry would be a problem because of it's
limited electronics.

There have been incidents of the Cressida's sun roof opening unexpectedly
because the switch for it is a "logic switch" and a transistor actually
applies power to the motor.

1 (800) 331-4331 Toyota National Customer Relations; tho they will likely
refer you to your regional service center, who will in turn tell you:
"Don't do it, but if you do and it breaks, it's your fault." Typical
response from someone who doesn't know. I believe it was a QST article
that questioned car manufacturers on this subject and published the results.
I don't know where it is.... does anyone remember?

My friend does know of many people with high power (100+ watts) ham
radios in their Toyotas, and they are having no trouble. He mentioned
that "touble" would be in the form of "gas mileage loss", "stalling",
or other "eratic engine behavior".

>My girlfriend is considering purchasing a 2 meter HT. The Kenwood
>TH-22AT strikes her fancy and I am wondering what kind of experiences
>people have had with it. Is it a good radio? Any quality problems? Any
>other radios to recommend?

My TH-22 has been fine. I only remember how to operate about 30% of the features, but realistically I just use the 15-odd repeaters I have programmed plus the NOAA weather channel. The standard battery lasts 6 hours or so on receive. The rubber duck antenna is adequate around town. With a telescoping antenna I can raise pretty distant (20 miles) repeaters. Most importantly, the radio is so small that I usually take it with me, and any radio at all is preferable to the best radio that you left at home!

If an abacus works fine for addition, why did you bother to buy a calculator?

The point he was making was that 1 microchip performed the job of hundreds
of vacuum tubes. And, the "microchip" probably costs less too. Yet, the
government's purchasing bureaucracy doesn't let you buy the cheaper,
better technology.

801. 20m 40m and marine SSB TX options?

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-11 00:00:00 UTC
From: matt@uhunix3.uhcc.Hawaii.Edu
Message-ID: <D6usFK.FHL@news.hawaii.edu>
Source record: 248762

Friends are about to leave on an around the world sailing trip.
They would like a radio for communication with the outside world.
One of their parents is a new HAM, and has convinced them to get
licenced as well. To encourage this I'd like to find them a set
for the boat.

What are their options for an inexpensive TX covering at least
20m 40m and the marine SSB frequecies?
What frequencies are allocated to marine SSB anyway?

Sorry to ask such general and uninformed questions. Any help would
be appreciated.

Thanks.

Nice try Chief,

You posted; so - it is true, the Revenue Marine Cutter Service (became the USCG) had a height requirement - it was so they could board, beat the #*$&ing #*%& out of the vessels crew, as required; in the process of discharging their duties. Fortunately, we (the USA) have been overcome with civil methods and technology. This is no longer a requirement. (Besides, for us that are less than 6', we get straws and learn to dog paddle in basic training!)

I'm respectfully of all the services and wish more would understand that the USA would be better served by using the differences in our armed forces to our collective advantage. Many lives have been lost for lack of understanding and inter-service communication. (Oh, that's how the USCG height requirements relate communication and therefore to "rec.radio.amateur.misc"! Thought I was way off base for awhile - but I made it work.) Feel free to E-mail me direct.

Walt/KF0OS

I call called The Tandy Repair Center. They told me they are waiting for parts. They said it will take 3-4 weeks from March 28th for the parts to come in. Now I understand they can't keep ever part in stock, but I do have a couple of problems.

1. If it takes so long to get parts, maybe they should come up with a new system.

2. I was told by the Radio Shack saleperson that if it took longer than two weeks that the Tandy Service Center was supposed to call or write me.

3. the woman answering the phone at the Tandy Service Center could not been more rude if she tried.

Sorry to complain, but Saturday we had some major storms here in Bloomington, and the local hams did some great work helping the police and other rescue efforts. I was sorry I miss out on the chance to help.

809. Island News Bulletin - #008 - (IK1TZO)

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-11 00:00:00 UTC
From: Piero Pirrone <IK1TZO@inrete.alpcom.it>
Message-ID: <3me9e7$pc5@galileo.polito.it>
Source record: 248770

Hi Dear Fellow Hunters,

This bulletin is based on Island News Bulletin, (march 95 issue).
Island News is a bulletin sent via mail to subscribers. If you want to receive
via Internet e-mail a copy of Island News Bulletin, please send a message to:
IK1TZO.inrete.alpcom.it

Island News, is edited by IK1TZO (me) (Island Hunter and activator).
This bulletin born in Italian IOTA and island environment. I'm member of
Diamond DX Club, and distributor and amministrator of Italian IOTA Directory
(on paper and software for EasyLog).

For this reason we are in contact with Italian IOTA Check Point (IK1GPG),
G3KMA Roger Balister (RSGB IOTA Director), I8IYW Peppino (active DXer and
IOTA hunter), I1HYW Gianni (famous IOTA hunter), EA5KB Pepe, I1JQJ member
of IOTA Committee etc.

We have dialy contacts with most active IOTA and DXer fellows, in Italy,
and Europe, if you have some questions about operations please contact us,
we try to help you.

If you have some questions about IOTA, rules, you can send a message to me.
If you have info about new operations, please send a message, I include them
on next bulletin.

Suggestions, comments, informations are welcome.

I've finally gotten around to adding mailto to the comments section at the bottom of each of the pages.

For those not aware of mailto: If you have any type of Web browser (graphical or text), mailto gives you the option to send the addressee an e-mail message containing your comments. When your message is complete, it is sent to addressee.

Please take advantage of the e-mail feedback now on both pages.

Remember, they are located near the bottom of each page of BARC and ARRL.

The URLs for each page are shown in my .signature at the end of this message, but I'll still include them here.

The FAA has ALREADY invested almost $8,000,000,000 to replace has
nothing, nada, zip, to show for it.

Last week the FAA announced that air service to the Wash-Boston-NY
area was going to be curtailed due to personal shortages. Why are
there personal shortages? Because they've been hiring for an automated
system that they can't deliver, so there are stuck with manual system
which is too expensive to man (er "person") and maintain.

>that everything is fine. ...

Russ:

The problem is that the system IS breaking down. Mr. Newt didn't make
it clear that the FAA has ALREADY spent almost $8,000,000,000 on modernization,
and has almost nothing to show for it.

Last week the FAA announced that IFR traffic into the NYC area will
be curtailed because of equipment and personal shortages.

They have been hiring to support an automated system, but still have
to man a manual system. They don't have enough controllers or money
to keep the system where it is, let alone actually improve service. Not even
Uncle Sam can afford tubes anymore.

814. Dayton hamvention shopping list

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-11 00:00:00 UTC
From: robertp@meaddata.com
Message-ID: <3mei62$bpk@meaddata.meaddata.com>
Source record: 248775

Speaking of the hamvention, one of the items I will be seeking is a glass mount antenna for my wife's new car. She does not want a mag-mount antenna so I am interested in suggestions for glass mounts. We currently run 2m but plan to expand to a dual bander when the budget allows.

[more stuff deleted]

Chris Arndt recommended this same type of solution over email, as well as getting a radio with a speaker/mike (he recommended the Yaesu FT 51R) so that only the (hopefully cheap) speaker/mike is exposed to the elements. This is probably the way I'm going to go, with an RS HTX-202 as the radio (speaker/mike costs only $20, really cheap to replace).

So, thanks for the info!

>relatively high power, I believe.

I think we're having a severe lack of communication here. In any radar
set the vast majority of the circuitry operates at low power. I
repaired marine radars while in college 20 years ago and even then 99%
of the active components were solid state. The proper response to the
original picture tube comment would be to note that it's the *only*
tube in any set made in the last 15-20 years.
>
>Like it or not, tubes will be with us well into the next century.
>What do TV stations use? 4CX250's for drivers, among other
applications.

Of course. Like picture tubes there are still cases where VT
technology is the cheapest and most effective solution. That doesn't
justify using 6SK7s in IF strips or 6SN7s in timing circuits any more.

From ARRL Headquarters
Newington CT April 10, 1995
To all radio amateurs

SB SPCL ARL ARLX017
ARLX017 US grant to Ukraine

U.S. grant to Ukraine

Ukrainian Amateur Radio operators will benefit from a 24,987 dollar
grant from the US Agency for International Development.

The grant, from USAID through the Eurasia Foundation, was obtained
by a proposal made by the Foundation for Amateur International Radio
Service, a nonprofit public foundation founded in May 1991. FAIRS
has charter groups in Ukraine, Guyana, Bangladesh, and Russia.

The grant will fund electronics hardware to extend APLINK coverage
to Kiev from the Western Ukraine, with nodes also going to Hungary,
the Czech Republic, and Poland. An Internet gateway also is
planned, as well as an additional APLINK station and an FM repeater
in western Ukraine.

Delivery of the equipment is expected by early summer, and will include hardware for seven digipeater nodes, including terminal node controllers, radios, and antennas. About 35 Ukrainian amateurs have packet capability in the current APLINK system.

The FAIRS grant proposal was written by Executive Director David Larsen, KK4WW, and European Director Victor Goncharsky, US5WE.

A previous FAIRS project, training of prospective amateurs in Bangladesh, was described in September 1993 QST, on page 86.

Well, I guess I stand informed. I had not thought of Russia. What I have is a MAC application that lists out all the callsigns either by call or country. It would seem to be a little old. Thanks for the info.

Subject: DSP & mobile operation

Greetings All:

I wonder if anyone on this conference that has used DSP to improve mobile reception would let us know how well it works?

Quite often when I am mobile on 40 there is quite a bit of hydro noise from the lines along the highway right-of-ways and I have often thought DSP might be a big help under such conditions. Also I wonder how it handles the classic ignition noise problems and also the noise from the modern automotive electronics?

I wonder if anyone has come out with a DSP firmware package that is specifically designed for the mobile environment?

BR>These are great general suggestions, but again, they do not really
BR>make it easy to build-up. You are asking me to become a circuit design
BR>engineer which is beyond my training and the time and resources
BR>available. I was hoping for a practical circuit that would let me
BR>not only RING the local phone, but also allow two phones to talk to each
BR>other without any help from Ma Bell.

Brian -
I invented a little circuit that would do what you desire. It
requires the use of a DC power supply in around the 40 - 60 volt range.
Do you have access to such a power supply? If so, I will snail-mail you
the circuit if you provide me your address on your e-mail reply to this.
:)

My circuit uses a DPDT relay to switch the 40-60 volts DC back
and forth to the phone, simulating the ringing voltage that Ma Bell
uses. It works quite well in fooling so-called "electronic" telephones,
but might be a little weak for an old "mechanical ringer" telephone.

Let me know what kind of DC power supply you might be able to
get ahold of. I will calculate the resistor values that you will need,
and send you the circuit, and notes on construction.

Also, please let me know if you have a Radio Shack store near
you. If so, I can give you their part numbers for everything.

- Mike.

From: paulc@fc.hp.com (Paul Christofanelli)
Subject: Linked Repeaters & Driving Vacation

Colorado Connection Repeaters:

Mountain ranges make the coverage of the repeaters hard to describe, but here's a stab. The limits of the coverages described are based on a 50 watt power output to a decent car top antenna. In the mid ranges, an HT generally works well.

145.400 - Akron, 4,157 ft.

Covers parts of NE Colorado.

145.310 - near Boulder on Mt. Thorodin, 10,385 ft.

Using I-25 as a north-south reference, it covers from about Cheyenne, Wyo to about halfway between Denver and Colorado Springs. It goes east about 100 miles and west along I-70 to the Eisenhower Tunnel, approx. 60 miles from Denver. The main repeater in the system.

145.130 - Colorado Springs, approx. 6,200 ft.

This is a relatively low elevation repeater which mostly only serves the local C. Springs area.

146.790 - Breckenridge area, approx. 12,500 ft.

Covers from the Eisenhower Tunnel west to Vail Pass, with some dropouts. Covers the Dillon area very well.

147.075 - Kremmling, approx. 9,200 ft.

Covers from Dillon/Breckenridge area to north of Kremmling, and US40 from around Winter Park north to near Rabbit Ears Pass. Gets desensed a fair amount from nearby packet repeater. Spotty along I-70 west of Beaver Creek/Avon.

145.445 - Mosquito Pass, near Leadville, approx. 13,000+ feet.

Covers I-70 spottily from around Copper Mtn west through Vail to Eagle and the entrance to Glenwood Canyon. Covers South Park (Fairplay, etc.) well. Gets down to Ca7on city. Covers from Copper Mtn. south thru Leadville to around Buena Vista on US 24.

147.285 - Salida, approx. 11,700 ft. (Methodist Mountain)

Covers from about Buena Vista on the north (US24) over Poncha Pass down into the San Luis Valley and down past Alamosa to near the New Mexico border.

146.985 - Rifle, approx. 8,729 ft.

Covers from Glenwood Springs west into parts of Grand Junction. Once I-70 climbs back up into Utah, it can be accessed very spottily around Crescent Junction north of Moab. It's also been worked from Canyonlands N.P. near Moab at an elevation of about 6000 feet (about 170 miles away). It also covers parts of NW Colorado and NE Utah.

147.285 - Grand Junction, approx. 5200 ft.

Mostly a local area machine that also covers south towards
Montrose (I believe). I've heard a report of it being
heard as far west as Green River, Utah.

Have fun!

writes:

>>Saw Gringrich's speech Friday night and he mentioned that the federal
>>government is the biggest buyer of vacuum tubes, for the FAA. He used
>>what looked like an octal based tube, with a bulb-ish shape. Something
>>like a 5U4 envelope, but the insides looked like a pentode. He described
>>it as 1950's technology. Vs a "micro-chip", (an IC like a '386) "1990's
>>technology". Noone calls 'em "microchips"!

What I thought was interesting was that, even with all these "obsolete"
vacuum tubes, Air Traffic Control still works very well. As a pilot, I know
that everything is fine. What Gingrich is saying is akin to saying that I
should upgrade my 386sx/25, even though it works perfectly well for what I
need to do (get on usenet and type papers). I have no need for a 100MHz
Pentium, because it wouldn't help me do anything better. New technology is
great, but if the old stuff still works fine, why replace it?

Russ

From: scurrie@VNET.IBM.COM (Scott D. Currie)
Subject: Update: Ignition noise, S10 Blazer

Thanks to all those who sent me suggestions on my noise problem.
I need to try a couple more items, but to answer the questions many
of you asked:

Although this is a new HF install, it is by no means the first radio
installation in this vehicle. Already installed are 3 VHF/UHF FM
radios and a scanner, none of these radios experience any noise.

The HF radio is connected to the same power buss as the other radios
which is a 15 foot run of #8 direct to the battery terminals.

The antenna is a Hustler mast mounted to the rear bumper (I literally
drilled a hole through the bumper!) with an additional bond strip
connected to the body about 3 inches away. The antenna is fed with
RG8X run to the radio which is mounted to the rear of the arm rest
compartment.

Running the HF radio off a different power source (large battery in
the back seat) does not reduce the noise.

Removing the antenna from the mount (it has a bayonet adapter) does no reduce the noise. Disconnecting the antenna at the radio makes the noise go away completely.

As an additional experiment, I ran the engine at about 1500 RPM and pulled the secondary lead out of the coil (while properly insulating my body!!). The noise is still apparent as the engine winds down. I then restarted the engine, ran it up to 1500 RPM and this time pulled the primary leads from the coil and the noise stopped immediately. I have therefore concluded that this is indeed high voltage ignition noise and not the fuel injectors, fuel pump or some other electrical system.

I did look up the QST article and was amused that they mention that GM has a customer service department for each of its divisions, and then they didn't include addresses or phone numbers for any of them in the article!!

My letter is in the mail to the GMARC for the installation guidelines.

Several folks mentioned bonding the tailpipe to ground, so I think I will try that next if I can figure out how one grounds a tailpipe..... :-)

Thanks again for all the suggestions. If and when I figure this out, will post the solution.

Regards,

Well, Hans, I sort of see it this way: Anything that lasts a very
long time and makes a significant impact on Mankind's history deserves
to be remembered in some way; after all, it is always useful to know
where we've been as well as where we're going, if for no other reason
than to tell how far we've come.

Would you like to help us out in a long-term effort to create some
kind of historical "monument" to radiotelegraphy? If so, drop me an e-mail
and I'll add you to the electronic "mailing list." No plans yet, just
sounding out interest, and if we get something going you can participate
as much or as little as you like.

And the same goes for anyone else reading this post.

73 DE K4MSG

Paul H. Bock, Jr. (ETCM, USNR-RET)

P.S. BTW Hans, were you ever at NAVCOMMSTA Morocco? I was there in
1969-71 as a WO-1 & CWO-2 (Receivers Officer, OIC ATCU-10, and Assistant
EMO, in that order).

The tubes that are still in use are mostly high powered transmiting tubes.
Real high power transters and FETs are just now becoming available. Tubes
usualy have a slow decline in preformance and solid state usualy fails in
a sudden release of smoke. Tubes are much more forgiving to momentart over
loads and mismatches. Tube can also be rebuilt for a fraction of their
cost.

When changeing out radio and tv facilites it is a simple cost benifit
calculation. And you want to phase it the transition so that problems
can be found and corrected. Vacuum tubes will be with us well into the
next century. There may be applications that are never replaced by
solid state deviced. A cascade photo multiplier tube is one that comes
to mind. Anoter is megavolt swtiching tubes.

There are also many places that intergrated curcits have rendered tubes
to the same place as the horse and buggy.

I'm looking for some hexadecimal thumbwheel switches for a friend. They should have positions 0-F.

Looking for about 6 of them. Gimme a mail-line if you've got some to get rid of.

:

Get the book "Passport to world band radio", it's the shortwave
bible. has reviews of LOTS of radios with prices. Any good bookstore
should have it. There are MANY radios at many different price ranges.
Also has shortwave listener's guides and LOTS of other great information!

My wife has had one for about 2 months, and she likes it very well. It
has excellent audio for such a small radio.

I received a fax today from JA1BK, the QSL Manager for the current BS7H operation. Kan requests that QSLs be sent to his home address rather than to the address in the Callbook. Send QSLs to:

Kan Mizoguchi, JA1BK
5-3 Sakuragaoka 4 Chome
Tama-City
Tokyo 206, JAPAN

I talked to Martti, OH2BH, operating as BS7H/MM at 0016 UT 12-April, on 14.195 MHz long path (over South America from California). Martti says that they will arrive in about 7 hours and will be on the air for three days. Martti says that KJ4VH and BZ1HAM, ops at BS7H, will be at the International DX Convention this month in Visalia, California. JA1BK will also be at Visalia.

I am thinking of buying a TH-22AT for my first radio and I do not want to
spend a lot.(being a student, my resources are quite limited)

Should I go for a used one or a brand new one?

I would like to have some inputs about how does the Kenwood TH-22AT behaves
in a city (big one).
Can I use it as a packet radio (not perfect but can I use it)
What about intermod.
Does it have a too sensitive sql. I have heard someone complaining to make
adjustments but I cant be sure exactly what
Can it be modified (Just to be sure)
Is it prone to have some problems (any)

Thanks

Besides, unless I miscounted, "YF" is 25 units and "WIFE" is 32, so the
saving is minimal. Abbreviations ought to be significantly shorter
than what they abbreviate...

827. MIR

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-12 00:00:00 UTC
From: ericksco@mhd.moorhead.msus.edu
Message-ID: <3mfdsh$2id@urvile.MSUS.EDU>
Source record: 248668

Can anyone tell me what the voice uplink is for contacting the MIR via 2 meters? I have been hearing them on 145.550 mhz, but wonder what the uplink frequency is.

Also, I need the address for the amateur radio club in charge of QSL's QSL cards for the Space Shuttle STS- 59.

All I have is Orange Park Amateur Radio Club somewhere in Florida.
Can anyone help me please?

Thanks
Cory (ericksco@mhd1.moorhead.msus.edu)

>
Hooray. This is the first sensible suggestion I've seen on this
violatile issue. The usuable phone bands for night time operation
simply don't have room for this crud. With 40 oblierated by our
"friends" at VOA and their pals creeping onto 75, we don't need more!
Let K1MAN and the like to their thing above 7300. Ditditditdahditdah.

Telnet to callsign.cs.buffalo.edu or 128.205.32.2 port 2000. This site works quite well. You can search by callsigns, names, cities, addresses and more. It also gives date of birth for each operator listed.

836. Re: MIR

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-12 00:00:00 UTC
From: Bob Winingham <kc5ejk@onramp.net>
Message-ID: <3mfusd$54n@news.onramp.net>
Source record: 248677

Mir is simplex 145.55 both voice and packet.
The packet computer is being worked on.

I have the list here somewhere :

QSL cards for the following missions:
STS-67 Edison Radio Amateurs Association, Michigan
STS-64 Nashua Area Radio Club, New Hampshire
STS-65 Lake County Amateur Radio Club, Indiana
From ARRL list of ARC
Lake County ARC
Lucille M Schendera N9DTG Lias
812 E 40th Place
Griffith, IN 46319
STS-59 Orange Park Amateur Radio Club, Florida
STS-60 Cowley County Amateur Radio Club, Kansas
STS-58 Connecticut DX Association, Connecticut
STS-57 Miami County Amateur Radio Club, Ohio
STS-55 IBM Amateur Radio Club/1993, Florida
STS-56 Vienna Wireless Society, Virginia

I went to the ARRl FTP and got a club list: Which I can't seen to find !
I will keep looking.

Bob KC5EJK@onramp.net

Paul H. Bock (phb@syseng1.melpar.esys.com) wrote:
: As a side note, there are AM broadcast transmitters operating at the
: 5 KW output level which are all solid-state; I would imagine that it
: is probably possible to have Class A commercial FM stations (3 KW ERP)
: which also have all solid-state transmitters, since the transmitter
: output power required would be on the order of 1500-1800 watts, depending
: on the number of bays in the antenna (i.e., the gain).

Solid state arrays are making very powerful transmitters, but they
have not yet been econimical to replace MegaWatt radar tubes. This is why
the FAA still buys tubes in large quantity, not for use in the few computers
they have that still use them. Remember, a tube that outputs hundreds of
Kilowatts RF will have a falure rate measured in hundreds of hours.

unobtainable
> objective?

There is no capture. To implement a voting system, each remote receiver
is tuned to the repeater input and relays its user traffic back to the
main site via a separate link frequency. Therefore you need a cross-band
repeater at each remote site and a link receiver for each remote site at
the main site. The outputs of all the link receivers at the main site,
plus the main receiver at the main site are fed to the voter, which then
determines which receiver, main or a remote that is receiving the best
signal, which is then connected to the repeater transmitter. All =
receivers
must be matched in frequency response and audio level for this concept
to work. To avoid the rabbit repeater syndrome, you then need a very high
power transmitter to cover the main plus remote sites, or simulcast with
multiple transmitters on the same frequency.

Well I know lots of teenagers (I teach them) and life in these parts bears little resemblance to Beverly Hills 90210. $15 can be a lot of money for kids around here. True, it's not all bleak, but in my radio club at school I can think of only a few kids with 'discretionary funds'.

Hello.

Thank you for your help.

I went to Industry Canada to ask about certificates. I was told
that I can operate a station with my Japanese certificate for a
short period of time(up to 1 year). And also told that I can have
the same privileges I used to have in Japan. So I do not have to
take exams.(^_^)

Thank you. 73

: the other way, the Internet is for everyone, but Packet is for hams, the host
: for your internet dosen't know if you are licensed or not!
: 73's de Mike VE3XLS

There is a method I have tested, with a turnaround time of about three days:

From Internet to packet:

email: gate@stat.com
Title: <any title you wish>
Message text:
packet: ws1l@ns1n.#ema.ma.usa.na

Note that the first line of the message must be as shown, using the
packet heirarchical address of the intended recipient. Your message text
begins on the second line.

Note also that you would, of course, use some address other than the one
given (mine) as an example.

The gateway is screened by a human being with an amateur radio license...
therefore only amateur-type traffic will be passed (this also explains
the 3-day turnaround.)

Finally, I have tried this a few times in the past month, and it works!

>* UniQWK v3.3a* The Solution for Multilingual Messages

Robert,

I've looked high and low for these connectors. The closest
I've come is in the junk yard -- some vehicles use similar
connectors under the hood. However, I'm not satisfied with
this solution since the spade connectors cannot be easily
removed from the plastic casing. Basically, I broke down
and spent the $15 to get the 'official' power cord.

BTW if you do find a supplier for these connectors, I would
certainly appreciate you replying to me with this source.

Good luck and 73

ARLB038 4 ordered for FCC retests

ZCZC AG05
QST de W1AW
ARRL Bulletin 38 ARLB038
From ARRL Headquarters
Newington CT April 12, 1995
To all radio amateurs

SB QST ARL ARLB038
ARLB038 4 ordered for FCC retests

4 ordered for FCC retests

Four amateur licensees have been ordered by the Federal Communications Commission to be retested on suspect examinations.

The four took volunteer examination elements in Quapaw, Oklahoma, at two sessions in February and March, 1994. The ARRL/Volunteer Examiner Coordinator subsequently uncovered, in routine checking, apparent irregularities at the two sessions and reported them to the FCC.

On December 14, 1994, the ARRL/VEC suspended the accreditation of three volunteer examiners who were present at the two sessions.

The FCC ordered the four to retake, within 60 days, all exam elements that they passed at the sessions. As is standard procedure, they must retake the exams at sessions coordinated by a volunteer examiner coordinator other than the ARRL/VEC, and no volunteer examiner present at the earlier sessions may administer the reexaminations.

The license classes and call signs of the four amateurs will be adjusted according to the results of their reexaminations.

As a suggestion, check HRO prices vs other distributors, before you buy from HRO. HRO tends to charge more than others, at least as far as I've observed.

ARLX016 WRTC rescheduled for 1996

WRTC rescheduled for 1996

The second World Radiosport Team Championship has been rescheduled. WRTC-95, planned for July 1995, has been rescheduled for July 1996.

Organizers of the Washington, DC event said that WRTC-96 will be held the second weekend of July 1996, in conjunction with the IARU HF World Championship.

The WRTC committee said that the major reason for the postponement was to give financial sponsors more time to publicize their participation well in advance of the event.

The committee also has decided to change from 50 two-person teams to 30. The time frame for qualifying contest scores for applicants will be expanded from five to six years, to include results published from 1990 to 1995.

Questions and comments may be directed to WRTC Publicity Chairman Bill Hider, N3RR, or to WRTC Co-chairman Eric Scace, K3NA.

A preliminary story about WRTC-95 was in October 1994 QST, on page 84.

Ive worked several stations that had the Butternut Butterfly and
all were very happy with the antenna and its performance. The
nice thing about the Butterfly is that it can be rotated by using
a Radio Shack TV Antenna Rotor where as the large beams need a
very expensive power rotor. The other nice thing with the Butterfly
is the size. It can be worked on/installed easily.

You need the UT-50 subtone unit.

I have a 3SAT, the 220Mhz version with the UT-50 installed.

There is a mailing list called ham-uwave. Have not seem any traffic on it in
quite a while though. Send your request to "ham-uwave-request@ucsd.edu". You
should include "add your-internet-address ham-uwave" in the message.

I don't know if you will really find a good waterproof unit, however I
might suggest what I do when I go sailing..... Most big boating suppliers
handle HT type xcvrs for ship-to-shore communications. Last time I visited
a shop in the San Francisco Bay Area they were selling Icoms. Very
similar in size to the HT's hams use. For these HT's they sold a clear
vinyl pouch sort of like a heavy duty ziplock plastic bag, custom fit to
accept the ducky antenna. Obviously, one can push buttons, transmit,rcv
thru the 'baggy'. They are very effective for this type of use......

If you need more specific help, I could try to find a bay area phone book
and get you a phone number.

Gee, you Certified Flight Instructors sure make me nervous about all
those little airplanes flying around. Maybe the airlines are right
and we should get them out of the sky so that its safer. If they're
not talking on ham radios then they are probably talking to the
airport or traffic control and not paying attention to keeping the
wings level.
I remember when I asked an old guy out at the flying field which was
the safest airplane. "The safest airplane?", he said, "The safest
airplane is an airplane that's on the ground!".

The FAA has ALREADY invested almost $8,000,000,000 to replace has
nothing, nada, zip, to show for it.

Last week the FAA announced that air service to the Wash-Boston-NY
area was going to be curtailed due to personal shortages. Why are
there personal shortages? Because they've been hiring for an automated
system that they can't deliver, so there are stuck with manual system
which is too expensive to man (er "person") and maintain.

The FT-530 is one of the all time favorites. The DJ-580 is good too
but most folks like the Yaesu. If you are satisfied with a single band
radio, get the HTX-202, which has much better performance on 2m than
either of the dual bands. I don't have any experience with the HTX-404
but would imagine it is of similar outstanding performance. The
HTX-202 is on sale now for $189.

You're not the only one seeing the problem. Starting around the
beginning of the year, I stopped getting articles from the DX
reflector. I have tried to re-subscribe on several occasions,
but nothing ever happens. And so it goes...

It's definitely not the cheapest but if you want a good antenna and a company that will back it up, consider the Larsen KG2/70. I have one on my Astro van and am very happy with it. As for support, I managed to get the loading coil on it caught in the spruce tree beside my drive last weekend and popped the antenna off the glass. Larsen is sending me a remount kit free.

Source record: 248713
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

* Effective - December 20, 1994, prospective licensees and upgraders can call the FCC at 1-800-322-1117 to learn whether or not their pending FCC Form 610 license application has been processed, and if a new license has been granted. If a new license has been granted, the person can begin immediate on-the-air operation (using their FCC-issued call sign) with the privileges of the new license as indicated by the FCC (during the telephone inquiry). The hardcopy (printed) license would follow shortly after the license grant is indicated in the FCC Amateur Service data base.

* News Flash * Effective December 1, 1994, FCC began accepting Form 610 data electronically from the ARRL, W5YI and Sunnyvale VECs. Four more VECs should also be doing so shortly.

If your test was coordinated through the ARRL/VEC, license turnaround time will be approximately 23-26 days. This includes 5 days between the VE team and the VEC; 1-2 days at the VEC (in some cases the same day); and 16-19 days at the FCC.

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

The following test session information is provided by the ARRL/VEC for the upcoming eight to twelve week period. For further information, please contact the test session CONTACT PERSON at the telephone number provided. If necessary, you may contact the ARRL/VEC at 203-666-1541 x282 for additional information. Electronic mail may be forwarded to the ARRL/VEC via USENET at "bjahnke@arrl.org" or via MCI Mail to MCI ID: 653-2312 or 215-5052.

Although the test session information presented here does not indicate whether walk-ins are accepted or not, most test sessions do allow walk-ins. We encourage you, however, to always contact the CONTACT PERSON at the telephone number provided so that the VE Team is aware that you be attending the test session.

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or how to locate Amateur Radio clubs, instructors, licensing classes and/or Novice examiners in your area; please contact the ARRL Educational Activities Department (EAD) at 203-666-1541 x219. The EAD can also provide information on

recommended study materials. Electronic mail may be forwarded
to the ARRL EAD via USENET at "rwhite@arrl.org" or via MCI Mail to
MCI ID: 215-5052.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC
which is coordinating this examination. This single-character
designator denotes the VEC as defined below. An "A" (for example)
indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not
find any examinations listed for your area, you may contact
any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 203-666-1541
The 1995 test fee is $5.90.

X = Anchorage ARC, 2628 Turnagain Parkway, Anchorage, AK 99517;
(d) 907-786-8121, (n) 907-243-2221 (or) 907-276-5121
(or) 907-274-5546

C = Central Alabama VEC, 1215 Dale Dr SE, Huntsville, AL 35801;
205-536-3904

N = Charlotte VEC, 227 Bennett Ln, Charlotte, NC 28213;
704-596-2168

D = Great Lakes ARC VEC Inc., 3040 Harrison St, Glenview, IL 60025;
708-486-8019

E = Golden Empire ARS, PO Box 508, Chico, CA 95927; No phone.

G = Greater Los Angeles ARG, 9737 Noble Ave, Sepulveda, CA 91343;
818-892-2068, 805-822-1473.

J = Jefferson ARC, PO Box 24368, New Orleans, LA 70184-4368;
504-737-2315.

K = Koolau ARC, 45-529 Nakuluai St, Kaneohe, HI 96744;
808-235-4132

L = Laurel ARC Inc., PO Box 3039, Laurel, MD 20709-0039;
(d) 301-572-5124, 301-317-7819, (n) 301-588-3924

M = The Milwaukee RAC Inc., 1737 N 116th St, Wauwatosa, WI 53226;
414-774-6999.

H = Mountain ARC, PO Box 10, Burlington, WV 26710; 304-289-3576,
301-724-0674

P = PHD ARA Inc., PO Box 11, Liberty, MO 64068; 816-781-7313

R = Sandarc-VEC, PO Box 2446, La Mesa, CA 91943-2446; 619-465-3926

S = Sunnyvale VEC ARC, PO Box 60307, Sunnyvale, CA 94088-0307;
408-255-9000

T = Triad Emergency ARC, 3504 Stonehurst Pl, High Point, NC 27265;
919-841-7576

W = Western Carolinas ARS VEC, 5833 Clinton Hwy - Suite 203,
Knoxville, TN 37912-2500; 615-688-7771.
The 1995 test fee is $5.90.

5 = W5YI-VEC, PO Box 565101, Dallas, TX 75356-5101; 817-461-6443
The 1995 test fee is $5.90.

873. Examination Opportunities Scheduled 4/12/95 to 6/5/95

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-12 00:00:00 UTC
From: "Jahnke, Bart, KB9NM" <bjahnke@arrl.org>
Message-ID: <2F8C31E8@arrl.org>
Source record: 248714
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

[[EXAMNT4.12 : 4130 in EXAMNT4.12]]

* Effective - December 20, 1994, prospective licensees and upgraders can call the FCC at 1-800-322-1117 to learn whether or not their pending FCC Form 610 license application has been processed, and if a new license has been granted. If a new license has been granted, the person can begin immediate on-the-air operation (using their FCC-issued call sign) with the privileges of the new license as indicated by the FCC (during the telephone inquiry). The hardcopy (printed) license would follow shortly after the license grant is indicated in the FCC Amateur Service data base.

* News Flash * Effective December 1, 1994, FCC began accepting Form 610 data electronically from the ARRL, W5YI and Sunnyvale VECs. Four more VECs should also be doing so shortly.

If your test was coordinated through the ARRL/VEC, license turnaround time will be approximately 23-26 days. This includes 5 days between the VE team and the VEC; 1-2 days at the VEC (in some cases the same day); and 16-19 days at the FCC.

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

The following test session information is provided by the ARRL/VEC for the upcoming eight to twelve week period. For further information, please contact the test session CONTACT PERSON at the telephone number provided. If necessary, you may contact the ARRL/VEC at 203-666-1541 x282 for additional information. Electronic mail may be forwarded to the ARRL/VEC via USENET at "bjahnke@arrl.org" or via MCI Mail to MCI ID: 653-2312 or 215-5052.

Although the test session information presented here does not indicate whether walk-ins are accepted or not, most test sessions do allow walk-ins. We encourage you, however, to always contact the CONTACT PERSON at the telephone number provided so that the VE Team is aware that you be attending the test session.

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or how to locate Amateur Radio clubs, instructors, licensing classes and/or Novice examiners in your area; please contact

the ARRL Educational Activities Department (EAD) at 203-666-
1541 x219. The EAD can also provide information on
recommended study materials. Electronic mail may be forwarded
to the ARRL EAD via USENET at "rwhite@arrl.org" or via MCI Mail to
MCI ID: 215-5052.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,,Contact Phone,Contact Person

Hi. I have had an offer on some of my equipment I have for sale; the guy wants to trade me a Kenwood TM-251A.

The radio sounds great from his descriptions, and I don't doubt him any, but I'm looking for other opinions on this radio. What do you other 251A users out there think of your radios?

Thanks,
Chris. (1:229/15, ->crs, or Internet: chris.smart@canrem.com)

I don't think he's a cynic at all. It's TOO much of a coincindence that
Fred talks about mail newsletters, code tapes and code software in his
petition - ALL OF WHICH HE SELLS THROUGH HIS W5YI GROUP! I think that
K1MAN is just an excuse for him to get at the ARRL and make more money,
both at the same time. What else to expect from the same guy who wanted
to charge people $5 to mail their license applications to the FCC?

First let me say I do not know W5YI or have bought any of his materials. Also I do not know KO4TA. I do not hangout on 3975 or anywhere on 75 meters. I am a member of the ARRL.

I believe that some of you are really not looking at the big picture in this matter. It does seem the W5YI and KO4TA might have some personal reasons for stiring all this up. I do not believe it to be an attack on the ARRL. Nobody can question the good the ARRL has done for amateur radio. As far as K1MAN goes that is up in the air. I really do not feel that this is what we should look at.

Under current rules, if I understand right, K1MAN is operating legally under FCC guidelines. I have listened to his operation on 3795. It does not matter what is going on when it is time for him to transmit. He just fires up and starts. If this is OK by the FCC then lets look at it this way.

The freq, time, net, or just a qso, does not matter. I get mad at someone in one of the above situations. So what do I do, I start playing a tape that benefits amateur radio. I basically QRM the freq. legally. You say well what happens on 3975 does not affect you and you are right, but next week someone may decide to use the freq you use for a broadcast freq. How would DX'ers like for someone to transmit bulletins on top of the Family Hour all day. Or maybe on East Cars, Collins Trader Net, or even the Traders Net. If I understand the rules I could knock out any of these with a one way broadcast as long as it benefits amateur radio.

This matter is more serious than what I think the amateur community is taking it. I do not want to see the ARRL Bulletins taken off the air but I also do not want people to come on the freq. I have been using for a hour and just start broadcasting. I hope this brings to light the side of this situation I see. In a time when QRM is a problem already I do not think we need to make it legal.

Thank you for taking time to read this. Feel free to email me or respond here to anything I have said. I will say again that I might misunderstand the rules of the FCC on this but that is the way K1MAN does now because I have heard it myself.

: thought I'd just post a piece about one of his "neighbors", Wayne WZ0Z
: who drives an 18 wheeler from Omaha to Chicago on a regular basis.
: Wayne, as far as I know, isn't on internet, but I do enjoy working him cw
: mobile from his tractor. Although I work a lot of cw mobile stations, I
: think he's the only trucker I've found in that category.
Garry(kb0kuz):Humm ok thanks, have not heard him,..I usually run more SE,
to Tex. , La, Ga, ..I used to do alot of cw from the truck, especially
while I was still a novice, don't much any more tho..but I did meet
some others "Lou" kc4nru , "allan" ka4dxp , there was another I met
that did nothing but CW and I forgot his call,name..last I heard tho
he had retired...
Surpriseingly there are a few that run amtor/pactor , includeing me,
useing aplinks, and also keeping my home station on gives a good
"free" way to stay linked with home ...Internet is ok,
but most truck stops are not really set up to have a modem plugged
in to theyer public phones. But I have found a few...
Ham Radio.. dose not require any truck stop or phone..ect..
I use the gate ways alot, to send stuff to my wife, she then
gets it on e-mail.. I used to use hf packet alot, but it is too slow.
However all the fancy computer stuff can't really be done safely
while driveing, it can be done..but..
CW is pretty easy, to have a clipboard strapped to your leg,
I have the key on it, and a small pad, it is not much different
then holding the "mike" with one hand.. i don't try to write every
thing. just the name and call..this comes in handy on voice too..

Date: 8 Apr 1995 23:38:44 GMT
From: rickmcm@delphi.com (Rick McMillion)
Subject: 219 to 220 Mhz Packet

Has anyone been keeping up with the latest FCC rulemaking that gives 219 to 220 Mhz to amateur radio for 100 Khz bandwidth high speed packet link channels?

At first glance, this appeared to me to be a terrific windfall for amateur radio, and especially for the packet folks,

I do not currently operate packet, and have not been on packet for several years. One of the reasons that I got off of packet is because that here in Northern California, packet is going nowhere. We are still stuck with 1200 baud BBS's, 1200 baud backbones for the BBS's, and 1200 baud keyboard channels. We have lots of high level NET/ROM-THE/NET nodes on hill tops all talking to each other on channel at 1200 baud, and creating a real nightmare for the user trying to connect to one and send just one packet frame to the town that is 50 miles away, it is near impossible.

With the exception of improvements in packet BBS software, I have not seen any advancement in packet operations in Northern California for the last 10 years or more.

The FCC recently decided to give 219 to 220 Mhz to amateur packet. I was really hoping that the local packet folks would take this opportunity and start planning for some high speed backbone channels, or node linking channels. Unfortunately, I have not heard them even mention it.

Anyway, at first glance, I thought this was a real good deal for amateur radio. However, I just received a FAX of a copy of a FCC license for Pacific Gas and Electric, the local gas and electric monopoly through out Northern California. Their license shows that they are already licensed for 160 units in the 216 to 220 Mhz band. A closer look at their license shows that they are licensed for 40 units in the 219 Mhz band. They have a license for channels every 50 Khz from 219.050 to 219.500.

This may or may not present a problem for amateur packet. The way I read it, amateur radio will be fixed point to point operations, and the PG&E license is for mobile operation only. I gather from reading this, that PG&E will be secondary to amateur radio which will be secondary to government and marine locating services.

The PG&E license has an emission designator of 20K0F9W. Can someone decipher that for me? I believe that it is for mobile telemetering data, if I read FCC part 90 correctly.

The PG&E license shows that they are licensed for 160 mobile units. It also shows that they have a control point at 245 Market St. in San Francisco. Does this mean that the control point can turn those mobile units on and off?

I keep reading about high speed packet in other parts of the country. Is this really taking place. I thought I read about 56 Kbaud backbones and 9600 baud BBS's in Georgia recently. Is this true? Is there any high speed packet in

your area. I keep asking the local packet folks why we don't have any high speed packet planned for
this area, but they seem to think it does not exist. What is happening in your area?

Just thought that some of you packet types might like to know about the new packet spectrum before you start planning your packet operations there.

Subject: DX reflector OK?

Hello to all,

I tried several times to subscribe to the internet DX reflector.
Of course I sent my subscription request to dx-request@unbc.edu
but nothing happens!! The funny thing is that I do seem to be able
to post messages to the DX reflector (because people send me mail
regarding the message I put on the reflector) but I don't seem
to get on the mailing list myself! So I'm beginning to wonder if
the DX reflector is having problems itself. I sent a message
to Lyndon VE7TCP about it but I cannot reach him ('host unknown').

I subscribed to cq-contest@ and VHF@ without any problems.
What could be the problem? Can anyone help?

My wife has had one for about 2 months, and she likes it very well. It
has excellent audio for such a small radio.

Subject: Seattle picks up Ham Radio & More Show

The nationally syndicated Ham Radio & More Show is now on in the Seattle area.
Radio station, KRKO, 1380am, in Everett has picked up the show. Thanks go out
to Program Director, Andy. The show airs each Sunday at 3:00pm local time. Tune
in and call in to be on the show. Also, call Andy at 206-353-1380 and tell him
thanks for airing the show. Spread the word in Washington.....

Solid state arrays are making very powerful transmitters, but they
have not yet been econimical to replace MegaWatt radar tubes. This is why
the FAA still buys tubes in large quantity, not for use in the few computers
they have that still use them. Remember, a tube that outputs hundreds of
Kilowatts RF will have a falure rate measured in hundreds of hours.

From: rickmcm@delphi.com (Rick McMillion)
Subject: 219 to 220 Mhz Packet

Has anyone been keeping up with the latest FCC rulemaking that gives 219 to
220 Mhz to amateur radio for 100 Khz bandwidth high speed packet link
channels?

At first glance, this appeared to me to be a terrific windfall for amateur
radio, and especially for the packet folks,

I do not currently operate packet, and have not been on packet for several
years. One of the reasons that I got off of packet is because that here in
Northern California, packet is going nowhere. We are still stuck with 1200
baud BBS's, 1200 baud backbones for the BBS's, and 1200 baud keyboard
channels. We have lots of high level NET/ROM-THE/NET nodes on hill tops all
talking to each other on channel at 1200 baud, and creating a real nightmare
for the user trying to connect to one and send just one packet frame to the
town that is 50 miles away, it is near impossible.

With the exception of improvements in packet BBS software, I have not seen any
advancement in packet operations in Northern California for the last 10
years or more.

The FCC recently decided to give 219 to 220 Mhz to amateur packet. I was
really hoping that the local packet folks would take this opportunity and
start planning for some high speed backbone channels, or node linking
channels. Unfortunately, I have not heard them even mention it.

Anyway, at first glance, I thought this was a real good deal for amateur
radio. However, I just received a FAX of a copy of a FCC license for Pacific
Gas and Electric, the local gas and electric monopoly through out Northern
California. Their license shows that they are already licensed for 160 units
in the 216 to 220 Mhz band. A closer look at their license shows that they
are licensed for 40 units in the 219 Mhz band. They have a license for
channels every 50 Khz from 219.050 to 219.500.

This may or may not present a problem for amateur packet. The way I read it,
amateur radio will be fixed point to point operations, and the PG&E license is

for mobile operation only. I gather from reading this, that PG&E will be secondary to amateur radio which will be secondary to government and marine locating services.

The PG&E license has an emission designator of 20K0F9W. Can someone decipher that for me? I believe that it is for mobile telemetering data, if I read FCC part 90 correctly.

The PG&E license shows that they are licensed for 160 mobile units. It also shows that they have a control point at 245 Market St. in San Francisco. Does this mean that the control point can turn those mobile units on and off?

I keep reading about high speed packet in other parts of the country. Is this really taking place. I thought I read about 56 Kbaud backbones and 9600 baud BBS's in Georgia recently. Is this true? Is there any high speed packet in your area. I keep asking the local packet folks why we don't have any high speed packet planned for
this area, but they seem to think it does not exist. What is happening in your area?

Just thought that some of you packet types might like to know about the new packet spectrum before you start planning your packet operations there.

Subject: DX reflector OK?

Hello to all,

I tried several times to subscribe to the internet DX reflector.
Of course I sent my subscription request to dx-request@unbc.edu
but nothing happens!! The funny thing is that I do seem to be able
to post messages to the DX reflector (because people send me mail
regarding the message I put on the reflector) but I don't seem
to get on the mailing list myself! So I'm beginning to wonder if
the DX reflector is having problems itself. I sent a message
to Lyndon VE7TCP about it but I cannot reach him ('host unknown').

I subscribed to cq-contest@ and VHF@ without any problems.
What could be the problem? Can anyone help?

My wife has had one for about 2 months, and she likes it very well. It
has excellent audio for such a small radio.

Subject: Seattle picks up Ham Radio & More Show

The nationally syndicated Ham Radio & More Show is now on in the Seattle area.
Radio station, KRKO, 1380am, in Everett has picked up the show. Thanks go out
to Program Director, Andy. The show airs each Sunday at 3:00pm local time. Tune
in and call in to be on the show. Also, call Andy at 206-353-1380 and tell him
thanks for airing the show. Spread the word in Washington.....

Solid state arrays are making very powerful transmitters, but they
have not yet been econimical to replace MegaWatt radar tubes. This is why
the FAA still buys tubes in large quantity, not for use in the few computers
they have that still use them. Remember, a tube that outputs hundreds of
Kilowatts RF will have a falure rate measured in hundreds of hours.

From: rickmcm@delphi.com (Rick McMillion)
Subject: 219 to 220 Mhz Packet

Has anyone been keeping up with the latest FCC rulemaking that gives 219 to
220 Mhz to amateur radio for 100 Khz bandwidth high speed packet link
channels?

At first glance, this appeared to me to be a terrific windfall for amateur
radio, and especially for the packet folks,

I do not currently operate packet, and have not been on packet for several
years. One of the reasons that I got off of packet is because that here in
Northern California, packet is going nowhere. We are still stuck with 1200
baud BBS's, 1200 baud backbones for the BBS's, and 1200 baud keyboard
channels. We have lots of high level NET/ROM-THE/NET nodes on hill tops all
talking to each other on channel at 1200 baud, and creating a real nightmare
for the user trying to connect to one and send just one packet frame to the
town that is 50 miles away, it is near impossible.

With the exception of improvements in packet BBS software, I have not seen any
advancement in packet operations in Northern California for the last 10
years or more.

The FCC recently decided to give 219 to 220 Mhz to amateur packet. I was
really hoping that the local packet folks would take this opportunity and
start planning for some high speed backbone channels, or node linking
channels. Unfortunately, I have not heard them even mention it.

Anyway, at first glance, I thought this was a real good deal for amateur
radio. However, I just received a FAX of a copy of a FCC license for Pacific
Gas and Electric, the local gas and electric monopoly through out Northern
California. Their license shows that they are already licensed for 160 units
in the 216 to 220 Mhz band. A closer look at their license shows that they
are licensed for 40 units in the 219 Mhz band. They have a license for
channels every 50 Khz from 219.050 to 219.500.

This may or may not present a problem for amateur packet. The way I read it,
amateur radio will be fixed point to point operations, and the PG&E license is

for mobile operation only. I gather from reading this, that PG&E will be secondary to amateur radio which will be secondary to government and marine locating services.

The PG&E license has an emission designator of 20K0F9W. Can someone decipher that for me? I believe that it is for mobile telemetering data, if I read FCC part 90 correctly.

The PG&E license shows that they are licensed for 160 mobile units. It also shows that they have a control point at 245 Market St. in San Francisco. Does this mean that the control point can turn those mobile units on and off?

I keep reading about high speed packet in other parts of the country. Is this really taking place. I thought I read about 56 Kbaud backbones and 9600 baud BBS's in Georgia recently. Is this true? Is there any high speed packet in your area. I keep asking the local packet folks why we don't have any high speed packet planned for
this area, but they seem to think it does not exist. What is happening in your area?

Just thought that some of you packet types might like to know about the new packet spectrum before you start planning your packet operations there.

Ham Radio & More is on the Talk America Network. It is aired live every Sunday at 6:00pm EST, originating from Phoenix, Arizona. It can be heard via TVRO satellite on Spacenet 3, Transponder 9, 6.8 audio. Our toll free listener call-in line is 1-800-298-TALK. The originating station number is 1-602-241-1510 for more information. Any radio station can air the show FREE OF CHARGE.

Also, be sure to check out our WWW Home Page. It has information on upcoming shows, reviews of past shows, and even theme music. It is updated courtesy of the Boston Amateur Radio Club.
Access it at:

Subject: DX reflector OK?

Hello to all,

I tried several times to subscribe to the internet DX reflector.
Of course I sent my subscription request to dx-request@unbc.edu
but nothing happens!! The funny thing is that I do seem to be able
to post messages to the DX reflector (because people send me mail
regarding the message I put on the reflector) but I don't seem
to get on the mailing list myself! So I'm beginning to wonder if
the DX reflector is having problems itself. I sent a message
to Lyndon VE7TCP about it but I cannot reach him ('host unknown').

I subscribed to cq-contest@ and VHF@ without any problems.
What could be the problem? Can anyone help?

My wife has had one for about 2 months, and she likes it very well. It
has excellent audio for such a small radio.

Subject: Seattle picks up Ham Radio & More Show

The nationally syndicated Ham Radio & More Show is now on in the Seattle area.
Radio station, KRKO, 1380am, in Everett has picked up the show. Thanks go out
to Program Director, Andy. The show airs each Sunday at 3:00pm local time. Tune
in and call in to be on the show. Also, call Andy at 206-353-1380 and tell him
thanks for airing the show. Spread the word in Washington.....

Yes, and don't forget to change the filter at the same time.

Solid state arrays are making very powerful transmitters, but they
have not yet been econimical to replace MegaWatt radar tubes. This is why
the FAA still buys tubes in large quantity, not for use in the few computers
they have that still use them. Remember, a tube that outputs hundreds of
Kilowatts RF will have a falure rate measured in hundreds of hours.

From: rickmcm@delphi.com (Rick McMillion)
Subject: 219 to 220 Mhz Packet

Has anyone been keeping up with the latest FCC rulemaking that gives 219 to
220 Mhz to amateur radio for 100 Khz bandwidth high speed packet link
channels?

At first glance, this appeared to me to be a terrific windfall for amateur
radio, and especially for the packet folks,

I do not currently operate packet, and have not been on packet for several
years. One of the reasons that I got off of packet is because that here in
Northern California, packet is going nowhere. We are still stuck with 1200
baud BBS's, 1200 baud backbones for the BBS's, and 1200 baud keyboard
channels. We have lots of high level NET/ROM-THE/NET nodes on hill tops all
talking to each other on channel at 1200 baud, and creating a real nightmare
for the user trying to connect to one and send just one packet frame to the
town that is 50 miles away, it is near impossible.

With the exception of improvements in packet BBS software, I have not seen any
advancement in packet operations in Northern California for the last 10
years or more.

The FCC recently decided to give 219 to 220 Mhz to amateur packet. I was
really hoping that the local packet folks would take this opportunity and
start planning for some high speed backbone channels, or node linking
channels. Unfortunately, I have not heard them even mention it.

Anyway, at first glance, I thought this was a real good deal for amateur
radio. However, I just received a FAX of a copy of a FCC license for Pacific
Gas and Electric, the local gas and electric monopoly through out Northern
California. Their license shows that they are already licensed for 160 units
in the 216 to 220 Mhz band. A closer look at their license shows that they
are licensed for 40 units in the 219 Mhz band. They have a license for
channels every 50 Khz from 219.050 to 219.500.

This may or may not present a problem for amateur packet. The way I read it,
amateur radio will be fixed point to point operations, and the PG&E license is

for mobile operation only. I gather from reading this, that PG&E will be secondary to amateur radio which will be secondary to government and marine locating services.

The PG&E license has an emission designator of 20K0F9W. Can someone decipher that for me? I believe that it is for mobile telemetering data, if I read FCC part 90 correctly.

The PG&E license shows that they are licensed for 160 mobile units. It also shows that they have a control point at 245 Market St. in San Francisco. Does this mean that the control point can turn those mobile units on and off?

I keep reading about high speed packet in other parts of the country. Is this really taking place. I thought I read about 56 Kbaud backbones and 9600 baud BBS's in Georgia recently. Is this true? Is there any high speed packet in your area. I keep asking the local packet folks why we don't have any high speed packet planned for
this area, but they seem to think it does not exist. What is happening in your area?

Just thought that some of you packet types might like to know about the new packet spectrum before you start planning your packet operations there.

Subject: DX reflector OK?

Hello to all,

I tried several times to subscribe to the internet DX reflector.
Of course I sent my subscription request to dx-request@unbc.edu
but nothing happens!! The funny thing is that I do seem to be able
to post messages to the DX reflector (because people send me mail
regarding the message I put on the reflector) but I don't seem
to get on the mailing list myself! So I'm beginning to wonder if
the DX reflector is having problems itself. I sent a message
to Lyndon VE7TCP about it but I cannot reach him ('host unknown').

I subscribed to cq-contest@ and VHF@ without any problems.
What could be the problem? Can anyone help?

My wife has had one for about 2 months, and she likes it very well. It
has excellent audio for such a small radio.

Subject: Seattle picks up Ham Radio & More Show

The nationally syndicated Ham Radio & More Show is now on in the Seattle area.
Radio station, KRKO, 1380am, in Everett has picked up the show. Thanks go out
to Program Director, Andy. The show airs each Sunday at 3:00pm local time. Tune
in and call in to be on the show. Also, call Andy at 206-353-1380 and tell him
thanks for airing the show. Spread the word in Washington.....

Solid state arrays are making very powerful transmitters, but they
have not yet been econimical to replace MegaWatt radar tubes. This is why
the FAA still buys tubes in large quantity, not for use in the few computers
they have that still use them. Remember, a tube that outputs hundreds of
Kilowatts RF will have a falure rate measured in hundreds of hours.

From: rickmcm@delphi.com (Rick McMillion)
Subject: 219 to 220 Mhz Packet
```

Has anyone been keeping up with the latest FCC rulemaking that gives 219 to 220 Mhz to amateur radio for 100 Khz bandwidth high speed packet link channels?

At first glance, this appeared to me to be a terrific windfall for amateur radio, and especially for the packet folks,

I do not currently operate packet, and have not been on packet for several years. One of the reasons that I got off of packet is because that here in Northern California, packet is going nowhere. We are still stuck with 1200 baud BBS's, 1200 baud backbones for the BBS's, and 1200 baud keyboard channels. We have lots of high level NET/ROM-THE/NET nodes on hill tops all talking to each other on channel at 1200 baud, and creating a real nightmare for the user trying to connect to one and send just one packet frame to the town that is 50 miles away, it is near impossible.

With the exception of improvements in packet BBS software, I have not seen any advancement in packet operations in Northern California for the last 10 years or more.

The FCC recently decided to give 219 to 220 Mhz to amateur packet. I was really hoping that the local packet folks would take this opportunity and start planning for some high speed backbone channels, or node linking channels. Unfortunately, I have not heard them even mention it.

Anyway, at first glance, I thought this was a real good deal for amateur radio. However, I just received a FAX of a copy of a FCC license for Pacific Gas and Electric, the local gas and electric monopoly through out Northern California. Their license shows that they are already licensed for 160 units in the 216 to 220 Mhz band. A closer look at their license shows that they are licensed for 40 units in the 219 Mhz band. They have a license for channels every 50 Khz from 219.050 to 219.500.

This may or may not present a problem for amateur packet. The way I read it, amateur radio will be fixed point to point operations, and the PG&E license is for mobile operation only. I gather from reading this, that PG&E will be secondary to amateur radio which will be secondary to government and marine locating services.

The PG&E license has an emission designator of 20K0F9W. Can someone decipher that for me? I believe that it is for mobile telemetering data, if I read FCC part 90 correctly.

The PG&E license shows that they are licensed for 160 mobile units. It also shows that they have a control point at 245 Market St. in San Francisco. Does this mean that the control point can turn those mobile units on and off?

I keep reading about high speed packet in other parts of the country. Is this really taking place. I thought I read about 56 Kbaud backbones and 9600 baud BBS's in Georgia recently. Is this true? Is there any high speed packet in your area. I keep asking the local packet folks why we don't have any high speed packet planned for
this area, but they seem to think it does not exist. What is happening in your area?

Just thought that some of you packet types might like to know about the new packet spectrum before you start planning your packet operations there.

Subject: DX reflector OK?

Hello to all,

I tried several times to subscribe to the internet DX reflector.
Of course I sent my subscription request to dx-request@unbc.edu
but nothing happens!! The funny thing is that I do seem to be able
to post messages to the DX reflector (because people send me mail
regarding the message I put on the reflector) but I don't seem
to get on the mailing list myself! So I'm beginning to wonder if
the DX reflector is having problems itself. I sent a message
to Lyndon VE7TCP about it but I cannot reach him ('host unknown').

I subscribed to cq-contest@ and VHF@ without any problems.
What could be the problem? Can anyone help?

My wife has had one for about 2 months, and she likes it very well. It
has excellent audio for such a small radio.

Subject: Seattle picks up Ham Radio & More Show

The nationally syndicated Ham Radio & More Show is now on in the Seattle area.
Radio station, KRKO, 1380am, in Everett has picked up the show. Thanks go out
to Program Director, Andy. The show airs each Sunday at 3:00pm local time. Tune
in and call in to be on the show. Also, call Andy at 206-353-1380 and tell him
thanks for airing the show. Spread the word in Washington.....

Solid state arrays are making very powerful transmitters, but they
have not yet been econimical to replace MegaWatt radar tubes. This is why
the FAA still buys tubes in large quantity, not for use in the few computers
they have that still use them. Remember, a tube that outputs hundreds of
Kilowatts RF will have a falure rate measured in hundreds of hours.

zardoz@ornews.intel.com (Jim Garver) writes:

>As I recall, most if not all aircraft transponders use a TWT (Transverse
>Wave TUBE) to generate the multi-kilowatt pulse at 1090 Mhz. That would

"TWT" stands for "Traveling Wave Tube."

As a side note, there are AM broadcast transmitters operating at the
5 KW output level which are all solid-state; I would imagine that it

is probably possible to have Class A commercial FM stations (3 KW ERP)
which also have all solid-state transmitters, since the transmitter
output power required would be on the order of 1500-1800 watts, depending
on the number of bays in the antenna (i.e., the gain).

In article <54d_9504081322@woodybbs.com>, Tom.Hammond@f67.n289.z1.fidonet.org (Tom Hammond) writes:
|>
|> Does ANYONE have a TAPE of the final transmission? And, if so, is there
|> any chance of my obtaining a copy?
|>
|> 73 - Tom Hammond N0SS

Yes. I do. And I am preparing copies now for several folks who have already asked. I'm afraid I must ask you to send a 60 minute cassette or a coupla bucks because this is running into more than I expected.

I have the message which was machine sent on 5870 khz at 18 WPM. I also have the msg send by hand by Sergio Morales on 8471 khz at about 22 WPM. The key used was a Vibroplex Iambic Deluxe with his amateur call engraved on it (KP4FFW I think) and the keyer was an MFJ 407C.
The messages are slightly different. There are a few minutes of stuff from before and after the final msg on both freqs. Each side of the tape contains the recording from one frequency. Please E-mail me if your interested.

In a previous article, bob@mtdcr.att.com (14033-R.SCHREIBMAIERMT5630)1223MT) says:

>You're not the only one seeing the problem. Starting around the
>beginning of the year, I stopped getting articles from the DX
>reflector. I have tried to re-subscribe on several occasions,
>but nothing ever happens. And so it goes...
>
>73,
>Bob K2PH

I recently posted a mesdsage on the reflector. I received some replies to
it, but never saw the message I sent out. I USED to get my own message back.

It seems the relfector is in an ill state at the moment. I'm certain the
director is trying to figure out what's going on.

73,

Sean

Russ,

I don't think you will be able to work the Zia. I believe it starts around Midland, TX and goes west from there. The northernmost repeater in the Zia is around Albuquerque, I believe. We drove out to LA from Illinois last summer just after my son and I received our tickets. The best experience on the whole trip was working the Zia from El Paso to Quartzite, CA. We hit the Zia in El Paso, and Barry, N5EOV, gave us the entire list of repeater frequencies, locations, and PL tones. They are listed in the repeater directory, but you have to hunt for the entries that are indentified "Zia".

I don't know much about the Colorado Connection. although I think we briefly got into it along I-40 in NM and the TX panhandle.

What a stupid remark, given that the Democrat Administration decided
to start auctioning off frequencies LONG before the September election
when the nation showed that they preferred Newt and his cohorts over
the previous Congress critters!

>
>I am thinking of buying a TH-22AT for my first radio and I do not want to
>spend a lot.(being a student, my resources are quite limited)
>
>Should I go for a used one or a brand new one?

In a lot of cases there are people that will buy used stuff and nothing else.
Then there are people who will buy new and nothing else.
Then there are people that will do both. It depends on the type of person you are. If you don't feel comfortable don't do it, or see if a fellow Ham has any suggestions on a particular deal someone is trying to give you on a radio. I mostly buy new and have bought a couple used radios.

>I would like to have some inputs about how does the Kenwood TH-22AT behaves
>in a city (big one).

From what I have heard not too bad considering it is Kenwood.
I have the dual band version myself and don't have any trouble unless I use a super high-gain antenna on it, or unless I go into the dowtown core of a big city.

>Can I use it as a packet radio (not perfect but can I use it)

You can use ANY radio on packet...
The answer here... YES...

>What about intermod.

This is what I referred to about 12 line up about the radio in a big city.
I would recomend the FT-11R if you want a small 2 Meter Radio. The FT-11R has got an excellent exterior, and is VERY VERY well layed out, I cant say anything about good design when it comes to the TH-22AT. The display in the FT-11R is HUGE and the display in the Kenwood TH-22 is tiny. The buttons on the FT-11R are HUGE and on the TH-22 they are of OK size. The FT-11R has a illuminated keypad the TH-22 does not. The Yaesu FT-11R is more user friendly (A first for Yaesu)

>Does it have a too sensitive sql. I have heard someone complaining to make

Not that I know of. There is a possibility you may have that problem with either of the radios but that can be fixed by the user. Yaesu has a keyboard programmable 'fix' for that.

>adjustments but I cant be sure exactly what
>Can it be modified (Just to be sure)

ALL radio's can be modified.
^^^

>Is it prone to have some problems (any)

Kenwood has a fix for a 'memory loss' problem you MAY, I say MAY, have.
I think if you take the battery off without turning the radio off and
then put it back on with the radio in a certain state (on or off?) you may
loose your programmed memories. (I can't remember the way you can loose
your memory but it is something like what I said)

Don't bet on it. The sensitive, new-age guy wouldn't dream of
calling his significant other a "wife" because of the historic
"chattel" connotations, and the old-timer will no doubt keep right on
referring to his "old lady" (which is what XYL means, right?)

So, I guess you'd better start using SO instead of YF lest you
be branded an OF. ;-)

|> Thanks,
|> Chris. (1:229/15, ->crs, or Internet: chris.smart@canrem.com)
Hi Chris. I have a 251A but I only use it for packet, so I'm not
familiar with mobile use of this unit. It has no bad habits that
I have noticed. Although it is design intent, the auto power-off
is annoying. The timeout has several values that you can set it
to, including OFF, but OFF cannot be selected if you turn off the
lamp on the display. Since I use the unit for packet, I leave the
display lamp off, and if there is no activity on the frequency for
a while, the radio turns off. :-(

From: tcnic@aol.com
Message-ID: <3mjojl$7sf@newsbf02.news.aol.com>
Source record: 248605

First question:I just got a Nissan truck, the small 4 cylinder one (model 33055 what ever that is). Wonder if anyone has any experience with this vehicle or a Nissan putting 2m FM in it: problems with the on-board computer, noise from it or the possibility of damage to it from the RF.

Second Question: I run an IC-281H, max 50W. I've been looking at the "thru-glass" antennas. Know their max rating is 50W. Any problems with RF in the cab from 'em? Any one know how much RF floats around in the driver compartment from 'em. Bottom line: how well do they work?

Other questions deal with brining power in from the battery. Any ideas appreciated.

Dumbing Down
SOS for Learning (from the Editorial page- Durham,NC Herald
Sun 11 April 1995)
Getting a First Class badge in the boy scouts was made much easier
some years ago when the requirements for learning morse code was dropped.
Before that change, many a boy remained a Second Class scout for his
unwillingness to learn dots and dashes.
And now comes the news that the Coast Guard has dropped the use of
Morse code. Modern communications technology, the service says, has sent
Samuel F.B. Morse's telegraphic code the way of the Pony Express.
Maybe it's a coincidence, but these developments seem to have come as
society is dumbing down to accede to the protestations of those who can't
or won't push the envelope of learning.
Not only must Boy Scouts no longer endure the minor rigors of
learning 26 dot-and-dash letters, but most schools no longer require
students to memorize Polonius' speech to Laertes or Lincoln's Gettysburg
Address. We are left to wonder when the multiplication tables will fall
victim to those who deem rote learning unfashionable. Learning the
multiplication tables or Morse code or Hamlet's "To be or not to be"
soliloquy is not easy or pleasant. Any act of memorization is a mental
exercise, and exercise is hard work. But, like a bicep or a hamstring, a
mind can be improved with repetitious exercise.
If we drop all the hard things as learning requirements, can flabby,
undisciplined thinking be far behind ?

Yes, a phone can modify its own EPROM (usually) to emulate anothers EPROM, therefore making itself a clone of anothers phone. Many times it is possible through the phone keypad, other times it needs to be done w/ an EPROM programmer.

>Does anyone know where I can mail order one of these. I
>wish I'd have bought one at the show.

I, too, would like to know, so I can take up the issue of the manufacturer and sale of non-type accepted unlicensed transmitters with the FCC, the sole intent of which is to maliciously interfere with my lawful use of a radar detector.

915. callsign restrictions

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-13 00:00:00 UTC
From: jahern@uoknor.edu
Message-ID: <3mk73r$5dc@romulus.ucs.uoknor.edu>
Source record: 248614

I may apply for a "vanity" callsign, and I'm curious about something:
Are there certain combinations that are not allowed? For example,
can you pick a 1x2 that starts with A, like A5XX? Regardless of the
prefix letter (N, A, W, K), are there any restrictions on the 2 letters that
follow the number?

Thanks,

Jud

DX Bulletin 18 ARLD018
From ARRL Headquarters
Newington CT April 13, 1995
To all radio amateurs

SB DX ARL ARLD018
ARLD018 DX news

This week's bulletin was made possible with information provided by Rick, NE8Z, Tedd, KB8NW, the Yankee Clipper Contest Club PacketCluster network and the Contest Corral column from the pages of QST magazine. Thanks to all.

HUANG YAN DAO, AKA SCARBOROUGH REEF. BS7H is on the air from IOTA AS-116. Operators BZ1HAM, BZ1OK, KC6KOU, KJ4VH, OH0XX and OH2BH want to provide one QSO for as many stations possible rather than make multiple band/mode QSOs with fewer stations. Check 3505, 7025, 14025 and 21025 kHz CW and 3785, 7045, 14195, 21295 kHz SSB. QSL via JA1BK. A pirate was spotted on 15 meter CW prior to 0830z April 13.

TANZANIA. Eric, OH2BBF, should be arriving at Ngara April 14 to start a two month stay. He is bringing a TS-50 and hopes to obtain a license. Eric will try to make side trips to 5X, 9Q, 9U and 9X. QSL via OH2BBF after he returns home.

CENTRAL KIRIBATI. Bill, T31JK is on the air from Canton Island. He operates on 40 through 10 meters with SSB and CW, though he prefers SSB. Check 20 meter SSB around 0830z. QSL T31JK via GW0OJK, Bill's home call.

BRUNEI. V85GA sometimes operates from club station V85BG on 20 meter SSB. It has been reported that a new 160 meter antenna has been installed.

AFGHANISTAN. Oleg, YA/UT9XL, has been heard on 14120 kHz around 1445z. He should continue to be active from the Ukrainian Embassy in Kabul for 2 to 3 more months. QSL via PO Box 207 Pavlograd, 323012 Ukraine.

FRENCH POLYNESIA. Lou, LX1SP, should stay on Tahiti until April 21. Listen for his SSB on 14340 or 21400 kHz between 1800 and 2000z.

WESTERN SAHARA. Tim, KC0PA, is now signing 4U/KC0PA instead of S0/KC0PA. He has apparently obtained the appropriate approval from the UN commander and thus the call sign change. QSL via VE9RHS. S0RASD has been active on 75 and 17 meters.

MADAGASCAR. Ben, 5R8DS, has improved his 80 meter antenna. He uses an inverted L 30 meters long and 15 meters high. The ground system consists of 24 radials each 11 meters in length. He is active mornings from 0230 to 0305z on 3606 kHz. Ben requests not to call him on his frequency unless you really hear him. QSL via Ben Witvliet, Box 404, Antananarivo 101, Madagascar.

MEXICO. Rick, NE8Z, will be signing XE3/NE8Z April 14 to 24 from various sites on the Yucatan Peninsula. He will operate 160 through 10 meters with mostly CW and some SSB. QSL via K8LJG.

THIS WEEKEND ON THE RADIO. The Japan International DX Contest on CW, sponsored by Five Nine Magazine, is from 2300z April 14 to 2300z April 16. Operate 20, 15 and 10 meters only, exchanging RST and CQ Zone. Japanese stations will send signal report and prefecture number.

SARTG World Wide AmTOR Contest, sponsored by the Scandinavian Amateur Radio Teleprinter Group, runs from 0000 to 0800z and 1600 to 2400z April 15, and 0800 to 1600z April 16. Exchange signal report, name and QSO number starting with 001.

For more information on these two events, check page 123 of March QST.

> Neil KE6NCX

In order to solve some of the problems and simultaneously clear up your mind, take a very careful look back at the message that the Cal-OES speaker presented. *You are NOT a responder to the emergency, you are a manager.* Managers know the location and availability of resources and the relative priorities of the demands on those resources. They do NOT do the all (or even ANY) of the work themselves; they MANAGE the involvement of other specialists to their best advantage. They know how to get the help they need because they are aware of their surroundings. They know to whom they must COMMUNICATE their needs.

Now back to your example of the communications person in the thick of the action at a long distance walk or running event. To be an effective communicator you cannot be distracted by providing treatment for the scraped knee or a dehydrated participant. You don't have time or the authority to direct traffic. Nor can your parent organization afford the liability if you make an error, especially if you are not licensed to practice medicine or trained to control traffic.

You should always COMMUNICATE your needs and priority to the proper point for action FIRST. Advise the NCS that you need immediate professional medical attention for a runner with severe dehydration, then yell for help or have someone call 911 as a backup. Hand the band-aid box to the person with a scraped knee, or let another onlooker take care of it. Don't neglect your assigned duty of communications (for which YOU are the best qualified person) in order to do things that several others can do instead of you and better than you, and at the same time.

922. Packet Radio FAQ/Book/Info?

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-13 00:00:00 UTC
From: add@philabs.philips.com
Message-ID: <1995Apr13.152000.17699@philabs.philips.com>
Source record: 248621
Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.equipment,rec.radio.amateur.misc

Is there a FAQ or recommended book, or any literature on packet radio?
I am most interested in the protocols used, how it connects to the
Internet, what API toolkits are available, how the nodes are
connected, what wavelengths are used, what antennae are required, and
who are the popular vendors of digital radio equipment. I have heard
of AMTOR (sp?). How does that tie in with things? I guess I am trying
to understand the entire process (every detail) of how a message that
I might send to a friend halfway around the world would get there and
be retrieved by my friend. Once I understand the process, I want to
buy equipment, get a license and start playing with the setup. As is
probably evident from my questions, I am a complete novice at amateur
radio. Any help will be greatly appreciated. Thanks!

From: jeffh@ludwig.cc.uoregon.edu
Message-ID: <jeffh-1304951937240001@jeffh.cc.uoregon.edu>
Source record: 248623

I'm looking for the part description for a transistor in the DR110-T.

It's Q4 on the display board and controls 12vdc to the power switch. Of course its a SMD and pretty much destroyed itself (I helped when I removed it ;-) so I have no # to go by.

If anyone out there has any ideas I'd be mucho appreciative!!!!

Please e-mail or post, I'll make sure and lurk for the next few days.

Thanks in advance,

The real point isn't the tube at all, but the radar system used. Traveling Wave Tubes (TWTs) and Klystrons are still used in new radars, but only for the final amplifier stage. The real future of solid-state power amplifiers in radars is for active arrays, where each antenna element of a phased-array is a transmit/receive module, made of Gallium Arsenide. This technology is VERY expensive, and is limited to military radars like the new Theater High Altitude Air Defense (THAAD) system being designed by Raytheon for the army.

If FAA ATC radars are using low-frequency tubes, they must be in an old system. While I'm not very familiar with ATC radars (I work with military radars), I do know that there are many excellent ATC radars currently available that are all solid-state, save the final power stage. These radars offer superb performance and very high reliability. I suppose the problem that must be addressed is: what systems has the FAA acquired, and what do we have to show for the dollars pumped into the FAA acquisition system?

Welcome to America, Dude.

A personal favorite radio of mine has been the Sangean 803a. Ultra-
cheap and really nice performance especially when combined with nearly
any type of external antenna. About $150 should get you a new one, but
be on the look out for a used DX-440 by Realistic (Radio Shack), same
unit with a different label, seen frequently used at about $75, check the
classifieds in magazines like "Monitoring Times" (great magazine,too).

So long from Memphis, G.W.

I couldn't agree more Duffy.
Rad Shack stuff (all of it) is shit. (*Personal opinion*)
Actually I do not mind their silverish goldish alkaline batteries, I
think that is the only thing that Radio Skack puts out that is good.

I want to see Motorola put out a radio with VHF and UHF capability in a
portable.

BTW
I was wondering if you or anybody has heard anything about the IC-V68
Was it rejected for commercial use? So they are now trying to flog it
as a basic amateur radio? Seems kind of fishy... Especially since
little if no advertising was done.

If anyone out there likes any of the Radio Shack Amateur equipment out
there, I would assume they just haven't seen the light, and probably

never will unless they buy a piece of Yaesu or Alino equipment...
And once you get to that level try out a piece of Motorola equipment and
you never want anything else!

Well, That's the way I feel.

I have a feeling that this code is not the same for all cellular phones...
But I wanna know too.

Also I have heard from reliable sources that all cel phones can also be
put into a mode (tech mode) or something like that, (top secret) that the
phone will recieve any other persons phone, trunk and can even 'key up'
on or over them...

Anyone else know about this?

I guess the best thing to do is to get an ADVANCED (top secret) tech
manual for your phone that explains all this. (It is probably impossible
to get one of these manuals though.) Probably locked up in a vault!

>So, thanks for the info!

Why would you put a bag over your HT?

I got my hands on a Motorola HT-90 for $75.00 CDN and it has been submersed in water many times and still works great! In fact much better than the HTX-202 (doesn't take much) The radio puts out superior audio over any radio I have ever seen (other than the other radio's by Motorola which are as good). I do not know If all motorola radio's are waterproof but the HT-90 has certainly proved to be. The radio is only two channels and couldn't be simpler to operate (hihi) obviously, but it is fine for what I may want to do when I am in danger of getting a radio wet. Motorola also offers a speaker/mic for all their radios which I believe to be waterproof. What can go wrong anyways. I use a Motorola speaker/mic on my Kenwood TH-79A and it works great, I also used one on my FT-11R and my FT-530 when I had them.

From: ENERGY@cphillips.pdial.interpath.net
Message-ID: <3mi9kt$qd7@redstone.interpath.net>
Source record: 248728

I'm looking to purchase a new video monitor to use next to my
radio gear, and I'm interested your opinions on which brands
cause the least radio interference.

I'm going to get a 15" monitor (SVGA, non-interlaced, for use
with a 486). I have some (non-radio) friends with the CTX, and
it seems like a good monitor, but I haven't had the chance yet to
take a radio over and check them out.

Anybody here use a monitor and computer at the same time they use
their radios (particularly on the shortwave bands)? What brand
of monitor do you use? Does it cause much RFI?

All input is appreciated.

941. GB2RS News 16th April 1995

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-14 00:00:00 UTC
From: dave@llondel.demon.co.uk
Message-ID: <797877481snx@llondel.demon.co.uk>
Source record: 248483
Cross-posted to: uk.radio.amateur,rec.radio.info,rec.radio.amateur.misc

Good morning. It's Sunday the 16th of April and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

Now this week's headlines:-

Members and non-members alike are welcome to the RSGB Headquarters Open Day on Saturday the 22nd of April;

Also on the 22nd, International Marconi Day will be celebrated;

GR-prefix special event callsigns to be issued to stations commemorating the anniversary of the end of the Second World War;

The RA has agreed in principle to 50 MHz voice repeaters;

And there is an urgent message for all repeater keepers.

Next Saturday, the 22nd of April, will be the annual Open Day at RSGB Headquarters in Potters Bar, Hertfordshire. This year the Open Day coincides with International Marconi Day, and the Society will be celebrating 100 years of radio with a Marconi exhibition and a special event station, GB100IMD. In addition, there will be guided tours of the headquarters, including the museum, library, shack, QSL bureau and RadCom production offices. The RSGB HF Awards Manager will be in attendance to check QSL cards and issue awards. The Radiocommunications Agency, SSL and traders will also be there, and the Society looks forward to meeting as many members and non-members as possible. A map giving directions to the RSGB headquarters in Potters Bar is on page 9 of the April RadCom.

The Council of the Society has agreed to support the issue of the special event prefix GR in remembrance of the 50th anniversary of the cessation of hostilities. The council felt strongly that the RSGB should support the issue of these callsigns not in an act of celebration, but in remembrance of all those who lost their lives, and to commemorate the start of peace. It should be noted that GR-prefix callsigns are not a general issue; rather they are an alternative to GB callsigns for bona fide stations commemorating the 50th anniversary of the end of the Second World War. The issue of GR-prefix callsigns to groups who have already applied for GB special event callsigns to commemorate the anniversary of VE Day is under way.

The Radiocommunications Agency has agreed in principle to the establishment of 50 MHz voice repeaters in the shared portion of the band, 51 to 52 MHz. It has also agreed to consider further voice

repeater linking proposals on a case by case basis. Only repeaters in remote areas will be considered.

Now an urgent message for repeater keepers and users. The Radiocommunications Agency has stipulated that each keeper must inform the Amateur Radio Department at RSGB Headquarters each year that he wishes his Notice of Variation to remain in force for the year commencing the 1st of April. Of the 260 repeaters in the country, about 60 have not yet done so, and these run the risk of being closed down unless they respond quickly. Would repeater keepers who have not already contacted the Amateur Radio Department please telephone Mrs Fiorina Sinapi at RSGB headquarters on 01707 659015 as soon as possible. Repeater users may wish to check that the keeper of their local repeater has responded.

The Annual Convention of the Narrow Band Television Association will be held on Saturday the 22nd of April at the Department of Electronic and Electrical Engineering at Loughborough University, from 10.00 am. Non-members of the Narrow Band TV Association wishing to attend are welcome, but they must first contact Mr Douglas Pitt on 0115 928 2896.

Now news of activity from some special event stations:

The Central Lancs Amateur Radio Club, in conjunction with the Cave Rescue Organisation and the Cave Radio Electronics Group is operating special event station GB4CRO from White Scar Cave at Ingleton in North Yorkshire this weekend. The station plans be on the air from approximately 0600 to 2400 both today, and tomorrow Easter Bank Holiday Monday.

The Royal Naval Amateur Radio Society 'HMS Belfast' London Group is active as GB2RN from now until Sunday the 23rd of April on HF, VHF and UHF, using CW, phone and digital modes.

And next Saturday, the 22nd of April, around 40 special event stations will be active from around the world to celebrate International Marconi Day. In Britain, we expect 13 stations to be on the air, including GB100IMD at RSGB HQ. A full list of Marconi Day stations, and details of the award offered by the Cornish Radio Amateur Club, are on page 19 of the April RadCom.

Now some items of HF DX news from the weekly RSGB DX News Sheet which is edited by Brendan McCartney, G4DYO.

From Moorea Island in French Polynesia - FO - LX1SP will be active from today until Friday the 21st of April. His callsign may be FO/LX1SP.

From the island of Nevis {pronounced "Nee-vis"} in the Caribbean, Jim, G0IXC, plans to be active on 15, 20 and 40 metres SSB from Thursday the 20th of April until the 10th of May. He has requested the callsign V47XC.

And from Monaco, 3A100GM will be the special callsign used by the 3A-CW group to celebrate the Marconi anniversary from this Friday, the 21st of April, for one month. Operation will be on CW only and the station can be QSLd via 3A2LF.

Next the Rally News, and we know of two rallies taking place this weekend:

Today, the 16th of April, the Cambridgeshire Repeater Group amateur radio rally takes place at Philips Telecom catering centre, St Andrew's Road, Chesterton, Cambridge. The event features trade stalls and a bring and buy stand, and the doors open at 10.30 am.

And the Amateur Radio Caravan and Camping Club rally at Amerton near Stafford is taking place over the whole of the Easter holiday period.

Next Sunday, the 23rd of April, the Bury Radio Society rally will take place at the Castle Leisure Centre, Bolton Street, Bury. The doors will open at 11.00 am, with priority admission for disabled visitors. Talk-in will be on 2 metres channel S22 and further details may be obtained from G4KLT on 0161 762 9308.

The Lough Erne Amateur Radio Club mobile rally will also take place on the 23rd of April at Killyhevlin Hotel, Enniskillen. The usual traders will be present and there will be a bring and buy stand. For more details contact Fred, GI4PCY on 01365 324993.

And also on Sunday the 23rd, the Swansea amateur radio and computer show will take place at the Swansea Leisure Centre on the A4067 Swansea to Mumbles road. The event will feature a bring and buy stall, special interest groups, and the usual traders. For details contact Roger, GW4HSH on 01792 404422.

On the 29th and 30th of April, there will be an amateur radio and computer rally at the Adam Bede Trade and Exhibition Centre, Derby Road, Wirksworth, near Matlock. For details call John McLaughlin on 01629 825607.

Now for the HF contest news:

On Thursday the 20th of April, the third of five events in the RSGB Slow CW Cumulative contest will take place between 1900 and 2030 UTC. The full rules are in February's RadCom.

Next Sunday, the 23rd of April, the Low Power Fixed contest will take place between 0700 and 100 UTC. The rules are in the April RadCom.

And this weekend the Holyland Contest is taking place. The contest started at 1800 UTC yesterday and continues until 1800 UTC this evening, the 16th of April. Brief rules are on page 22 of the March RadCom.

Next some VHF contest news:

On Thursday the 20th of April, the third and final event of the 144 MHz SSB cumulative contest will take place between 2000 and 2200 local time.

The rules are in February's RadCom.

Now some beacon news:

Just in time for the sporadic-E season comes news of two new 6 metre beacons. JW7SIX on Svalbard, JQ88AD, is operating on 50.047 MHz with 10 Watts into a 4-element Yagi. The beam will be on Europe until the end of May, when it will be turned to 340 degrees for transpolar sporadic-E tests.

The other new beacon is SK3SIX in JP71XF, which is operating on 50.070 MHz with 10 Watts to crossed dipoles.

The operator of the 3.5 and 10 MHz propagation beacon DK0WCY apologises for recent problems with its geoalert warning of possible auroras. This has been due to reorganisation of the databases at Boulder which supply the information. It is hoped that the problems will soon be over and normal service resumed.

And now the solar factual data:

The period from the 3rd to the 9th of April saw solar activity at very low levels, but the geomagnetic field increased to major storm levels. Not all the data is at hand this week due to a computer breakdown in the Space Environment Laboratory in Boulder. Solar flux levels remained mostly steady for the period, and averaged 73 units. The 90-day solar flux average on the 9th was 84 units. Geomagnetic activity started at very quiet levels with the Ap index down to only 2 units on the 4th, during the morning period on the 7th activity increased rapidly with aurora reported on 2 and 6 meters during the afternoon. The daily figure for the 7th was Ap 49 units. It declined to active levels on the 8th and the 9th, with the average for the period being Ap 15 units. The aa indices as supplied by the British Geological Survey for the 28th of March to the 3rd of April started at sub storm levels, on the 28th and the 29th, 34.8 and 32.4 nanoTeslas were recorded respectively, levels then declined to unsettled and by the 3rd quiet conditions with only 4.8 nanoTeslas. The average for the period was 21.2 nanoTeslas, about K3.

I'll repeat the figures: flux-73, Ap index-15.

Now the ionospheric data for Central France.

Not all the data is at hand this week, but the F2 daytime critical frequencies at Poitiers, as reported by Meudon, for the 31st of March to the 3rd of April declined from 6.8 to 5.8MHz and averaged 6.3MHz. The darkness hour lows ranged between 2.0 and 3.3MHz and averaged 2.6MHz. The daytime highs took place between 14.00 and 19.00 hours, except for the 31st when it was at 10.00 hours. The darkness hour lows took place at 05.00 hours.

I'll repeat the figures: highs - 6.3MHz, lows - 2.6MHz.

And now the latest forecast on the sunspot minimum:

What everybody wants to know is when the next sunspot minimum will be. The last minimum, in September 1986, saw a smoothed sunspot number of 12, but the minimum at the start of cycle 19 in April 1954 was only 3. The latest forecast from Boulder is for a smoothed sunspot number of 6 in May 1996. So far cycle 22 has been full of surprises, so a minimum of only 3 cannot be ruled out which could delay the minimum until early 1997. It must be stressed that there is a 6 month time lag in smoothed monthly sunspot numbers, due to the way in which they are calculated.

At present the sun's source surface magnetic field is almost in line with the sun's equator. This will now slowly turn over to reverse the field direction for the next cycle. It will be in line with the poles by the next maximum.

And now the solar forecast:

This week the more active side of the sun will be looking our way, and solar activity is expected to increase to low levels with the outside chance of moderate levels, particularly around midweek. Geomagnetic activity is expected to be at mostly quiet levels. Ionospheric MUFs during daylight hours are expected to be about 23MHz for the south and 20MHz for the north. The darkness hour lows are expected to be about 12MHz.

Finally, the April Lyrids meteor shower is forecast between the 19th and the 25th of April, with the peak taking place on the 22nd.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Victor X-Ray and G7 Victor Quebec series, and Novice calls in the 2 0 Alpha Kilo and 2 1 Delta Victor series.

--

GB2RS is prepared by the Radio Society of Great Britain
and is broadcast in the 80m, 40m, 6m and 2m bands.

I need something high powered, fully remoteable, 2m or 2m/70cm.

This will be used as a repeater for a 2m/70cm HT.
Hopefully to hit a permanant repeater
HT -----> mobile -------> repeater

?'s: *experience with this type of setup?
*best radio?
*best radio for the money?
*can I or should I try for greater power than 50w?
I may be in remote or canyonous regions

*bonus question: If I have 2 mobile units can I...
HT -----> mobile -----> mobile ----->repeater
(and back to the HT of course)

Many thanks!!

Sorry you had some bad experiences. Everything I've ever bought from them has worked just fine - and that's a lot of stuff over the years. I use one of their HTX-202s for my packet cluster radio and it has run 16 hours a day on weekdays and continuously on weekends since January of '93. No complaints here!!

73, Bill W7LZP

Well,

Let me throw in my two cents FWIW. Anything I have bought from shit
shack has never worked for more than a few weeks before I had a problem.
The first 202 I bought started getting this ER2 displayed on the LCD and
couldn't get it to go away no matter what I did. I sent it to Tandy
(they should have stuck to leather) and they sent back "fixed". Yea right.

> prefix letter (N, A, W, K), are there any restrictions on the 2 letters that
> follow the number?
>

Let me take a crack at this one, (I am pretty familiar with A.)

(Warning US-centric post ahead: Hi there DX! but I am assuming you hit N
or D about now... CUAGN)

The short form: No go for you on A5XX (I could use it on a few bands though :-).

US calls beginning with A must have a second letter in the prefix from A
to L, as the United State does not have exclusive allocation of the entire
letter A, there must be an additional letter in the prefix, the US has
AA-AL. A5 is the prefix for Bhutan and though they do have the option of
giving out a call without an additional number in it, the bhutanese have
issued their calls in the form A5#XX such as A51PN.

No one can pick 1x1's beginning with anything in the US (A K N W)
2x3's beginning with A (not 100% sure on this)

I have attempted to put these is rough chronological order.

No one can pick calls with no letter even if you previously held it
(eg, Old timers who held 1AA or something)

As an Extra you can pick, 1x2's beginning with W K N
2x1's beginning with A where letter 2 is ABCDEFGHIJKL
2x1's beginning with K N W
2x2's beginning with A where letter 2 is ABCDEFGHIJKL

As an Advanced (or above) 2x2's beginning with K N W

As a Technician (or above) 1x3's beginning with W K N

As a Novice (or above) 2x3's beginning with W K N

Some restrictions apply (KG4-by-2s KA2-by-2s a/k/n/w-H/L-6/7 k/n/w-P-1/2/4 etc)
due to US DX locations, mostly second letter P H L)

For those students of recent net.history (89-90), there lies in some
vault, bytes and bytes of an huge dicussion involving SV/A, Abu Ail A1,
and those whole one-number two-number, JY1, 1L/, 0P8/, XE21 (from 92),
S0RASD thingy, with many many different, most complete explanations, rants

and raves.

Maybe Brian Kantor has those hidden up in the INFO-HAMS archive?
(pointer hint, hint, Brian?)

Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment,rec.radio.swap

Hello,

If you are not in driving distance from Central MA, this post
may not apply to you. Otherwise, please read.

Our club has lost our 6m transmitter site for our 6m split-site
repeater. We are having trouble finding a new site for this unit and
have decided to try to find a set of cavities for 6m to run the unit
from a single site.

If you have or know of a set of cavities - let me know. I believe we
can use most VHF low (46 MHz) commercial cavities with modification;
so if you know of a set becoming available, they will work too!

Of course, since 6m cavities are rather large, they must be within
driving distance from central MA so that we can pick them up.
Otherwise, shipping costs will be prohibitively expensive. But I
would still appreciate knowing if a set is available at a fair
distance - we may get desperate. :->

You can reply to me directly at chilton@emc.com (preferred) or call me
at home at (508) 481-0038. I am usually not home, so if you do call,
please leave a message on the machine and I'll call back ASAP.

Thanks,
(et 73)

From: brian.carling@acenet.com

Your premise is totally bogus!

FL>The freq, time, net, or just a qso, does not matter. I get mad at someone
FL>in one of the above situations. So what do I do, I start playing a tape
FL>that benefits amateur radio. I basically QRM the freq. legally. You say
FL>well what happens on 3975 does not affect you and you are right, but next
FL>week someone may decide to use the freq you use for a broadcast freq. How
FL>would DX'ers like for someone to transmit bulletins on top of the Family
FL>Hour all day. Or maybe on East Cars, Collins Trader Net, or even the
FL>Traders Net. If I understand the rules I could knock out any of these
FL>with a one way broadcast as long as it benefits amateur radio.

That is NOT what K1MAN does! He does NOT start up on top of a net!
These guys KNOW he is going to come on! His bulletin operation is
established, well-publicized and has been on basically the same set
of frequencies for years. If ANYONE is doing what you claim "might
happen", it is KO4TA and his ilk on 75m.

FL>This matter is more serious than what I think the amateur community is
FL>taking it.

Nah. Take a survey. There is just NOT an influx of new bulletin
transmissions deliberately jamming nets. You are using too much zany
imagination OM!

FL>I also do not want people to come on the freq. I have been using for a
FL>hour and just start broadcasting.

You don't have that problem though, so we shouldn't make laws to try to
stop imaginary things that MIGHT happen in the future Floyd, it just
makes zero sense to me.

FL>this situation I see. In a time when QRM is a problem already I do not
FL>think we need to make it legal.

sigh! We are NOT "making it legal." Nothing has changed.

957. HTX-202 Blues

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-14 00:00:00 UTC
From: dbasinge@nickel.ucs.indiana.edu
Message-ID: <dbasinge-1404950849300001@ds9.hper.indiana.edu>
Source record: 248499

I got my HTX-202 radio back yesterday from the shop, but it was repaired. The problem I sent it in for was never fixed. I decided to take it home and find another way to fix it, or call Tandy Service and ask if I could ship it myself. I was playing with it last night, adjusting the freqency, hoping to receive something. it squawked, beeped repeatly, and give me an Er2. I turned it off and back on, and it worked fine.

The radio works great now, hitting repeater 25+ miles away. It is of course still broken, or has a strange short, but it only has to last me till I can buy a better radio.

Also, I have misplaced my instruction book for my HTX-202 (just moved into a new house). I have forgotten how to program freqencies into memory. So I called my local Radio Shack asking if they would tell me over the phone how to do it, or allow me to photocopy that page from the book. The sales person said no, but they would order me one for $10.00.

I paid $230.00 for the radio and 5 year warrenty. you think they could give me some phone assistance.

Could someone e-mail instructions on how to program freqencies into memory, so I don't have to get rip-offed by Radio Shack again.

Thanks,
Mike

IT>In my drug-crazed not-so-humble opinion! 73/Terry VE4UC

he's got it right, at least as far as the mobile and base rigs go.
i've had my ft2500M for 3 weeks now and i can honestly say i've never
had a better experience with a mobile rig than i am having with this
one. i actually don't even need the ctcss decoder for the first time in
this rig. the san jose rf environment SUCKS, and unless you have a
commercial grade rig, not having a tone decoder is like slitting your
wrists. the front end is really tight on this baby, so no decoder
needed. and, as for the sensitivity, well, i've picked ht's out of the
mud from miles away; stuff my past 3 mobile rigs didn't have a chance of
hearing (in side by side comparisons!)

MD> If an abacus works fine for addition, why did you bother to buy a
MD> calculator?

MD> The point he was making was that 1 microchip performed the job of
MD> hundreds of vacuum tubes. And, the "microchip" probably costs less
MD> too. Yet, the government's purchasing bureaucracy doesn't let you
MD> buy the cheaper, better technology.

Right on!

As an engineer who spent 31 years in the electron tube industry
and wound up having to be re-treaded because the industry
disappeared, perhaps I should be expected to defend tubes. ;-)

But seriously, imagine a computer using tubes, as the first one
actually did. (Thousands of a miniature dual triode similar to
the 12AU7). Despite that first computer being ridiculously
crude compared to a PC, because of the great difference in
component life expectancy, it's downtime was horrendous. They
needed several full time technicians to find and replace tubes
on a daily basis. It required several KW of power, a large room
and because of the heat generated, lots of airconditioning.

That pilot, Russ, who thinks everything at FAA is fine: I'd trust a
12 volt solid state regulator thousands of hours longer than I
would a VR150 regulator tube. (BTW, that tube seldom lasted longer
than a thousand hours. At the end of life it would often flicker;
the using circuit now alternating between 150 volts and something
quite a bit higher).

962. HAM-server Information

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-14 00:00:00 UTC
From: server@GRAFex.sbay.org
Message-ID: <gate.sB1k4c1w165w@GRAFex.sbay.org>
Source record: 248504
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

Distribution: world
Subject: HAM-server information

HAM-server was devised to allow people without direct internet access a way
to get amateur radio related programs and other information. It is not
directly on the internet, so ftp and telnet is not available.

Most of the files on HAM-server are available via ftp from the various sites
around the world that archive them. That's where I got most of them.

In addition to DOS files, there are some Mac ,Linux, and OS/2 files available.
I'm always on the look out for more (particularly Mac, Linux, OS/2).
See below.

General Information:
==========

There is a daily limit of ALL requests of 3-megs. There is an individual
limit of 1.2-megs. If there are a series of files you want to order,
stretch them out over a few days, rather than ordering all at once.
That way, you are almost assured of getting them all, and you won't be
blocking others from getting their orders filled.

ASCII (text) files are split at about 59,000 bytes. UUENCODED binary files
are split at about 750 lines.

A new INDEX is automatically generated every Sunday.

Ordering Information:
==========

Send an email to:

HAM-server@GRAFex.sbay.org

In the text of the message, place:

HELP
GET /hamradio/INDEX.TXT
QUIT

HELP will send you the HAM-server HELP file. This is processed immediately
for return delivery.

o DOS

If you are using a PC and you do not have UUDECODE, order
UUDECODE.BAS or UUDECODE.C and UUEXE536.EXE. Compile on your

system then uudecode UUEXE536.EXE. This is a self-extracting archive of UUENCODE and UUDECODE, with documentation. This will work for DOS and OS/2.

o OS/2

I highly reccomend UNZ512X2.EXE. This is InfoZip's ZIP and UNZIP (plus other stuff). Will dearchive PKUNZIPped files, as well as UNIX zipped files.

o Macintosh

Most Mac programs are stored in binhex (.HQX). You will need a utility, such as StuffIt to decode. There are also UUDECODErs and other de-archivers available. See the index for /hamradio/macstuff/utility.

o Linux

Use UNZIP.

Some Reasons Why Ordered Files Are Not Received:
==========

o If you are ordering from a ccmail system, be advised that ccmail in its default configuration attempts to automatically UUDECODE files. If your order is sent in parts, it will hiccup after the first part. See your system administrator.

o Your return path is incorrect. My bounce mailbox fills up quite regularly with messages. And, since the path is incorrect, I cannot contact you to let you know. Try the PING command to check that the path is open.

o You have spelled the file name incorrectly. Check the INDEX.

o You have entered your request incorrectly. Check the HELP file for correct syntax.

o The file name has changed since the INDEX was generated. Order a new INDEX. See the HELP file for the NEWFILES command.

o You sent your order to me personally or in reply to this post. Orders are only honored when sent to HAM-server@grafex.sbay.org. That's the way the software works.

YOUR HELP IS NEEDED:
==========

If you have a program you would like placed on HAM-server, you can email it uuencoded (DOS, Linux, and OS/2) or binhexed (Mac) to

incoming@grafex.sbay.org

This email address is set up to flag me that there is something new that I need to take care of quickly.

963. Frequencies in Switzerland?

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-14 00:00:00 UTC
From: "Roy P. Massena" <rpm@iea.com>
Message-ID: <3mla0u$ref@krel.iea.com>
Source record: 248505

If you could direct me to sources of information for the following items I would greatly appreciate it.

I will be climbing peaks around Zermatt and Saas-Fee Switzerland again this fall and would like to provide communication for my party using amateur radio.

1) Are 144MHz or 440MHz available for amateur use in Switzerland?

2) How do you obtain reciprocal license privileges?

Thank you.

>
>I'm sure you meant to say ``... to maliciously interfere with my
>unlawful speeding.''

No, I don't think I meant to say that. I'm usually pretty good at typing
what I am thinking. Maybe I do speed. Does that somehow make the use
of an illegal transmitter OK? Maybe it does, in your opinion. I guess
two wrongs *can* make a right, is that it?

If that's the case, then maybe people who want to play Highway Patrol
should get an unlicensed VHF transmitter for 159.000 MHz so when they see
me blow by them on the PA Turnpike, they can alert the police directly?
I'm sure both the FCC and PASP would go along with that.

Bulletin n° 009
Villanova d'Asti 14.apr.1995

Hi,
this bulletin contains a New Info about EU-166 that at the end of april will be actived by Sicilian operators (IT9YRE, IT9HLR and others), a brief info about IOTA, and a section with QSL manager for the lasts Island operations.

What are the IOTA meeting frequency?

The main frequency is 14.260 MHz, used by IOTA nets around the world. Other ones on SSB are 28.560, 28.460, 24.950, 21.260, 18.128, 7.055 and 3.755 MHz.
The CW frequencies are 28.040, 24.920, 21.040, 18.098, 14.040, 10.115, and 3.530 MHz. On 40m is recommended that operations should include a frequency above 7.025 MHz, when the band is open to North America.

971. Cellular Phone Code..

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-14 00:00:00 UTC
From: Wayne_Estes@csg.mot.com
Message-ID: <9504141257.ZM3839@SALCIUS2>
Source record: 248513

All cellular phones can be put into "Test Mode" in order to manually control various functions of the phone for diagnostic purposes:

Set channel number
Set transmit power
Enable/disable transmit carrier
Mute/Unmute receiver audio
Must/unmute transmit audio
Enable/disable DTMF tones
Enable/disable SAT tones
etc.

I don't know of any phones that can be used as a "scanner" in test mode. You might as well use a (pre April 1994) scanner to do that.

The procedure to enter test mode, and the keystrokes for test mode commands vary from one manufacturer to another.

Virtually all computerized gadgets have some kind of diagnostic test mode - CD players, ham transceivers, stereo receivers, you name it. The procedure is not necessarily "top secret". Often all you need to do is order the service manual to get the test mode information.

From: Wayne_Estes@csg.mot.com
Message-ID: <9504141310.ZM3911@SALCIUS2>
Source record: 248514

I would like to hear from anyone who has used the optional 30m resonator on a Butternut HF2V vertical.

Does it seem to degrade the efficiency on 40 or 80 meters?

What does the added 75 Ohm coax do to the impedance on 40 and 80?

How much is the 40m bandwidth reduced when you have a good radial system?

The 30m resonator kit seems like an expensive kluge. Is it worth it?

The problem is that a cutover between the old system and the new system is a VERY risky adventure.

How many of us have seen days of strange bugs when a system in the office is cut over? This can be funny when the results are not that critical, but when a strange bug means 100 people on an airplane die it is not funny.

>meters. I am a member of the ARRL.

First I'll say that I am not a member of ARRL and there are
some reasons for that but I won't waste this posting on that issue.
Suffice it to say that I feel ARRL is a bit out of touch with
reality......and leave it at that.

>I believe that some of you are really not looking at the big picture in
>this matter. It does seem the W5YI and KO4TA might have some personal
>reasons for stiring all this up. I do not believe it to be an attack on

Yeah, it sounds to me like cold, hard CASH. I don't think you
have to be fellini to figure out that if they want the W1AW transmissions
to stop while they're busy trying to sell code tapes and upgrade materials,
that they have a *FINANCIAL* interest in this.

IMHO, while there's nothing wrong with selling products and/or
services to the Amateur Radio community, I have a SERIOUS problem with
them wanting to legislate W1AW off the air - this sounds like a
blatant attempt to monopolize the "code assistance" product to me.

And I don't see ARRL badmouthing other people's ham books/materials....

>the ARRL. Nobody can question the good the ARRL has done for amateur

Well, I have no love lost for the ARRL - however, I will be
the first to not only admit that ARRL provides many valuable benefits
and publications to Amateur Radio, I'd even say that I highly reccomend
their books and other publications as being well written and well
done. These services go above and BEYOND anything that has to do
strictly with their regular members, and I applaud such efforts.

>Under current rules, if I understand right, K1MAN is operating legally
>under FCC guidelines. I have listened to his operation on 3795. It does
>not matter what is going on when it is time for him to transmit. He just
>fires up and starts. If this is OK by the FCC then lets look at it this
>way.

That sounds like a case in which the FCC might be just looking the
other way.

I think it would be rude, arrogant and highly presumptuous for
ANY net or other similar operation to simply start transmitting without
at least making SOME attempt to determine if anyone was using the

frequency. Many times I have heard a net control station break into
a QSO in a gentlemanly fashion and politely ask the QSO to move off
5 or 10 KHz, as it is easier to move a 2-station QSO than a whole net.

Operations that are regular nets, or special events stations
that have been published well in advance should, I think, still observe
such procedures if for NO other reason than to continue and foster
the sort of gentlemenly conduct that many hams seem to have
unfortunately forgotten these days.

Now granted, propagation does not always allow one to hear
a response to the question "is the frequency in use?" - I think we
all need to take that into consideration in our own operating procedures.
Just speaking as ONE ham, if I make this call a couple times on a
given frequency and hear no response, I will start calling CQ. It
has happened more than once that some fluke of propagation has
prevented me from hearing a reply until several minutes later when
I hear a qso in progress fade up. If that happens, I will generally
vacate the frequency, apologizing to the other gentlemen if
necessary.

>The freq, time, net, or just a qso, does not matter. I get mad at someone
>in one of the above situations. So what do I do, I start playing a tape
>that benefits amateur radio. I basically QRM the freq. legally. You say

Appalling. To deliberately ADD to the QRM situation, IMHO, only
makes the situation worse and will help render a frequency more
unuseable than it already is.

As for whether that is legal or not - I would like to suggest
that what is "legal" we hams should consider as the ABSOLUTE MINIMUM
STANDARD OF CONDUCT and operate with MORE consideration than that.
Or to borrow the phrase, just because Something is "legal" does NOT
always make it RIGHT or APPROPRIATE in a given case.

>well what happens on 3975 does not affect you and you are right, but next
>week someone may decide to use the freq you use for a broadcast freq. How
>would DX'ers like for someone to transmit bulletins on top of the Family
>Hour all day. Or maybe on East Cars, Collins Trader Net, or even the
>Traders Net. If I understand the rules I could knock out any of these
>with a one way broadcast as long as it benefits amateur radio.

>This matter is more serious than what I think the amateur community is
>taking it. I do not want to see the ARRL Bulletins taken off the air but
>I also do not want people to come on the freq. I have been using for a
>hour and just start broadcasting. I hope this brings to light the side of
>this situation I see. In a time when QRM is a problem already I do not
>think we need to make it legal.

What a lot of hams really need is to have a dose of good, old
fashioned common sense and consideration injected intravenously until
the point is made.

There is a veritable shitload of spectrum out there for our
use. Yet we are having thermonuclear squabbles over ONE bloody frequency
that seems to draw angry hams like sharks to a bleeding fish !!
IMHO, this is probably one of the stupidest things happening in ham radio
right now. If the only reason anyone has a license and a rig is to go
participate in the next QRM war on whatever band, then they're a
ham for the wrong reason.

Now I will admit - where my 10-meter operations are limited
to 28.3 to 28.5 MHz due to class of license (currently), sure - it
gets annoying when a group of morons get involved in a "channel war"
like what I used to hear on 28.325 that would gobble up a fair amount
of THAT segment of the band. But I categorically REFUSE to lower MY
operations to that level and join in deliberately QRMing there.
I am NOT, however, unwilling to pick up the phone and dial an
FCC field station and inform them of what's going on......

I've been a licensed ham over 20 years - I've heard just
about every kind of liddy behavior there is. I just refuse to
participate in deliberate QRM.

975. San Francisco Conference Bridge ???

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-14 00:00:00 UTC
From: scotte@ccs.neu.edu
Message-ID: <3mme21$61b@camelot.ccs.neu.edu>

Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.digital.misc

A friend of mine told me via a local Boston repeater of an AMPRnet conference bridge we was on, which he believed was in San Francisco.

He couldn't remember the call, but thought it was ke6ocs. I checked, and that callsign doesn't exist.

He said that at 7:30pm Pacific, there was a net on that system called something like the Buffalo net.

Anyone know the address of the AMPRnet system? Of the Internet <-> AMPRnet gateway?

Thanks much.

In article <3mju6c$h8s@bigblue.oit.unc.edu>, Terry.Murphy@launchpad.unc.edu (terry murphy) writes:
|>Dumbing Down
|> SOS for Learning (from the Editorial page- Durham,NC Herald
|>Sun 11 April 1995)
|> Getting a First Class badge in the boy scouts was made much easier
|>some years ago when the requirements for learning morse code was dropped.
|>Before that change, many a boy remained a Second Class scout for his
|>unwillingness to learn dots and dashes.
|> And now comes the news that the Coast Guard has dropped the use of
|>Morse code. Modern communications technology, the service says, has sent
|>Samuel F.B. Morse's telegraphic code the way of the Pony Express.
|> Maybe it's a coincidence, but these developments seem to have come as
|>society is dumbing down to accede to the protestations of those who can't
|>or won't push the envelope of learning.

Learning Morse Code is a way to "push the envelope of learning"???? Ya, right.
I guess we should still be teaching science students how to use a slide
rule too. After all, I had to learn how to use one, so dropping it
from the curriculum must certainly have been a dumbing down exercise. And
while we're at it, lets bring back teaching how to use Napier's bones.

What proof does the writer give for this "dumbing down"? I hear this crap
all the time, yet what is being taught in elementary schools today is
beyond what I was taught, and you can bet it is far far beyond what was
taught 100 years ago. Perhaps it is just sour grapes. I hear folks complain
that Computer Science curriculums at many schools no longer require learning
assembler or how to write a compiler or operating system. Perhaps instead
of screaming "dumbing down" one should look at the driving forces behind
such changes and examine what else is being taught or learned in place
of the dropped material. When I started in CS, software engineering wasn't
even being taught, now it's a degree program at many schools. Or should
all electrical engineers still be taught how to design and build tetrodes?

Who signed this article anyway?

>33055 what ever that is). Wonder if anyone has any experience with this
>vehicle or a Nissan putting 2m FM in it: problems with the on-board
>computer, noise from it or the possibility of damage to it from the RF.

I had a 1988 Pathfinder. Until the computer was replaced at 43K after it wouldn't pass an emission inspection (it and most of the under-hood widgets -- thank god for the 50K emissions warrenty) it put out an S9 signal on my favorite repeater. Nissan's answer (until it was there problem eg: emissions) was......Does the truck work without your radio? No radio->computer problems though...although occasionally 45w UHF would cause the cruise control to speed up.

Use the biggest wire you can drag from the battery to the radio. I use a #12 zip cord I found at a home supply warehouse. Fuse both leads. Might also consider a widget I saw at an electronics shop here -- high amp relay that breaks the connection to the radio during starter cranking.

good luck!

You can download the whole FCC database (32+megs zipped) from fcc.gov
Its updated every week -- there are also updates abt every other day of
changes e.g. new calls dropped calls changes in add etc.

all you need is a lot of download time (especially if you are using a
slow modem)

I am relpying to whoever replied to me. Since you did not leave your name or a call this is the only way I know to do it. I am not sure you are even a ham.

The most and only thing you said that even meant anything was about K1MAN coming on the air. You stated that people should know what time he does his bulletins and clear the freq for him. Wait a minute here. I was under the impression that NO ONE owned a freq. This means if I am in qso with someone I have that freq until I am done. Maybe I missed a rule change on this. I might leave the freq to be nice but the bottom line is I do not have to. So if K1MAN starts transmitting on top of my qso that is QRM and done intentionally. You can say what you want but that is all it is. Whether you want to believe it or not he has done this on several occasions.

I will make another comment that is going to make some people mad but I am still going to say it. I am so tired of trying to start a qso somewhere, ask 2 or 3 times is the freq busy and call CQ. I start a qso and then about 20 minutes later someone comes up and says I am interfering with a net that just started. When I explain the situation, I always get the same answer. This net has met here since the birth of mankind and you have no right messing it up.

Well guys you keep talking about what to do to get new hams interested in the hobby, I think you need to look at the above statement. There is only so much room on the bands anyway and when guys think they own freqs and have been there all their life and run anyone who comes near off, what do you expect? Most of them will not let you in their little click so you can't talk to them and once they hear you have a young voice you are no good anyway.

If you would like to compare this to something, look at the problems the VFW, American Legion, and other established vetrans groups are having. They have no members. The reason for this was that the old war buddies turned their back on the Vietnam veteran in the '70s. The Vietnam vet was not worthy of them and now they have all gone and nobody is there to replace them. This could happen in ham radio real easy.

These are only my opinions but sometimes I get carried away. I have been a ham since 1976 and I guess you could say that I might be sort of one of the old boys. I do not feel that way. I want to do everything I can do to see the hobby grow, no matter if that means changes I do not like. I feel it is time for changes at the top and get some younger people in there with new ideas. By the way I am 47, so no one flames me for being a young revolutionist. We need to put input in this or someday we may not have nothing but a radio to look at.

I'd recommend you contact the ARRL for a package at least two months in advance.

Call the switchboard/operator, they'll direct your call.

Each country has different specifications. Don't try to wing it. Some countries consider people with unregistered transmitters as spies. Be careful and follow the rules.

Good luck.

Can someone tell me what a Tech Plus is? I saw some mention of it in a message a few days ago but have never heard of it. There was something about a Tech Plus having 10 meter privileges. What is required to upgrade from Tech to Tech Plus?

I got my Tech license back in 1983 and renewed it in 1988 but have been off the air for almost 10 years due to spending all my extra money on computer equipment. Also living in an apartment restricts my ability to put up a decent antenna. I hope the license term is still 10 years as it was when I renewed mine in 1988.

Also can anyone tell me if there is anywhere on the Internet where I can get current information on what the privileges for a tech class license is as well as current operating rules and regulations.

If someone in the Dallas area happens to see this I would appreciate any information on where the ham radio stores in the DFW area are.

Thank You
Joe Vincent

: that helped speed it along. The whole things seems quite efficient
: these days!

That's the truth. I upgraded from Tech plus to general and it took about
2 weeks. When I first applied for a license it took 7 weeks for it to
get here. The general I could have waited on, the tech plus drove me nuts.

Hi Don
If you've got that mod could you e-mail it to me or post it here. This is
my first time in this News Group, and I don't see it posted on the Usenet
server I'm using. I just bought a TH-79A/E last weekend at a flea market
here. Also I've got a TH-78A also, and if you know of any mods for that I'd
be in your debt. Thanks in advance and 73s.

>

Ya, you'd rather have a piece of Japanese made "junk" eh !
I wonder what you base your conclusion on ("...just another piece of
Korean junk....garbage...") ? ie...have you done any thorough testing or
read any such reviews on the HTX-212 ? The comments that I've heard are
mostly positive ones. The specs look respectable to me !
Throwing out such negativity isn't too good for the publicity of an
American company. I suspect that Radio Shack contracts Maxcom or some
other overseas company to manufacture the rigs for them. The bottom line
..... although it is likely foriegn made, it's for a US company.
A lot more of the money stays at home and keeps people like YOU employed.
I'd bet that you drive a foriegn car too. Maybe you work for a radio dealer
that sells Japanese made rigs !
I'd like to hear how you decided it was a "piece of Korean made junk" ?
Think before you speak.

Got a a callsign there Duffy ? 73 Hugh VA3TO/VE3OYH
(Lets' see if he replies with his identity :))

Joe,
if you renewed in 1988 your still O.K.

Tech license: All privileges above 50.0 MHz

Tech plus: Pass a 5 WPM code test and you get Novice HF privileges.

From the book "Now your talking".

Get the ARRL FCC rule book, it has all the info as does most other ARRL
books.

If the local coordinators don't already know whether a repeater is
in their database or not, they can certainly look and see. The repeater
doesn't need a separate government issued call sign for that.

>
>I am trustee of one club repeater that has my call sign on it. My ego
>doesn't require that reinforcement so I'd just as soon it have it's own
>call.

The purpose of call signs is to determine who is responsible for a
transmission. It seems perfectly obvious that the trustee is responsible
for all transmissions by the repeater for which he is trustee, and the
trustee's primary call sign is the most logical identifier. A second call
sign is redundant.

>I would go so far as to suggest that the FCC NOT issue a repeater license
>without a piece of paper from a _recognized_ coordinating body saying the
>repeater is coordinated.

This opens a nasty can of worms. First, how do you deal with experimental
repeaters? Second, are you going to require a separate call sign for
each repeater an individual puts up, each link? What do you do when a
repeater is taken down, but the 10 year repeater call sign is still
valid, and the individual holding the call sign puts a repeater up
somewhere else?

This would draw the FCC into the very squabbles they most want to avoid.
It would make the FCC the defacto coordinator of amateur repeater spectrum,

something they have said over and over that they do not want to do (and something many of us *absolutely* don't want them to do), or it would be giving amateur coordinators regulatory powers (something they can't have without additional legislative authorization), and open coordinating bodies up to *many* more lawsuits than is the case currently because denying a coordination would be defacto refusal to grant a federal license to a qualified applicant. (I hope your coordinators have deep pockets. I know I'd sue if denied a repeater license under these conditions.)

Absolutely! Here's another Georgia ham who thinks this petition stinks!
This whole problem is among a sick little group operating exclusively
on 3975. It has nothing to do with the majority of amateurs. The FCC
should have just imposed quiet hours on this crowd and ended this
problem.

>be used.

Really? If someone goes through the hoops to get a coordination, how much
more trouble is it to fire off a 610R to the FCC and get a paper license
too? All the paper collectors should love that.

As a coordinator, you're supposed to decoordinate inactive repeaters,
but under separate repeater licensing the person will still have a
10 year repeater license. Who's going to police all those repeater
licenses? Suppose the repeater owner decides to move his repeater.
He's got a license, there's not a dang thing you can do about it.

Suppose the FCC lets you notify them to cancel repeater licenses
when the systems are taken down. Now suppose you send in a cancellation
for a machine that is merely down for repairs. One very ticked repeater
operator is going to sue your pants off when he gets a NAL for operating
with a recinded call after restoring the repeater to operation. Or, if
he finds you've screwed him and require him to file for a new license,
he's going to very reasonably expect *you* to pay for all the costs
he incurs until he can be operational again. Want to pay site rental

for a repeater that can't operate because of your screwup?

These are just a few of the potential problems. Under the current system, the worst a coordinator can do is screw up a coordination. That doesn't stop the amateur from legally operating his system until it's straightened out. It just doesn't give him the priority on frequency protection that coordination offers.

>This system woudl also cut down the number of uncoordinated repeaters. Tx has
>very few of those. But, one is too many.

Sounds like the same mentality that's attempting to swat K1MAN by destroying *all* of the worthwhile bulletin operations on HF.

>I seem to recall that one has to limit the length of the ground
>(from the equipment to earth), otherwise it becomes a radiator
>of your signal. How do folks get around this? There must be
>some common, effective way of grounding a second-story shack.
>
>Help! Tips and suggestions are appreciated!

The first suggestion to deal with RF grounds on an upper floor
is to not run unbalanced antennas. If you use a balanced antenna,
IE a dipole is a balanced antenna, and maintain antenna balance,
IE use a balun if needed, then you don't need an RF ground *at
all*. (The idea that your equipment must be connected to Earth
for good performance is mostly myth. Cars and airplanes are two
examples of station platforms not connected to Earth, yet their
radio equipment can operate just fine.)

If you must run an unbalanced antenna, IE a long wire is an
unbalanced antenna, then the best cure for RF in the shack
is a *counterpoise*. This is a random wire that's a quarter
wavelength at the operating frequency. Just attach it to the
antenna tuner ground lug and you're in business. (What this
does for you is essentially make your antenna *system* balanced,
with the feedpoint at the antenna tuner.)

Connection to Earth is only useful for electrical safety
purposes. However, that's *very* important, especially if
you live in an area plagued by thunderstorms. To protect
your equipment from lightning, you should practice single
point grounding and use a ground window.

A ground window is simply a small heavy conductive plate
to which *all* cables entering or leaving your station
must be connected, either directly in the case of nominally
ground potential runs, or through adequate suppressors for
conductors carrying power or signals. This plate is then
connected as directly as possible to Earth ground, usually
using wide copper strap (such as copper roof flashing) of
5 inch width, in a *straight line* to a ground field consisting
of several driven ground rods connected star fashion. (The

straight line is important as any sharp bends will introduce
excess inductance in the run.)

The ground window must be the *only* nominal ground connection
made to your equipment. And *every* cable must connect to the
ground window before being brought on into your shack. This
includes AC power, antenna leads, rotator control cables,
telephone, etc. There should be *no* path to ground for your
equipment that isn't first connected to the ground window.
If there is *just one* ground path that bypasses the ground
window, the protection it can offer will be negated.

The purpose of the ground window is to bring all conductors to
roughly the same potential in case of a strike. With no potential
differences above what the equipment is rated to handle between
conductors, no destructive currents can flow through the equipment.
While the ground window, and the station equipment to which it
is connected, may become elevated thousands of volts above Earth
potential during a strike, due to the inductance of the lead to
Earth, that doesn't matter since the potential is the *same* for
all the equipment.

You *must* avoid ground loops. In this respect, use of grounding
"buss bars" should be avoided. This common grounding method allows
current meshes to form from multiple pieces of equipment across
common impedances. This will, in effect, *modulate* the potential
seen as "common" by the various pieces of equipment, and allow
hazardous potential *differences* to exist across equipment
interconnect cabling. This will surely trash solid state components
during a strike. Instead, you must adhere to the single point
ground offered by the ground window if you want lightning strike
protection.

Remember that a lightning bolt has a surge current of around
8,000 amperes. You have to size and bond your conductors to
handle this load. The duration of the pulse is short, however,
only about 20 coulombs of charge is exchanged in the typical
strike, so the conductors don't have to be large enough to
handle the surge *continously*. Copper conductors equivalent
to #6 solid wire are sufficient.

Lightning is RF, though most of its energy falls below 2 MHz,
so the skin effect must be considered. That's why solid strap
is preferred over round wire. Strap has a larger surface area,
pound for pound, than round copper wires. Copper pipe can also
be used, but it's surface area will be half that of copper
strap with a width equal to the pipe circumfrence. That's
because the *inner* surface of the pipe forms a waveguide
beyond cutoff for the lightning RF currents, and isn't effective
at carrying away the surge. Strap, on the other hand, can fully
exploit *both* surfaces. (Pipe *does* have somewhat lower inductance,
so there is a tradeoff here.)

Woven braid conductors should be avoided for grounding runs because
braid has about 5 times the impedance of smooth solid strap on a
pound for pound of copper basis. There are a couple of reasons
for this. First, the braid strands weave in and out, adding inductance,
and second, because the skin effect tries to force currents to the
surface, while the individual strands keep diving into the middle
of the bundle, the currents try to flow from strand to strand along
the outside of the braid. Since the mechanical connections of one
strand to another are fairly loose, a high resistance path is formed.
Fully *tinned* braid is better, since the strands are now bonded
to each other better. However, solder *will* melt during a strike,
and you should plan to depend only on mechanically bonded connections,
IE clamps or cadwelding.

Since you are building your house, you have an opportunity now to
install a *Ufer ground*. Mr. Ufer developed this technique during
WWII for army ammo bunkers. The NEC approves its use for commercial
and home grounding systems. In essence, a Ufer ground is just rebar
in concrete. When the builder is preparing to pour your slab, make
sure all the rebar in the slab is bonded together, either cadwelded
or mechanically clamped, before the pour. And make sure to leave a
convienent attachment point exposed. A rule of thumb for a Ufer
ground is that it takes about 20 feet of 0.5 inch rebar to absorb
8,000 amperes of surge. More is better. The rebar should be embedded
in at least 4 inches of concrete.

The way a Ufer ground works is through two paths. First it forms
a large capacitance to Earth. This is an excellent RF coupling.
Second, concrete's ions generally are more conductive than native
soils, so you have a large number of virtual resistors in parallel
connected to Earth that offer a lower resistance than would a
smaller collection of driven rods. Earth is actually a lousy
conductor. Most currents are dissipated through Earth by capacitive
coupling and arcing from soil grain to soil grain. Concrete is a
better conductor since the grains are tightly bound together.

1005. Timewave or JPS DSP??

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-15 00:00:00 UTC
From: n9yjz@earth.execpc.com
Message-ID: <3mp359$k2s@homer.alpha.net>
Source record: 248547

I have roughly 2 decisions to make about DSP filters for my HF rig. I have heard wonderful things about the Timewave 59+, but have read good things about the JPS NIR-10. They both seem to include the basics in digital signal processing, but I was wondering how the people that own either one in this newsgroup feel about them. I am stuck between these two, and Amateur Electronic supply only has the Timewave demo on display..so I dont know about the JPS. Thanks to all who reply. 73!

Joe, N9YJZ n9yjz@earth.execpc.com

What's this? Shades of (dis)Incentive Licensing, are all the Lowfers to receive a slap in the face and be required to beep manual Morse to get their allocations back? For goodness sakes, amateurs, and everyone else, *already* have access to this spectrum. While many Lowfers are amateur radio operators, many are not. Current digital operations by Lowfers could be adversely affected by changing this spectrum to amateur exclusive, or even by allowing high power amateur operations. Much of what goes on here is extremely weak signal work using enhanced digital recovery methods. The data being passed is free from the content regulations of amateur radio. Changing this spectrum to amateur would represent a major unwarranted increase in regulation.

Top secret? If your phone is a Uniden, just call Indy and ask for a
service manual. No sweat, you'll have all the maintenance tricks in a
few days, and your VISA card will be $25 lighter.

Service mode allows you to monitor any selected cellular channel, or
transmit on any selected cellular channel. As Richard Nixon would say,
"Of course that would be wrong" unless you do it into a service monitor's
dummy load.

ARLP017 Propagation de KT7H

ZCZC AP85
QST de W1AW
Propagation Forecast Bulletin 17 ARLP017
From Tad Cook, KT7H
Seattle, WA April 15, 1995
To all radio amateurs

SB PROP ARL ARLP017
ARLP017 Propagation de KT7H

The average solar flux was about the same last week as the week previous, but for several days there were no visible sunspots. From April 5 through 9 the sunspot count was zero. Over time we should see more periods like this, as the current solar cycle enters what probably is its final year.

Currently the A and K indices are quite low, indicating stable conditions. This should continue for another week, when a recurring coronal hole appears around April 21 through 24. The worst conditions are predicted for April 22, with a possible A index around 25. Another possible troubled period is centered around May 4.

Solar flux should is rising slightly and should stay around the mid eighties through April 26, then dip slightly, and rise to around eighty after May 1.

Sunspot Numbers for April 6 through 12 were 0, 0, 0, 0, 12, 18 and 32, with a mean of 8.9. 10.7 cm flux was 71.8, 70.6, 71.8, 73, 74.5, 78 and 81.9, with a mean of 74.5.

The path projection for this week is from the center of the continental United States and from the West Coast to Scarborough Reef, BS7H.

From the center of the United States, 80 meters may be open briefly from q190z to 1130z, and 40 meters from 1030z to 1230z. Check 30 meters from 1130z to 1330z, and 20 meters from 1330z to 1600z.

From the West Coast of the United states check 80 meters from 1030z to 1330z, 40 meters from 1000z to 1430z, and 30 meters from 0830z to 1000z and again from 1330z to 1600z. 20 meters should be open from 0600z to 0830z and 1500z to 1600z.

Senator Barry Goldwater will be one of the guests on the Best of Net tonight. Please don't miss it! Let's turn out and welcome the LEGEND to the net.

If you have ever wanted the opportunity to speak to Senator Barry Goldwater be sure and check in tonight..... The Senator will check in around 2100 eastern on 3.975 Mhz. Questions and answers will probably begin at around 2130.

Also we will be having a brief appearance by Gordon West WB6NOA of the Gordon West Radio School. Author of many books and other types of study material and so forth sold at radio shack. Gordon has a surprise tonight.....

April 22nd - Next week's guest will be Carole Perry. Dayton's Ham of the Year Award winner.

April 29th - Dick Rutan the Pilot of Voyager, the first non-stop unrefueled world flight. !!!!!

For further information go to the ;
World Wide Web Home page of the "Best of 75 Net"
http://www.mindspring.com/~ko4ta/bestofnet.html

Thanks and we'll see you on the radio....

Sincerely,
Don Simpson - ko4ta@mindspring.com

1013. Using car battery for HT//Help Sought

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-15 00:00:00 UTC
From: Bishwa Shrestha <bishwa@rodeo.uwyo.edu>
Message-ID: <Pine.ULT.3.91.950415160949.17850A-100000@rodeo.uwyo.edu>
Source record: 248555

Checked the car battery and found that it produces 14.8 V Max when running. Want to use the HT at 10.8 Volts using the two resistors in series so that I can hook up the radio across one resistor producing 10.8 volts. However, my concern is about the current. At 200mW power output, the HT requires 250 mA and during the squelch mode, it requires around 35 mA only. Should I choose the resistor value using the max current value or min current value? Has anyone tried building the power supply as described above? OR should I just use the 14.8 V car battery just for recharging the 450mAH HT battery at lets say 45 mA current using the limiting resistor? Any response would be greatly appreciated. Please post or reply.
Bishwa Shrestha, KC7JFV

Excellent post. I own a HTX212 myself and can find no wrongs to this product. It meets my needs for voice and packet, has outstanding audio even with the built in speaker I might add, and since Tandy is in the process of changing their image, they deserve some credit for selling a product designed by hams for hams...

Don, The HTX212 is a motorola design and built by them. So who cares where it is built right? It's a Motorola! So I'm sure Don you can't dispute that a Motorola is a Motorola no matter if its built commercially or for ham use? The problem is that people still are in the 70's when it comes to the Radio Shack name. They are getting out of the business of coming up with their own poor designs of the past and are having knowledgable vendors produce products for them now.

From: Gerald Schmitt <ggs@aerie.lanl.gov>
Message-ID: <3mpsjb$cgu@newshost.lanl.gov>
Source record: 248562

Just to make your life a little more complicated I have both
and have not made up my mind yet. With the latest proms the
NIR-10 does a little better really deep in the noise. I don't have
the newest DSP-59+ proms yet but I understand they improve it.
The current setup has my satellite rig into both and the outputs
into the spearate inputs on the speaker. A push of a botton switches
between them. Sometimes the JPS is better sometimes the Timewave
is better.

1021. Cell fone conversion? anyone done it?

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-15 00:00:00 UTC
From: bryant6634@aol.com
Message-ID: <3mq0nv$m3r@newsbf02.news.aol.com>

Has anyone ever heard, or know anyone who has modified a cellular phone to work in the 900mhz range? I figure since it's synthesized, and it's not very far from the normal cell frequecies maybe someone has experimented with this?

Any info, one way or the other, would be appreciated.....

Thanks

Bryan

Yes, seems pretty stupid to put the database up in Sybase
format (the database they're apparently using.) The least
they could do is export the data as delimited ascii text
so it could be read into other database formats.

1995 PHD AMATEUR RADIO CONVENTION
SATURDAY MAY 20, 1995
Kansas City Market Center, I-435 & Front Street
talkin 146.34/94

0730 Exhibitors move in; 0830 Open to all
Admission $7.00 at the door, 12 and under no charge
Walkin registration open 0745 Saturday morning.
Handicap Parking South of Main Entrance

Schedule below

Advance Registration Form:

1995 PHD KC MIDWEST AMATEUR RADIO
CONVENTION REGISTRATION
SATURDAY, MAY 20, 1995

Number Amount

Registration @ $6.00 ______ ______
(admission)

Swap tables 8'X 30" (does not @ $10.00 ______ ______
include admission)Odd number of
tables 13 thru 19 available in blocks.
Tell us how you want our tables,
straight line or back to back, or
end cap includes one 6' table rest 8',
your choice
_____

Electricity, 120V AC @ $30.00 ______
you may use one plug-in strip.

You may share plug with someone @ $15.00 ______

Total Amount ______

Use a separate sheet of paper to list names and calls for badges.

Call_____ Name_____

Phone ( ) _____-_____

Address_____

City_____ State____ Zip_____-____

All table registrations received by May 8th will be honored, tables after May 8th, available on a first come basis. All registrations at the door will be $7.00 each, age 12 and under no charge. If you should want your tables next to someone, let us know who? I would like my tables next to:

Make all checks to PHD KC Convention and mail to:
PHD, PO Box 11, Liberty, MO 64068-0011.
All registrations and badges will be returned postpaid by First Class mail, if received by May 8, 1995. Those received after May 8th, will be held at the door!

--------- end of advance registration form -------

SCHEDULE:

Friday May 19, 14:00 to 20:00 Open for Exhibitors to move in. Pick up registrations & purchase new Registrations.

Saturday May 20

0730 Open for exhibitors to move in.

0830 Open to all

0845 "Youth Forum" Mr. Robert Inderbitzen, NQ1R, of the ARRL Educational Staff will host the Forum. Those attending will be invited to take part. Those 16 years and under receive a free pass to the Convention.

1000 "Stealth-Invisible Antennas" Mr. Dean Straw, N6BV, Senior Technical Editor, QST.

1015 "Educational Seminar" Mr. Robert Inderbitzen, NQ1R. Those teaching in the schools and amateurs teaching amateur radio are welcome. This Seminar the past two years has proved to be well received.

1115 ARRL Forum, Mr. Lew Gordon, K4VX, Midwest ARRL Director

1215 "Cheap and Dirty Antennas" live demonstration Mr. Dean Straw, N6BV, Senior Technical Editor QST.

1345 ATV Dale Lam, WA0NKE, KC ATV Club

1530 Prize Drawing
1700 Close

* Other programs may be added

Prizes:

All cannot be listed but at least seven amateurs will take home an HT. Some twenty five others will not go home empty handed.

Over 60,000 sq ft. of exhibit space. Over 400, 8 foot tables and 60 commercial booths are available. Over 2,000 free parking spaces. Free RV parking (no hookups). KC Market Center is conveniently located just Northwest of US I 435 and Front Street. Use exit #57 off US I 435 and West to first light and North to the site. Exit 57 is about 3 miles North of US I 70 or first exit South of the Missouri River on US I 435.

Hotels:

Park Place, on site $70. call (816)483-9900 or 1-800-821-8532, mention PHD for rate. Comfort Inn located US I435 and Front Street, $40, call (816)483-7900 or 1-800-221-2222. Other close by hotels, Holiday Inn and the Red Roof Inn.

1030. Re: which callbook server is most up-to-date?

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-15 00:00:00 UTC
From: Barrie Britton <bbritton@prolit.llu.edu>

1032. Need info on rotor Sat controllers

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-16 00:00:00 UTC
From: n9rze@firefly.prairienet.org
Message-ID: <n9rze-1604950320460001@ruger-4.slip.uiuc.edu>
Source record: 248430

I've been looking into building my own dish for S-band operation. The current rotors could not hold up a 6' dish. So I need to build a custom platform. In doing so I use a standard heavy duty rotor for the azimuth, but for the elevation I would use a screw-jack. Thing is, the screw-jack uses a reed switch to tell the controller how many rotations it has moved. But, as far as I can tell, amateur equipment uses pots to tell the controllers where they are. This is no problem, I would put a pot onto the elevation assembly. But what I don't know is, what info do the controllers get. How do they know where the rotors are pointing? Such as the AEA ST1, does it have preset memories for the various commercial rotors? Can I tell it a custom setting for my setup? As in, it ask's for me to point to 0 degrees elevation then save that resistance value, then point to 90 degrees elevation and save that too. Then the controller knows from what values to work with. Thus I've solved my delema for a custom controller. I'm interestd in any and all controllers out there, not just the AEA ST1. Thanks in advance.

1034. Re: Using car battery for HT//Help Sought

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-16 00:00:00 UTC
From: brucenc@aol.com
Message-ID: <3mq6jl$nfg@newsbf02.news.aol.com>
Source record: 248432

: Want to use the HT at 10.8 Volts using the two resistors in
:series so that I can hook up the radio across one resistor producing 10.8

:volts. However, my concern is about the current. At 200mW power output,

:the HT requires 250 mA and during the squelch mode, it requires around 35

:mA only. Should I choose the resistor value using the max current value
:or min current value? Has anyone tried building the power supply as
:described above? OR should I just use the 14.8 V car battery just for
:recharging the 450mAH HT battery at lets say 45 mA current using the
:limiting resistor? Any response would be greatly appreciated. Please
:post or reply.

I had the same problem and solved it using a few diodes in series to drop the voltage to the HT. Since the diodes have a (more or less) fixed voltage drop, the changing current draw is less of a problem. I had room in my HT for a small circuit board containing the diodes (It's an *old* HT) and a miniature DPDT relay. The relay is driven from the incoming car battery voltage and switches power through the diodes to the HT. It also switches the HT battery out of the circuit and through a current limiting resistor to the car battery for a slow trickle charge. It's worked fine, just be sure not to put too high a voltage into the HT or overcharge the NiCad's.

I have to agree with Neil, even though I cut out his comments. Sorry, Neil..

I have worked public service a lot since I was first licensed in 1958. I was the RO for the county that I grew up in and have continued to be active in AREC, ARES but can't find RACES anymore. I have observed that as an activity progresses many of the hams assigned to "bird dog" officials handle routine traffic without actually asking the official. This action needs to be done using a little common sense, though. It doesn't take a genius to manage most of these activities, just familiarity with the people involved and the processes. Hams bring more to the party than just communications.

Of course, there are the wannabe cops, etc. that need to be watched and sometimes reined in. That's what the net control station is for.

Just my $0.02...

Jim.

1042. Formation of a new Newsgroup

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-16 00:00:00 UTC
From: Adam O'Donnell <adam@libertynet.org>
Message-ID: <3mrbc2$q1o@netnews.upenn.edu>
Source record: 248440

Hello all.

How many people would be interested in the formation of a new
newsgroup devoted to amateur radio communications for people
who live in apartments or areas with antenna restrictions?
The newsgroup would be names rec.radio.amateur.stealth or
rec.radio.amateur.calndestine. (I personally prefer the stealth
one.) What do you think? How would I go about the formation
of the newsgroup?

Please carbon copies of all replies to the message to me.

Joe --

vincent@crl.com (Joseph M. Vincent) writes:

>Can someone tell me what a Tech Plus is? I saw some mention of it
>in a message a few days ago but have never heard of it. There was

A tech plus is a technican class ham who has passed the five
wpm code test. There are two classes of tech's now-a-day,
the no-code (who only has to pass the novice and tech writtens -
elements 2 and 3a) and the tech-plus who has passed both the writtens
and the code test (elements 1a, 2 and 3a)

>What is required to upgrade from Tech to Tech Plus?

Passing the five wpm code test.

>I got my Tech license back in 1983 and renewed it in 1988 but have

So long as your Tech license has been in continous "force" since 1983
(i.e. no lapses) and you have the proof (like the original issue)
you are a Tech Plus. Tech licenses issued before 3/21/87 are
"grandfathered". To upgrade to General all you will have to do is
pass the 13 wpm test as you have credit for elements 1A, 2, 3A
and 3B (Section 97.505 of the FCC Rules applies).

>I hope the license term is still 10 years as it was when I
renewed mine in 1988.

You should be good to 1998.

>can get current information on what the privileges for a tech class
>license is as well as current operating rules and regulations.

With a tech plus you have tech privileges on VHF and up plus the
novice privileges on HF to include voice on 28300-28500.

All of these things are true. Be aware that (1) Lyndon handles this
mailing list manually, there is not majordomo type software up and
running at this time. (He tried a listserv type operation for a
while, I think, but had too many problems). (2) He's had a lot of
problems lately with bounces and broken gateways.

I think the keyword here is patience.

Does anybody have any idea what that rushing/roaring sound that comes up and covers 40 meters at night is? It comes up about 2000 EDT and covers the whole band, although it is not too awful down toward 7000. It's like standing behind a DC-9 and is typically S7-9. I don't recall anything like it before and it's been there most of the time for the last two months.

Source record: 248452

Mike Basinger (dbasinge@nickel.ucs.indiana.edu) wrote:
: I got my HTX-202 radio back yesterday from the shop, but it was repaired.
: The problem I sent it in for was never fixed.

I had a similar problem with mine. It had several problems, but only the most obvious was fixed. I was angry because, due to a shipping error, it took over a month from the day it left the store until it arrived at the service center.

I called the manager of the store the next day and brought it back in that evening. They sent it out and told me to call the service center in a few days when the radio arrived there. The phone number of the service center was on the original (and the new) repair order.

I called and talked to the service center's manager. He gave me the name of the person who had repaired it originaly and I talked to him. He was a ham and explained how he tested it and why it did not fail for him. He fixed it and I had a perfect HTX-202 back in a week (from when I dropped it off).

: Also, I have misplaced my instruction book for my HTX-202 (just moved
: into a new house). I have forgotten how to program freqencies into
: memory. So I called my local Radio Shack asking if they would tell me
: over the phone how to do it, or allow me to photocopy that page from the
: book. The sales person said no, but they would order me one for $10.00.

If you have the service plan, they should replace the manual. They no longer need a copy of the receipt for the service plan. A toll free call will get them all the information they need if you provide the serial number. Note that the number tends to be busy and they will probably avoid calling if they can.

: I paid $230.00 for the radio and 5 year warrenty. you think they could
: give me some phone assistance.

It sounds to me like you got a bad salesperson. They may not have wanted to help you if the store was busy, but they should have offered to photocopy the page when they had time and fax or mail it to you if you could not come in.

I don't think you were ripped off, as I have heard lots of horror stories from other hams, and have a few of my own, about service everywhere. Radio Shack has its bad days just like everyone else. However, now you understand why I buy mostly ICOM equipment and buy almost everything I can from a local dealer where all the salespeople are hams. I pay more up front, but it has been worth it in the end.

I buy lots of stuff from radio shack, where else do you get a db-25 connector at 8pm on a saturday? and make it a point to be known by the salespeople. I also know which ones to buy from and which ones to ignore.

I have also found that the managment of radio shack (both local and national) care about customer satisfaction. They are willing to listen to complaints and try to help. If you have complaint, a well written (not an angry missive) letter will get results. So don't just go let this rest, go get your radio fixed.

BTW, I have heard that some stores claim to offer loaners while your radio is being fixed. I have never been able to get one, and would be interested in hearing from someone who has.

Disclaimer: I am not connected in any way to radio shack except as a usually satisfied customer for 30 years.

Greeting y'all!
I have two strange questions:

1) Does any one know if there is any amateur activity in Ashville, NC during the Honda Hoot in June? It is a motorcycle gathering, but I figured if there is one ham going (me) there are probably others.

and

2) Does any one have any ideas about either water proof enclosures for mounting HT's (on a motorcycle) or of water proof Ht's?

Any info on either (any) subject is appreciated.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 16/2330Z APRIL 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 16 APRIL AND FORECAST FOR 17 APRIL - 19 APRIL

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 89/33

GOES satellite data for 15 Apr
Daily Proton Fluence >1 MeV: NA
Daily Proton Fluence >10 MeV: NA
Daily Electron Fluence >2 MeV: NA
X-ray background: NA
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
17 Apr 18 Apr 19 Apr
Activity Low Low Low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 17 Apr: 90/34

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet

Estimated Indices : A K Observed A Index 15 Apr
Learmonth 4 2111 1121
Fredericksburg 4 3
Planetary 5 5

Observed Kp for 15 Apr: 2211 1221
2B. MAGNETIC FORECAST

17 Apr 5 Quiet
18 Apr 5 Quiet
19 Apr 5 Quiet

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH

16 Apr normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
17 Apr normal normal normal
18 Apr normal normal normal
19 Apr normal normal normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
16 Apr 28 slightly above predicted monthly values

Predicted Monthly T index for April: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
17 Apr 35 10 to 15% above predicted monthly values
18 Apr 40 10 to 15% above predicted monthly values
19 Apr 40 10 to 15% above predicted monthly values
COMMENT: MUFs at Townsville and Hobart were near predicted monthly
values. Good HF conditions expected over next three days.

I don't know about your car or your radio... but try wiring it straight to the battery terminals through the firewall... this is a better connection and elimates more noise, and should give you less problems getting your full power.

I agree with this. As a matter of fact, my father-in-law just received
W5YI's $5 offer to renew in the mail the other day... Ha!

> Whether you want to believe it or not he has done this on several
> occasions.

Jim-- No one owns a frequency, this is true. Sure, you "legally" have
a frequency until you are done, however a little cooperation can go a long
way. A net or bulletin that has existed on a certain frequency for years
probably should have "gentlemanly priority" on that frequency and it would
be most appropriate for the net control station to "ask" you if you could
move your QSO 5 or 10 KC up or down. Obviously it is much easier for 2 or
3 people to move than for an entire net, wouldn't you say? Cooperation.
We were supposed to have started learning that back in pre-school or
kindergarten...

> I will make another comment that is going to make some people mad but I
> am still going to say it. I am so tired of trying to start a qso
> somewhere, ask 2 or 3 times is the freq busy and call CQ. I start a qso

> interfering with a net that just started. When I explain the situation, I
> always get the same answer. This net has met here since the birth of
> mankind and you have no right messing it up.

Again, the net control operator or a station that is able to communicate
with you should politely explain that there is a net taking place and ask
you if you could move off a few KC to help facilitate the net. Would
you object to and not honor such a request? The request certainly doesn't
imply that you are any less important than the net, but that perhaps it
would be easier for you and the other party you are talking to to move than
try to coordinate the entire net QSYing. The person asking should, of
course, be polite in making such a request.

> Well guys you keep talking about what to do to get new hams interested in

> you expect? Most of them will not let you in their little click so you

> can't talk to them and once they hear you have a young voice you are no
> good anyway.

I don't believe that these folks you describe are the rule, but the exception to the rule. Sure, I've heard the people that think they have the frequency reserved for their own personal use even though no one is actively talking on it. They think they have the duty to patrol it to keep it open. These, my friend, are known as LIDS. They have a superiority complex that must be fed at every opportunity. It isn't worth arguing with these sorts... just consider the souce and move along without getting into an ungentlemanly exchange of words. It just isn't worth it. There are too many other nice people out there for you to expend your energy on. And besides, if you don't get into a shouting match with these LIDS, they don't get to feed their power hungry egos. :-)

> These are only my opinions but sometimes I get carried away. I have been

> revolutionist. We need to put input in this or someday we may not have
> nothing but a radio to look at.

Well, I've only been into the hobby for about 10 years now, so I guess that I might be considered a "newbie" by some. I do believe that the best way we as hams can help the hobby to grow and be perpetuated as a hobby we can all be proud of is to respect our fellow hams. What goes around, comes around. Consideration given will also be received. You remember the Golden Rule? Something so simple can go so far. I don't want to see this hobby become even more "legislated" with ridiculous new rules that take away as much good, if not more, than can possibly be gained.

Anyway, 73...

1068. ham ethics

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-16 00:00:00 UTC
From: dwain.hensley@mgmtsys.com
Message-ID: <90.13763.1478@mgmtsys.com>
Source record: 248466

I have a question for all you hams out there, here's was the scenario:

I was traveling through a nearby town which has an open repeater which
is owned by the local amateur club but is open for any use. The
repeater has an autopatch, which is closed to members only however.
From previous experience, hams have been very much willing to open up
closed patches for me to me a quick local call if i ask, however, in
this particular incident I was told that "NO ONE" but members only could
use the autopatch. I told them that was fine since my use was not an
emergency. Another listening ham jumped in and condemned the refusal of
the first ham and said that it was just "good ethics" to help a passing
through ham with the patch even if it was a closed one. The first ham
continued by saying that he was instructed not to yield the patch to any
non-member whether it was an emergency or not. I quickly jumped in and
stated that a ham is to help another ham which has an emergency in ANY
was possible. He told me that it was necessary to yield the repeater to
any emergency but opening the phone patch in the event of an emergency
was not required.

here are my questions:

(1) isn't it good ham practice to help another ham with a closed patch
even if his case is not an emergency?

(2) isn't it the law to help in any way possible (including use of the
patch) to someone with an emergency.

Again, i stress that i had no emergency but just was shocked by the
reply of the first ham.

: As another suggestion you should see whether HRO will deal
: (this may depend upon which of their various locations
: you are talking to).
: I bought a rotator from them for less than six other
: firms would sell it, plus they paid the shipping.

I just bought a Kenwood 742 from their VA store and found they had
the best price on both the radio and the accessories ... 220 module,
antenna, mount, etc. After it arrived I found they sent a 1200 module
rather than a 220. They shipped the 220 module immediately (got it in
two days).

It seems the norm anymore to require the customer to return the mistaken
part of the order before the retailer will supply the proper part. It was
nice to not have to deal with that. They had UPS pick up the 1200 module.

SB DX @ ALLBBS $OPDX.203
Ohio/Penn DX Bulletin No. 203

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 203
BID: $OPDX.203
April 17, 1995
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, KA3DBN, KQ4GC, NE8Z/HC1MD, NW8F, DF4RD, F5PYI, F6AJA, GU0SUP, PA3BIZ, 425 DX News and DL7VEE & DXNL for the following DX information.

5R, MADAGASCAR. JE8BKW and JH8CLU (as 5R8DL) will be active from April 28 until May 4. Their plans of bands and modes of activity were not reported.

BS7H, HUANG YAN DAO (aka Scarborough Reef, IOTA AS-116). The Chinese Radio Sports Association, CRSA, and the South China DX Team, SCSDX, has reportedly gone QRT as of 0200z April 16th.

CU3, AZORES. Bill, KQ4GC, will operate from the Island of Terceira as CU3/KQ4GC, from April 20-23rd. He will concentrate on 80-10 meters on SSB. QSL to: Bill Gallier, 4094 Sandy Run Drive, Middleburg, FL 32068.

GAZA STRIP AND JERICHO. Mehdi, F5PFP, will be active as F5PFP/GAZA and F5PFP/JERICHO between April 18th and the 25th. Activity of bands and modes were not reported, but QSL will go to F5PYI: Laurent Borde, L'Orme, F-42520 Maclas, France. There will be a colorful QSL available.

INTERNATIONAL MARCONI DAY will take place next weekend April 22nd. Many special event stations will be active (TOO MANY TO LIST) operating mainly on SSB, but some state they will operate on CW and the digital modes. Making contacts with at least 12 of these special event stations can qualify for a special event award. Details can be found in most amateur radio publications.

NEW QSL MANAGER. Cecil, NW8F, reports he is now the QSL Manager for Paul, 9L1PG and hopes to have a copy of Paul's log in about 3 to 4 weeks. Cecil thinks that cards should start coming out in late May.

QSL WOES... John, KA3DBN, reports a DX publication mistakenly reported him as QSL Manager for the recent VP2EN operation. He is receiving

cards for this operation along with cards from two other recent VP2E operations for which he has received a ton of cards. QSL VP2EN only to AA4NC.

TM0, GROIX ISLAND, FRANCE. French operators F1TXI, F5JOT, F5LGQ, F5OQJ, F6AUS, F6CKH, F6BFH and F9IE will use TM0PR from IOTA EU-048 (located in the Bretagne "Morbihan" Region Group), April 26th to May 1st. Activity will be on all bands (WARC included). QSL via F5JOT.

TO7, ST. PIERRE & MIQUELON (FP). Bruno/F5JYD and Eric/F5SSM will be using TO7I from April 27th to May 6th. They will be active all bands (including the WARC bands) on SSB and RTTY. They will try to operate from other different islands. QSL via F5JYD.

XE3, YUCATAN PENINSULA (MEXICO). Dr. Rick Dorsch, NE8Z/HC1MD, will once again be active from XE-land from April 14-24th as XE3/NE8Z. Rick will be transmitting from various areas such as; the archeological ruins of the Mayan city "Chichen Itza", Cancun and other remote areas of the Yucatan Peninsula. He will be using his Kenwood TS-680s with a vertical and wire antennas to be active on 160-10 meters, including the WARC bands, operating mostly CW (5 to 25 kHz up) with some SSB activity. QSL via K8LJG.

ZL8, KERMADEC ISLAND. The "425 DX News" reports that Barry, G4MFW/ZS1FJ, has obtained the permission to operate from Kermadec Island, but states he will be active only for few hours a day. Barry thinks he will be signing G4MFW/ZL8 from May 5-15th, on 15, 20, 40 and 80 meters.

WWII LIBERATION STATIONS ACTIVITIES DURING THE MONTH OF MAY.....

9H50VE will be active from Malta, from May 6-8th, celebrating the 50th Anniversary of the Allied's WWII victory. QSL to 9H50VE, P.O.Box 114, Valletta CMR01, Malta.

GB50LIB will be the callsign for this Special Event Station on the Island of Guernsey to celebrate the 50th Anniversary of the Liberation from Occupying Wartime Forces. The station will run from May 7-13th, with a 24 hour operation on May 9th, which is Liberation Day itself. Operations will take place from a 13th Century castle (Castle Cornet) in St. Peter Port. Activity will be on all HF bands on CW, SSB and RTTY. Providing that the conditions support it, there will be activity on VHF/UHF and on the satellites. QSL info is either via the Bureau, or to P.O. Box 100, St. Peter Port, Guernsey, Channel Islands, via UK, or to GU3HFN's CBA.

LN prefix will be used for the first time in amateur radio in conjunction with the commemoration of the 50th anniversary of the end of World War II in Norway (April 9, 1940 - May 8, 1945). The callsign LN1V will be on the air the week of May 1-8th in conjunction with the National Guard's commemoration of the liberation of Norway. LN1V will be on the air from Oslo using CW, SSB, and digital modes. Some of the activity will be from military radio stations, both modern field radio sets and radio sets used

more than 50 years ago during the war. Proposed frequencies:
SSB - 1840-1845, 3740-3745, 7040-7045, 14140-14145, 14195 (USA),
18140-18145, 21240-21245, 24940-24945, 28540-28545
CW - 1835, 3505, 7005, 10102, 14005, 18073, 21005, 24895, 28005
CW/USA - 3525, 7025, 14025, 21025
DIGITAL- 3587, 7037, 10140-10145, 14087, 18107, 21087, 24927, 28087

QSL for contacts with LN1V goes to the station manager:
LA4LN Tom V. Segalstad, P.O. Box 15 Kjelsas, N-0411 Oslo, Norway.

PI45, THE NETHERLANDS (SPECIAL EVENT STATIONS AND THE LIBERATION AWARD).
During the month of May, the Dutch Telecom has issued the special prefix
PI45 for 29 V.R.Z.A. club stations in celebration and remembrance of May
5th 1945, the day WWII came to an end. From May 1st until 31st look for
the following PI5 stations which are valid for the Liberation Award:
PI45ADH, PI45ARL, PI45AML, PI45AVG, PI45CQP/A, PI45DEC, PI45DHG, PI45EDE,
PI45EHV, PI45EMN, PI45GN, PI45HVB, PI45JUT, PI45KEI, PI45KGL, PI45PLM,
PI45RCK, PI45RMB, PI45SDH, PI45TWN, PI45UTC, PI45VGZ, PI45VRL, PI45VRZ/A,
PI45WBR, PI45YSM, PI45ZLB, PI45ZWN and several PA6 stations will be
signing /45. A special station signing PI5MEI (5th May), will ONLY be
active from May 1-13th. This station will be in Wageningen, the location
where HRH Prince Bernhard (Prince of The Netherlands) signed a peace
treaty. All stations will be active as much as possible during May and
will participate in festivities all over The Netherlands. However, on
May 4th, from 1000 to 2200z, there will be no activity from the PI45
stations, due to the remembrance of all who fell during WWII. A special
collectible A4 size colored "LIBERATION AWARD" can be obtained by working
any of the PI45 stations mentioned and or PA5MEI (which counts double)
or PA6 /45 stations. Europe stations must work at least 3 stations;
outside Europe at least 2 stations. Contacts can be made on all bands,
CW/SSB and including satellite but excluding repeater operations.
Applications for the AWARD should be sent along with 10 U.S. green
stamps and a log extract no later than July 15th to Awards Manager:
Ad de Bok (PE1EBJ), P.O. Box 56, 5320 AB Hedel, The Netherlands.

OPDX MAILING LIST. Just a reminder! The OPDX Bulletin can be received via
InterNet E-Mail (not Packet mail). Send an InterNet message to:
opdx-request@nshore.org
and on the "Subject:" line put the word "subscribe". No text is needed
in the body of the message but if you want to write something, it is
all right (I read them all!).

FAX YOUR DX INFORMATION NOW! Faxing is available Monday/Wednesday/Friday
from 0430 to 2330z only. The number is 216-237-8208 and the FAX card is
sharing the same phone line as BARF-80 BBS using a data/fax/phone switch.

Excerpts and distribution of The OPDX Bulletin are granted as long as
KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS
online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with
the Sysop or send InterNet Mail to: aq474@cleveland.freenet.edu or send
BitNet Mail to: aq474%cleveland.freenet@cunyvm or send PRODIGY Mail to:
DFJH48A or send a message via packet to KB8NW @ WA8BXN.OH.USA.NA

1076. SSTV program?

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-16 00:00:00 UTC
From: pryack@mtholyoke.edu
Message-ID: <3mpp7r$r7p@mudraker.mtholyoke.edu>
Source record: 248574

I'd like suggestions for a terminal program I can use with an MFJ1278 MMC
to decode SSTV in real time for screen display. TNX & 73 de Paul, W1ETH/6.

1077. Re: Timewave or JPS DSP??

Newsgroup: rec.radio.amateur.misc

In article <3mp359$k2s@homer.alpha.net>, n9yjz@earth.execpc.com says...
>
> I have roughly 2 decisions to make about DSP filters for my HF rig. I
>have heard wonderful things about the Timewave 59+, but have read good
>things about the JPS NIR-10. They both seem to include the basics in
>digital signal processing, but I was wondering how the people that own
>either one in this newsgroup feel about them. I am stuck between these
>two, and Amateur Electronic supply only has the Timewave demo on
>display..so I dont know about the JPS. Thanks to all who reply. 73!
>
>Joe, N9YJZ n9yjz@earth.execpc.com
>>>>>>>>>>>>>>>>>>>>>>>>>>>>>
I had a NIR-10 for about a month and was not happy with it. It did what
they claimed, I just didn't like the deep-well sound it imparted to the
audio. I sold it and as far as I know, the buyer is happy with it. He did
spend an hour or so listening to it in my shack and bought it anyway.

Go figure.....

73, Bill W7LZP

1078. Re: Cellular Phone Code...

Newsgroup: rec.radio.amateur.misc

> I guess the best thing to do is to get an ADVANCED (top secret) tech
> manual for your phone that explains all this. (It is probably impossible
> to get one of these manuals though.) Probably locked up in a vault!

I almost hate to admit that I read the group, but alt.2600 occasionally
has a post or 2 re these codes for a specific model cell phone.
I recall seeing one for Mot'rola phones on there recently.

Trouble with that group is you need to slog through about 1000 other
mostly useless posts to find anything of value. Occasionally on or
two do show up..

W.A. PACKET USER AND DIGIPEATER LIST

WE HAVE RECEIVED THE LATEST ISSUE OF THE ABOVE (THANKS TO CLEM
VK6CW), THE UPDATE OF 8TH APRIL 1995. THIS LIST IS COMPILED BY
PHIL VK6KS AND IS A VERY USEFUL REFERENCE.

IF YOU WOULD LIKE A COPY OF THIS LIST, SEND AN S.A.S.E. TO
ANARTS PO BOX 860 CROWS NEST 2065, OR DROP A PACKET MESSAGE TO
PAT VK2JPA @ VK2AAB.

ONLY ONE VK IN VOLTA CONTEST RESULTS

YES, THAT'S RIGHT -- THERE WAS ONLY ONE VK WHO TOOK PART IN
THE 28TH VOLTA RTTY CONTEST HELD IN MAY 1994. THAT ONE ENTRY
WAS FROM OUR OWN JIM VK2BQS WHO ONLY SENT IN A LOG TO
WAVE THE ANARTS FLAG.

WHERE WERE THE OTHER VK CONTESTERS? THERE MUST BE SOME OUT
THERE. IF YOU WILL NOT ENTER BECAUSE YOU CANNOT WIN -- THAT IS
THE WRONG ATTITUDE. WE NEED TO KEEP OVERSEAS COUNTRIES AWARE
THAT THERE IS AN AUSTRALIAN RTTY COMMUNITY OUT HERE, IF FOR NO
OTHER REASON THAN TO PROVE THAT AUSSIES ARE COMMUNICATORS,
THAT WE DO DESERVE OUR RADIO LICENCES. I WILL BET THAT THE SMA
KEEPS AN EYE ON THAT ASPECT.

THERE IS ANOTHER CONTEST COMING UP NEXT WEEKEND. WHAT ABOUT A FEW MORE ENTRANTS IN THE POLISH CONTEST? WE RAN THE RULES OVER THE LAST TWO WEEKS AND THEY ARE AVAILABLE ON THE PACKET SYSTEM IN VK. LETS RAISE OUR PROFILE AND PUT A FEW MORE VKS IN THE RESULTS LIST -- PLUS THINK OF ALL THE FUTURE FRIENDS YOU COULD BE MAKING.

HAPPY CONTESTING

IPS WEEKLY REPORT

---

07 APRIL - 13 APRIL

DATE OF ISSUE: 14 APRIL 1995

INDICES:

DATE 07 08 09 10 11 12 13
10CM 77 75 76 75 73 72 72
A 42 27 20 17 18 13 (7 ESTIMATED)
T 43 -31 -17 10 -5 -9 13

SOLAR ACTIVITY WAS VERY LOW 7TH TO 11TH APRIL, AND LOW ON 12TH AND 13TH.

THE GEOMAGNETIC FIELD AT LEARMONTH W.A. RANGED FROM UNSETTLED TO STORM LEVELS 7TH TO 8TH APRIL. THE FIELD WAS QUIET TO UNSETTLED ON 9TH, INCREASING TO QUIET TO ACTIVE ON 10TH TO 11TH. THE FIELD WAS UNSETTLED ON 12TH, REDUCING TO QUIET ON 13TH.

IONOSPHERIC F2 CRITICAL FREQUENCIES AT SYDNEY WERE ENHANCED BY UP TO 100 (ONE HUNDRED) PER CENT TO 1400UT, THEN 15 TO 40 PER CENT DEPRESSED THEREAFTER. FREQUENCIES WERE AGAIN DEPRESSED BY UP TO 40 PER CENT ON 8TH, DEPRESSED TO 30 PER CENT ON 10TH, THEN NEAR PREDICTED MONTHLY VALUES ON 10TH APRIL. OVER 11TH TO 13TH, FREQUENCIES WERE DEPRESSED BY UP TO 30 PER CENT DURING LOCAL DAY AND NEAR NORMAL AT NIGHT. SPREAD F WAS REPORTED DURING LOCAL NIGHT ON 8TH AND 13TH APRIL.

FORECAST (14 APRIL - 20 APRIL)

SOLAR: LOW.

GEOMAGNETIC: QUIET

IONOSPHERIC: NEAR TO 10 PER CENT ABOVE PREDICTED MONTHLY VALUES.

COURTESY OF THE IPS RADIO AND SPACE SERVICES

NOTES OF INTEREST:
SO. SHETLAND, VP8. Finally Andy, (SP2GOW) VP8CQS received gear loaned from IRDXA and is active putting a lovely signal. More activity on digital is expected from now on. Qsl via DL1EHH.

SPECIAL PFX, IY4W. The station IY4W (W for wireless) is active from Sasso Marconi (BO) until the end of April to celebrate the centenary of the radio. The station will be active mainly on CW and also on SSB and RTTY, all HF bands (WARC included). QSL via I4ALU.

MALAGASY Rep. 5R8. If someone who needs 5R8DS, Ben comes every day on ZS5S Box and a sked can be made.

MALTA, 9H. From 10 to 24 April Holger, DL5XAT, Matthias DH1OAH, and Felix, DL8OBC will be from Gozo Island (EU-023). Call will be 9H3SB, 9H3UF e 9H3UD. Operation on all bands and modes. QSL for 9H3SB via DL5XAT, Holger Binder, Thorkoppel 15A, D-22885 Barsbuettel, Germany; for 9H3UF via DH1OAH, Matthias Deutscher, Box 600121, D-30947 Ronnenberg, Germany; for 9H3UD to DL8OBC, Felix J. Riess, P.O.Box 1253, D-30984 Gehrden, Germany.
Has anyone recently received a qsl from FT5XJ Kerguelen Is.??.

The VK2SG RTTY DX NOTES are available on Internet via Telnet or FTP at ab6z.amp.org. The directory is called/rttynote. For next week's bulletin send your bandpass to Bob, WB2CJL AT W5KSI.#NOLA.LA.USA.NA.
GL de (DX2)Luciano, I5FLN@ZS5S.ZAF.AF

ARLD016 DX news

This week's bulletin was made possible with information provided by Steve, W9NUF, the Northern Illinois DX Association, Ken, V73C, Ralph, K1RH, Joe, NJ1Q, Tedd, KB8NW, the OPDX Bulletin, the Yankee Clipper Contest Club

PacketCluster network and the Contest Corral column from the pages of QST magazine. Thanks to all.

CAMEROON. Jim, TJ1JB, aka 5X1B, has been operating CW around 14027 kHz between 1930 and 2330z. He is working for the American embassy in Cameroon. QSL via KE9A.

UGANDA. Frank, 5X4D, is on the air almost daily starting at 1800z on 21295 kHz and then on 14245 kHz at 1900z. He may be leaving sometime early this month. QSL via IN3DYG. 5X4B has been operating PacTOR on 14073 kHz at around 2040z.

SPRATLY. The Japanese and Malaysian group has gone QRT. If you missed them you will have another chance, as a group of Philippine amateurs will activate DU0K April 10 to 16.

ETHIOPIA. ET3KV was heard on 18117 kHz around 1930z, ET3BT was heard working free style on 14226 kHz around 1915z, and ET2AA was heard on 21240 kHz around 1345z.

DJIBOUTI. J28FD, J28GR and J28BQ will be on the air as J20SF April 14 to 20. Their location will be Seven Brothers Islands group, IOTA AF-059, located in the Gulf of Aden. Plans are for CW and SSB activity on the IOTA frequencies. QSL via F5LBM.

VIETNAM. XV7SW reports a break in his normally busy work schedule and expects to be able to spend more time on the air. He is only authorized to operate on certain frequencies, and has applied for permission to operate on 1827 and 7012 kHz. Listen for him on 3505 kHz.

MALDIVES. DL1IAI will be QRV as 8Q7AI April 12 to 27. He will operate 80 through 10 meters and attempt some work on 160 meters. QSL via his home call.

NEPAL. An all band, CW and SSB operation by JA8MWU will begin about April 26 for approximately 10 days. QSL via his home call.

MAURITANIA. A multi-op group from Italy will be signing 5T0AS through April 20 from Tidra Island, IOTA AF-50. QSL via IT9AZS.

MARSHALL ISLANDS. Ken, V73C, reports that his new QSL manager is Bruce Smith, N4GAK.

QSL NOTES. Ralph, K1RH, wants it known that he is not, and never has been QSL manager for FP5DX. However, K1RH is manager for FP5EK. Ralph has not been manager for TF3CW for many years. Cards for him should go via the TF bureau. And K1RH was QSL manager for 8R1K through 1982. Since that time the 8R1K call has been re-assigned several times, in 1991 to OH2BH, and 1992 and 1993 to OH0XX.

IOTA SHORTS. VK6ML will operate from a small off-shore island
or shoal from May 12 to 16. He will sign VK6ISL. Listen for
a three day operation from a small southern Japanese island by
JA3IG/6 starting April 23. Both operations will be new ones
for the IOTA award.

COMING EVENTS

APRIL 22ND-23RD SPDX RTTY CONTEST

MAY 13TH-14TH VOLTA RTTY DX CONTEST

JUNE 10th-11th ANARTS WW RTTY DX CONTEST

Society information

The Society may be contacted at : PO Box 860, Crows Nest 2065
Australia, for such matters as membership and general
enquiries. Enquiries can also be made by packet to the
President (Col) VK2CTD @ VK2XSB, or the Secretary (Pat) VK2JPA
@ VK2AAB.

News items may be sent to Broadcast Officer PO Box 60
Blacktown 2148 Australia, or by packet to VK2JPA @ VK2AAB.

Email address for the Broadcast Officer is :

patl@pitt.conmusic.su.oz.au

The Society welcomes news items on any digital subjects from
anywhere in the broadcast coverage area. We are looking for-
ward to news from your areas to let other amateurs know what
you are doing in the hobby. Hope to hear from you.

Kenwood TH79 Dual Bander Modification and Feature Guide r1.0 8/21/94
==========
by Clayton Wagar, KD4IDN
920 West Crawford Street #7
Dalton, GA 30720

Here is a compiled list of modifications and features I've found for the
Kenwood TH79 Dual Band HT.

Most of these are borrowed from other operators, to whom we all owe thanks
for spreading information. I personally want everyone else to benefit from
what I've learned.

This is release 1.0 of this document, dated August 21, 1994.

If you have any other comments, mods, or information you would like to see
included in this document in the future, please send them to:
Clayton Wagar KD4IDN
yensid1@aol.com (fastest, since I travel 5 days a week)
wagarbc@mail.auburn.edu (ok alternate)

Outstanding questions at the time this document was released:

* Rumor of a keypad modification to the radio for "Wide band" TX, RX. If you
know of this mod, please write to me, even if you wish it not to be
published. This would save a number of poor radios from useless torture!

* Mods have not come from a Kenwood source, just experimentation by owners.

Hope you find all of this information useful. Again, please send corrections
or additions to yensid1@aol.com or wagarbc@mail.auburn.edu.

++++++++++
TH79 Description and Impressions, by Mike Musick, N0QBF
++++++++++

Lulled by the sexy small size, I succumbed (or, rather, the
credit card succumbed) and bought a Kenwood TH-79 dual-band H-T
recently. Already owning a TH-78, the comparison comes easy.

SPECS. The TH-79A is a U.S.-spec dual-band transceiver, featuring coverage from 144-148 and 438-450 MHz. Receive coverage is extended on the 2M side from 118 to 174 MHz with AM in the aircraft band; there is no extended UHF coverage without modification. Max power is rated 5W on VHF and 3.5W on UHF with a 12V source; max power with stock 600 mAH nicad pack is 2.5/2.0. There are three power levels for each band - high, low, and extra-low (30mW). There are 80 memory channels, with no evident expansion capability. U.S./Canada version comes with the CTCSS encode/decode option. Going price at a 7/17/94 hamfest was $480.

GENERAL IMPRESSIONS. Tiny, tiny, tiny. Imagine putting a small duckie on the ARRL Repeater Directory - except that the 79 is narrower by about an inch. With the standard battery and not counting the belt clip, the dimensions are roughly 2" wide, 5" tall, and 1" thick. The belt clip adds 3/8" to the thickness; I left it off so it would be pocketable, and, frankly, it fits moderately comfortably in my work slacks' front pockets, which was surprising. It's tiny! (Oh, I said that already.)

The 79's keyboard has larger buttons than it's predecessor (lacks the cover, too) which are much easier to use. Control layout in general is better and even in just a couple of days I appreciated the change. No more ambiguous power switch - it's in the primary band volume knob in a normal OFF/ON/VOL setup. Secondary band volume control is on the "ring" of the freq/channel encoder knob in a coaxial arrangement.

There are no squelch knobs; it a key+knob function for both bands. Squelch control was, well, interesting. There are only six "settings", with usually only the lowest setting opening the squelch under no signal. Reading between the lines in the manual, apparently the squelch circuit is semi-automatic. I expected some limitations, but had no complaints under actual use - it worked well.

With my expected habit of putting it in my pocket, I like the control lock switch - it's *not* an F-key function, but, rather is a slide switch next to the PTT. No more fumbling around to unlock it. Unfortunately, the lock function does not lock PTT - that has to be disabled with the "Tx Stop" menu setting. I found this out the hard way by putting it in my pocket and inadvertently keying-up a repeater.

The 79 has an alphanumeric display capability of two lines of 10 characters, which is used in several ways. First, there is a "guide" facility, which provides online instruction for most operation features with a scrolling display. Then there is a "menu" function, which provides access to the settings which were normally done with obscure F-key commands in the 78. Setting the various functions is very clear this way. There is also a status review mode, where the more important settings are displayed.

Finally, the alphanumeric display can be set for each programmed channel. Seven characters positions are available, and almost the entire extended ANSI character set - that's right: lower case, symbols, and accented characters - can be used. However, alpha display is mutually exclusive with frequency display. Frequency display mode can be selected in case you forgot what was "underneath" your programmed channel ID.

PERFORMANCE. I was impressed, without a doubt. The '79's sensitivity is markedly better than the 78, in both bands and especially in the extended portions of VHF. And, spurious signal (intermod) rejection seemed to be much better as well in the side-by-side tests.

The stock antenna, however, was awful. I bought an ANLI 5" dual-band flexi and it made a huge difference - signals just breaking squelch with the stock duck were full-scale with the ANLI.

Audio is fairly good for something so small. The quality was marginally better than the 78 and tended to distort less at max volume settings. Audio power would be stretched to use it, say, with the car window open going freeway speeds.

Having loaned my wattmeter to a friend, I wasn't able to get transmitter measurements to confirm power ratings. Reports from those on the receiving end have been favorable so far, though.

ADVANTAGES. As mentioned previously, the 79's receiver quality is significantly better than the 78, in both sensitivity and intermod rejection. Battery life - even with the smaller batteries - is supposed to be drastically improved due to a number of design changes, particularly in the transmitter finals. Have not been able to confirm that. And then there's the size.

>>> Continued from previous message
DISADVANTAGES. There are, unfortunately, a few. One thing that jumped-out very early was that there is no facility to "lock out" a channel from the memory scan. If you select memory scan (hold [MR] for 1 second), you get every channel programmed in the band active for that "side", whether you want it or not. IMO, this was a grave over sight on Kenwood's part. If someone knows how to do this or there is a "hidden" lockout function, please post it, because nothing in the manual even hints at being able to do this.

Another disadvantage, albeit minor, is that there are no clocks or timers. I normally eschew these gimmicks, but "on the road" I've made use of the timer feature in the 78 as an alarm clock. I'll miss it a little.

It has no 800 MHz receive, which the first two generations of TH-78 has. This isn't a hard disadvantage, because the current TH-78 has 800 MHz missing, too. I only mention this for current 78 owners who have pre-4/94 units.

And, so far it seems that there are fewer "hidden" features available, like cross-band repeat. I said "so far". There appears to be no extended F-key function activated by holding down the F key for 1 second; most of those feature selections are covered by the menu display. But there's more exploring to do and we might just bump into something interesting in the next few days - "power on" has significance in one important command (memory channel clear), so it may be important in switching other modes.

MODIFIABILITY. I studied the schematics (supplied) for the usual strap selections for extended range and different markets. Yes, they are there. When the opportunity permits I will cross-reference the mod codes against other Kenwood schematics and determine where the range extensions are. HOWEVER, there is very clear allusion to an 800 MHz receive feature, and checking the component list for the U.S. version codes, it appears that *all* of the 800 MHz components are missing. Kenwood is meeting the "no cellular" requirement purely by eliminating the 800 MHz receive section altogether. So, technically, you would probably be able to mod it for 800 MHz receive, but getting all of the right parts (about 40 or 50 surface mount components) and getting them to work without destroying something borders on improbable.

Overall, I like it, though I'm really hacked by the lack of scan memory lockout - they *REALLY* messed-up by not including it.

...mm

P.S. After another day with the TH-79, I'm bumping my head against more limitations.

Another feature lost from the TH-78: special scans. With the TH-78, it was possible to have a variety of special scan conditions. One of my favorites was to load a freq into the "call" channel, and by holding [CALL] for one second it would flip back and forth between two freqs. I used this a lot, and it just isn't there on the 79.

Also, I spent some time trying various power-on key combinations and found absolutely nothing. One thing for sure - if it isn't in the manual, it isn't likely to be discovered accidentally.

The more I "explore" this rig, the more I get the impression that feature selection may be "back to basics". Kenwood might be a little sore after the TS-50 experience with the FCC and may feel the need to make access to "tweaks" a little less obvious.

++
MARS/CAP Modification provided by Mike Musick, N0QBF
++

Here is the MARS/CAP modification for the new Kenwood TH-79A dual-band HT. Usual disclaimers about doing mods apply.

1. Remove battery.

2. Open case by first removing 3 screws (#00 Phillips) on back and 1 screw on side hidden underneath the rubber flap covering the DC power jack. Gently pry apart starting at top; BNC connector will move with back, knobs with front.

3. Spread unit out. Wires will "hinge" on the side with the PTT button.

4. Looking on the back of the keypad (front) half, locate green wire on upper left, just below the CTCSS decoder module.

5. Neatly cut this green wire, and tuck back in so ends won't touch each other or other components.

6. Reassemble.

Programmed memory will be lost since the CPU will notice the strap change and reset itself.

End result -

Before: VHF RX - 118.000-173.995 TX - 144.000-147.995
UHF RX - 438.000-449.995 TX - 438.000-449.995

After: VHF RX - 118.000-173.995 TX - 142.000-151.995
UHF RX - 420.000-449.995 TX - 420.000-449.995

Automatic repeater offset and shift selections remain normal.

If I read the schematic right, the green wire corresponds to
"W301", which also serves the same purpose as removing "D308".
More research needs to be done on other mods; I'm especially
interested in extending UHF receive beyond 450.

There is a row of diodes right below the uC which appear to be
D302 through D308, the configuration straps. HOWEVER - I need to
caution anybody thinking about playing with the diode straps that
it will not be a casual operation. For one thing, the diodes are
SMD "603" style - extra, extra tiny - and the plastic board
hold-downs molded into the front case are right on the landings
for most of the diodes. This means that the board will have to be
removed from the case (a very involved procedure), and working
with the tiny diodes *will* require magnification tools as well
as the correct micro-tip iron. It is not a job for the
inexperienced or all-thumbs.

Also, as noted previously, the non-US versions of the TH-79 have
an 800 MHz receive section. All RF components of this section are
not present in the US version. Frankly, it would easier to import
a gray-market version of the radio than it would be to attempt
restoring this coverage in the US with parts.

++
"Wide Band" Modification, provided by Cole Cunningham, AA7RD
++

Following is a modification for the Kenwood TH-79A Dual Band HT which
opens it up to tuning from 67-174 MHz and 400-511 MHz. Actual receive was
85-135.995 AM and 136-179.995 FM with reasonable (0.5 microvolt
or better) sensitivity at all the points I measured. Transmit was
136-179.995 and 400-511 with power dropping off at the ends but still
usable (about 0.5w on the high scale at the band edges).

As usual, I take no responsibility for the mods, or your use of the unit
after mod. Please exercise good judgement and don't endanger our ham bands
with your irresponsible actions.

The observations noted are all I tried and I have no further data.
This is such a delicate operation that one shot was all I wanted to do,
and when it worked I quit!!!

WARNING-CAUTION-LOOKOUT-ETC!!!
The diodes to be moved are microscopic!! About 1mm long by 0.5mm wide.
This mod should be done by professionals on a closed track only.
Children, do not attempt this at home. Requires extremely small soldering
tools and MUCH skill. I had a professional surface mount facility do mine...

1. Open the unit by removing three screws from the back and one under the
DC power input cover. Carefully separate the front and back pieces.
The two case halves may be disconnected by pulling the wired plug and by
prying the brown latch on the ribbon cable connector up enough to
release it.

2. On the front PC board in the lower right corner as viewed from the rear
with the knobs pointing up there are seven spots for diodes in a row,
with one diode missing.

```
|
o o o o x o o |
_______________|
2 3 4 5 6 7 8
```

The numbers are D302-D308, left to right, with D306 missing.

3. Remove D304, and D307. Put them away in a safe place (Just in case...)_

4. You should now have:

```
|
o o x o x x o |
_______________|
2 3 4 5 6 7 8
```

5. Reassemble and good Luck.

Enjoy, but don't create problems with the new capability...Wouldn't it be
nice if Kenwood would make a RX only mod with these capabilities and we
wouldn't have to worry about accidental transmissions where we shouldn't
be transmitting. I, for one, don't want or need to TX, just RX...

73, Cole, AA7RD
August 11, 1994

(Note - This mod also adds 2 more menu settings. One of which is an
AM/FM demod selector for the 300-400 Mhz band. To access this
band, select the VHF band, press F, then press the Low/Hi key.
Repeat to return to 144 Mhz. The AM/FM selector will allow you
to listen to Military transmissions in the 300Mhz band in

either AM or FM.
- Clayton)

++
Remote Base Operation with Kenwood 732/(733?), Clayton Wagar KD4IDN
++

Kenwood has now simplified remote base operation of their mobile rigs
with the TH79.

I will not give a step by step on how to control the mobile rigs, since
they are different. Hoewever, to really understand this feature, I would
first get to know the remote control feature on the mobile very well. This
makes the following explanation a little clearer!

To access this feature, hold [PTT] and [MR] while [POWER ON].

The display will indicate -RC-, which I presume means 'Remote Control'.

If you have correctly matched your DTSS codes, frequencies, etc, the
dual bander's keypad now becomes a function pad. Pressing certain keys
enables or disables functions on the mobile rig by sending the DTMF
sequences for you.

Please note that all this fuction does is send the DTMF tones over the air
to control your mobile rig. I have not made a list of what each key does,
but as the 79 sends the DTMF tones, the display will indicate the function.
(i.e. - RPT ON, RPT OFF, TONE ON, TONE OFF, etc.)

++
Post Modification Spec Sheet, by Clayton Wagar, KD4IDN
++

Here is a small chart showing the measured specifictions of TH79
S/N 60300272 after modification. The measurements were made with an
IFR 1200S Service Monitor, on the bench, with a 6V power supply.
Your milage may vary - these are just what happened with mine, and
I would suspect that most units are pretty similar.

Since everyone else has 2 cents about extended transmit, here's mine...
I think that everyone should have the right to modify their equipment
to suit their desires, within the law. However, as someone who has
exercised that right, I also think that those who use that capability
maliciously should be hung from the highest tree... ;)

>their image, they deserve some credit for selling a product designed by hams
>for hams...
In my book they deserve little or no credit. What are they doing to change their image? When I go into the store (I do buy connectors, miscellaneous parts there fairly frequently) I hear hams as a group being trashed and automatically blamed for any and all TVI/RFI, I hear the complete lack of knowledge of their sales people ("I'm not sure of the frequency of two meters - I think it's about two gigahertz..."), and I hear customers being given completely bogus promises ("If you travel somewhere else, you can make calls [on a cellular phone being sold] for just 95 cents.") Tandy doesn't require people to know anything to be hired, and then doesn't teach them anything. That's the basic problem.

>>>All I keep hearing from folks on the net is how many times they had to

>>in current history.

Ah, no. The threads are 1994/95, and have everything to do with current history. There are several good things that can be said about the 202s, one of which is that they are very good for intermod-troubled areas. Super reliability doesn't seem to be one of their virtues, and I would rather spend my money at a place where I can get some information and support rather than ignorance and animosity.

It's a shame they don't even remember where the name of the business comes from.

>
>If you push Tandy's service dept hard enough, that's what they'll tell
>you. Tandy's amatuer gear is OEM'd by everyone but R.S.

So what does it matter that it's OEM'd? That certainly is
a common enough practice in the industry. Who cares?
It boils down to this: does the radio work, and work well?
YES. Does it have the features commonly perceived as "needed"
by hams? YES. Is the price/features competitive? YES>

It's common knowledge that RS has had their problems in the past.
However, from what I've seen they are making an effort (and
succeeding) to overcome past difficulties. It's nice to see
them getting farther into the ham market - not everyone lives
next to HRO, AES, Texas Towers, etc., etc. I hope they expand
their amateur line! I have an HTX-212 and I think it's a pretty
decent 2m rig. C'mon guys - give 'em a chance. At least
they're trying.

>I dunno...maybe we could talk them into it!

RS already does carry some accessories. They have coax, various RF connectors, SWR/wattmeters, license study guides, code tapes, and now 2m and 70cm handhelds and a 2m mobile. They also have a 2m mobile mag mount antenna. I'm sure more will come.

>>- Why don't they have at least one ham employed at every store so that

>Another good idea! But it depends on how many hams are willing to work
>for Radio Shack!?!
>
>>
>>

Some stores do. In the past, I've worked part time for them. We had two hams in our store (myself and NS6K). Biggest problem there is that Tandy's pay plan stinks. On one hand, they want (or say they want) knowledgeable people but on the other hand they don't want to pay an appropriate rate. You basically work for slightly over minimum wage, and now Ft Worth has instituted a "revised" compensation plan that effectively gives the part timers a 20% to 30% *pay cut*. Any knowledgeable ham can make far more money elsewhere. When RS seriously wants hams on thiker staff, and is willing to pay a liveable wage, they'll get 'em!

Set the PLACE to 100 and then you can enter any frequency from 50-999 MHz. I
think its 50-299.9 MHz on the VHF and 300-999.9 MHz on the UHF.

There is nothing in the rules that prohibits using a computer to copy the code on, but, of course, you have to furnish the computer. The VE's will probably look it over pretty closely to be sure you don't have anything attached that will copy the code for you. They will probably also want to see the text you typed if for no other reason than to see if you copied 100 consecutive characters. We've had a couple people in our testing sessions use a lap-top.

Failing that. try writing longhand. It's a lot quicker than printing block letters altho harder to read sometimes. But then it's most important that YOU can read it to answer the questions.

I know the problem, tho. I ran into it too.

Funny you should mention it. Try printing a C with a - in it. C- becomes a quick E. However, if you copy a few words behind, you can write instead of print and 20WPM should be easier to copy.

> BTW, the original poster was a STUDENT PILOT.

I entered the thread a little late and couldn't understand the concern until that point was made. Yes, I agree a student should not be blabbing on the radio. However, some friends of mine had a 2 mtr 1/4 wave mounted on the bottom of the club Skyhawk and we would play with that, but always with at least two people.

Carrying it a bit further, I believe my old friend Fred, W9WAW did some fast scan in his TG-2 while a student did his thing up front.

As for the motorcycle, pop in some Steppenwolf in the Tour Glide and crank it up!

Ron:

I know what you mean. I'm experiencing it also, but I thought it was something here local to me and have been investigating that out with no luck. So others are hearing it too, that's interesting. It sounds almost like the "Russian Woodpecker" I used to hear out at sea when I was in the Navy and operating the ham bands while maritime mobile region 2. That was when the Soviet military were doing active wide band jamming. But they haven't been doing that since the last 7 or 8 years.

If anyone knows what this interference is, let us know.

Thanks and 73,

de Duane KJ7HO

From: homingin@aol.com
Message-ID: <3mt101$ca1@newsbf02.news.aol.com>
Source record: 248383

I attempted to reply directly to the author but mail was returned. Here is the reply:

Terry -

This is in reply to your rec.radio.amateur posting requesting information on doppler RDF articles The only 4-whip doppler published in a US ham magazine is the Dick Smith doppler, an Australian design that uses an inferior tone filtering method. A much better 4-whip unit is the Roanoke Doppler, which is quite popular in the USA. Parts cost here is about $100. It is fully described in the book TRANSMITTER HUNTING---Radio Direction Finding Simplified, published by Tab/McGraw-Hill (#2701), ISBN number 0-8306-2701-4

The book is available from ARRL and from 73 Magazine. I have made attempts to get it distributed by RSGB; no success so far. Circuit boards are available from Marty Mitchell N6ZAV and Tom Lewis AB5CK

Hope this helps.

Dan,

Toyota changed the 5-watt limit to 50 watts for the 1994 model year,
although that information did not make it into all of the owners manuals.

SILENT KEY

ERIC REIMANN VK2WH

IT IS WITH REGRET THAT WE ANNOUNCE THE PASSING OF ERICH REIMANN, VK2WH, WHO PASSED AWAY ON FRIDAY 7TH APRIL, AGED 71 YEARS. ERICH WAS A TRUE GENTLEMAN AND AN AMATEUR WHO SET THE STANDARD WHICH WE ALL SHOULD STRIVE TO EQUAL.

ERICH BECAME INTERESTED IN AMATEUR RADIO AS AN SWL, AND THEN BECAME ACTIVELY INVOLVED IN FORMING A NEW GERMAN AMATEUR RADIO CLUB IN 1946. HE QUICKLY GAINED HIS LICENCE IN 1947 WITH THE CALL DA5AQ. IN 1948 HE CHANGED TO THE CALL DL1SJ AND THE SAME YEAR BECAME PRESIDENT OF THE AMATEUR RADIO CLUB IN DETMOLD GERMANY, A POSITION WHICH HE RETAINED UNTIL 1958.

IN 1953, ERICH WAS GRANTED THE FIRST AMATEUR TELEVISION LICENCE IN EUROPE, AND, IN 1959, WAS AWARDED THE GOLDEN HONOURABLE D.A.R.C. MEDAL.

ERICH THEN MOVED TO AUSTRALIA AND CONDUCTED HIS OWN BUSINESS FROM 1970 TO 1993.

IN AUSTRALIA, ERICH BECAME INVOLVED IN THE AMATEUR SCENE EARLY AND WAS A MAJOR PARTICIPANT IN THE VISION TO USE AMATEUR TELEVISION AS A MEDIUM TO FURTHER RADIO AMATEURS' KNOWLEDGE. EARLY IN THE 80'S, HE PROVIDED A TELEVISION TRANSLATOR FOR USE WITH THE FLEDGLING ATV STATION VK2DTK FROM KENWOOD IN LANE COVE. THIS ALLOWED THE TRANSMISSION OF EDUCATIONAL MATERIAL ON CHANNEL 35 WHICH HAD EARLIER BEEN VIDEOTAPED AT THE GLADESVILLE AMATEUR RADIO CLUB CLASSES HELD AT LANE COVE.

WITHOUT ERICH'S ACTIVE ASSISTANCE WITH SOPHISTICATED TEST EQUIPMENT , EDUCATION VIA ATV WOULD HAVE BEEN DELAYED MANY YEARS, OR PERHAPS NOT TAKEN PLACE AT ALL.

ERICH WAS ALWAYS READY AND WILLING TO ASSIST IN ANY WORTHWHILE PROJECT WHICH BENEFITED AMATEUR RADIO. AS WELL AS BEING A LEADING MEMBER OF GLADESVILLE AMATEUR RADIO CLUB, IN 1991 ERICH BECAME ONE OF THE EARLY MEMBERS OF THE FLEDGLING AUSTRALIAN AMATEUR TELEVISION CLUB AND GAVE FREELY OF HIS EXPERTISE AND EXPERIENCE IN THE ATV FIELD TO HELP THE CLUB ON ITS WAY.

ERICH WAS ALSO A REPORTER FOR THE GERMAN ATV CLUB ON ACTIVITIES IN VK2.

OUTSIDE OF AMATEUR RADIO, ERICH HAD A STRONG INTEREST IN GLIDING AS A HOBBY AND WAS PRESIDENT OF THE CONCORDIA GLIDING CLUB FROM 1970 TO 1983.

ERICH IS SURVIVED BY HIS WIFE MELANIE, SON KLAUS AND DAUGHTER-IN-LAW DAGMAR, DAUGHTER EVELYN AND SON-IN-LAW MICHAEL, AND THEIR FAMILIES.

ERICH WILL BE GREATLY MISSED BY THE MEMBERS OF THE GLADESVILLE AMATEUR RADIO CLUB AS THE CLUB HAD A CLOSE WORKING RELATIONSHIP WITH ERICH IN HIS MANY ACTIVITIES, BOTH INSIDE AND OUTSIDE OF AMATEUR RADIO.

VALE ERICH REIMANN VK2WH

THIS ITEM WAS PREPARED FROM INFORMATION SUBMITTED BY THE COMMITTEE OF THE GLADESVILLE AMATEUR RADIO CLUB, STEPHEN PALL VK2PS, AND JOHN ROBINSON VK2XY.

Silent key -- VK3BBM

Silent key - VK3BBM

The Victorian Federal Councillor, Alan Noble VK3BBM, of Glen Waverley in Victoria, passed away unexpectedly sometime yesterday. (15th April). Alan was found in the backyard near his tower. The cause of death has not yet been determined.

Our sympathies go to Alan's family and friends.

Further details on next week's broadcast

VK2 DIVISION PRESIDENT'S MESSAGE

This is Michael Corbin, VK2PFQ.

During the week, in fact last Monday, I received via the Federal President's personal fax machine, a document entitled... "Framework for the submission to the Federal Government on Amateur Radio Service Licensing from the Wireless Institute of Australia". (close the inverted commas) This letter and associated documentation had been prepared by Roger Harrison. Mr. Harrison is a member of the WIA SMA Liaison team. It is addressed to W.I.A. Federal President, Division Presidents and Federal Councillors. It did not come from the Federal Office, as should have been the case....It did not come with any covering letter... Had the Federal President not sent this to us then, we would, as has happened in the past with monotonous regularity, never have received a copy at all.. Hmmmmmmmm!!! I know I keep saying this but..... One wonders whether other Divisions are treated in this fashion????? Why do we pay to have a fully staffed Office in Victoria if all correspondence doesn't go through THAT office???? I'll resist the urge.

It was most flattering to see that the method of preparation...Complete with exhortations to participate....Was

very similar to that suggested by the VK2 Division. That's OK, we don't mind people taking credit for our ideas. The important fact is that a submission IS PREPARED and that this submission is a REPRESENTATIVE view of ALL the HOBBY....."consensus".... didn't the Minister say...well if this is the way to get it, then this Division won't stand in the way. However, I do have one qualification. To date we have received many submissions. It is our intention to add these to any "other submission" if given the opportunity. If no such opportunity is given then this Division will proceed, as advertised, to prepare our own submission. The VK2 submission will be prepared by a committee, rather than by an individual. Anyone with any thoughts on this submission, who have as yet not made their opinions known, should commit their ideas to paper without delay.

The framework of the submission, which is to be prepared by Mr. Harrison is set out below as a service to our fellow amateurs. I encourage you to listen carefully, make notes if necessary then forward any comments to the address of your choice..... The Federal Office at PO Box 2175 CAULFIELD JUNCTION VICTORIA 3161 or The VK2 Division PO BOX 1066 PARRAMATTA NSW 2124, It does not really matter. What does matter is that someone gets your input. All this Division sought to do was to have a submission which....and I'll say it over and over....Is the consensus view of all amateurs.....We only wish to facilitate the transfer of information to the Minister.

While you get your pens, pencils and paper ready, I'll draw your attention to the existence of yet another publication from the SMA. It's entitled "Implementing Spectrum Licensing". I encourage everyone to get a copy and read it. If you want a copy, call the SMA and they will be delighted to forward one to you. Study it, make comments and forward them to us for collation, or to the Federal Office if that's your preference.....

Firstly I will read Mr. Harrison's letter, that's the letter we don't officially have a copy of, so that you will have a clear idea of the manner in which he, or is it "Federal" is approaching this matter.... at least I think they are....I'm not really sure because since we don't get copies of these types of things from the Federal Office....I'm not too sure whether they are "Official" or whether they are not! Anyhow it does not really matter so long as the job is done in the end. Listen carefully the proposal has some merit.

9 April, 1995

WIA Federal President, Division Presidents & Federal Councillors

Dear Colleagues,

Attached is a copy of the framework I have developed for the Institute's submission to the Federal Government on Amateur Radio Service Licensing.

The framework is structured in the format and manner of submissions presented to government by professional organisations. To do anything less would stamp our approach as "non-professional" and detract from its intended impact and effect. We would also be derogating our responsibility to the Divisions' members.

The submission cannot hope, nor should it attempt, to be "the final word" in the matter of Amateur Radio Service licensing in Australia, let alone focus solely on the Amateur Licence fees issue.

The Institute's policy and argument, since the 1990-91 submissions to the House of Representatives Standing Committee on Transport and Communications Infrastructure (HORSCOTCI), has been that the Amateur Radio Service does not "fit in" to Apparatus Licensing.

The purpose of the submission, on invitation from the Parliamentary Secretary to the Minister for Communications, Paul Elliott, is to open the debate on how the Amateur Radio Service might be better licensed in the future - and that encompasses everything from spectrum allocation, through licensing administration to costs, charges and fees.

The issue is no longer solely about fees. For example, the implementation of commercial Spectrum Licensing poses serious threats to a number of our bands, as is evident from the SMA's latest discussion paper, Implementing Spectrum Licensing, issued last week. The UHF 23 cm and 13 cm bands are earmarked for commercial spectrum licensing!

The order of the framework is arranged to provide a structured argument. Sections 9.0 and 10.0 are to explore current and future options.

Let me stress that, at this point, nothing about the framework (or the submission, for that matter) is yet set in concrete - and that includes the order.

Comments, suggestions, input, questions, referrals to useful sources are all welcome. But please don't procrastinate.

I have already had lengthy discussions around the Divisions, obtained the Institute's previous submissions, collated volumes of the material generated during the fees debate, co-opted the assistance of such experienced people as David Wardlaw VK3ADW and IARU Vice President Michael Owen VK3KI, obtained all the SMA's pertinent publications and government reports relevant to the

issues, obtained the latest copy (as of March 1995) of the consolidated Radiocommunications Act 1992 and Regulations, secured the Radio Communications Consultative Council minutes and reports, discussed issues with the University of N.S.W. Communications Law Association, etc. Whatever else you may think pertinent, relevant or useful, please let me know!

If you see any omissions or think of necessary inclusions - please let me know!

Time is of the essence.

As we have a fully-equipped home office - with multiple phone lines and a dedicated fax - I am readily contactable seven days a week. Don't hesitate.

I look forward to hearing from you.

Yours sincerely

Signed Roger Harrison VK2ZRH
Federal Vice Chairman.

A framework for the

SUBMISSION TO THE FEDERAL GOVERNMENT
ON
AMATEUR RADIO SERVICE LICENSING

-administrative arrangements
-fees regime
-framework for implementation

As I said this proposal has merit... I commend it to you.
Make your submission.....But make it now!

On another subject, it has been suggested on the packet radio network, that this Division has not published the fact that we

will be in court next Friday, to ask for permission to hold an annual general meeting. You'll recall this situation was one inherited by the present council.

My "packet detractor" suggest that there have been clandestine goings on at the crossroads. Corbin is trying to sneak this through before anyone can do anything about it....you know.... the usual sort of rubbish that appears each week on packet as a result of my Broadcast from... "that station"... to the west of Sydney. Ugh!

For the benefit of all, I'll go through this all once again.... For the last two weeks, and this will make three in a row....under the title of "Divisional News" and "Coming Events", we have published the fact, as is the legal requirement, that there is to be a court case involving this Division... Quite apart from that it has been on Packet along with all the other items in the Broadcast. Thanks to the weekly efforts of Pat Leeper VK2JPA. Stick around after my address, the next item is Divisional News....Hear it for yourself and.... If you have the time, check out the Coming Events segment and you will see that it gets a mention, as it has also had for the past two weeks.

So that I cannot be accused of hiding anything, I'll now read the Affidavit to you as it was lodged. Indeed, I'll read it exactly as it appeared this week on Packet....and I quote..

FEDERAL COURT OF AUSTRALIA
MICHAEL BEDE CORBIN
-V-
WIRELESS INSTITUTE OF AUSTRALIA NSW DIVISION

Lodgement No. NG3137/95
Lodgement Date.22nd March 1995
Hearing Place: Federal Court, level 18, Queens Square, Sydney
Court List: Corporations List

Summary of Orders Sought:
* To validate all acts of the company since January 1994
* To hold an AGM on 30th May 1995 or such other date as the Court may set;
* To appoint Peter Edward O'Connell as returning Officer;
* To hold an election in accordance with the articles of Association and By-Laws of the Company;
* To declare the results of the election at the AGM or, if not practicable, within 14 days of the AGM;..... unquote

Next Friday night there will be a meeting of the Council. This will be an open meeting. The meeting will commence at 7.30 PM. Members Only please. Perhaps a good opportunity to hear first hand the results of the case.

A full report will of course be included in next weeks Broadcast...

See you then.

Federal news

RECOMMENCEMENT OF AMATEUR RADIO AFTER WWII

Ideas and suggestions are being put forward on how Australian amateurs can mark the 50th anniversary of the recommencement of amateur radio here after the end of World War II.

As many amateurs know, amateur radio was banned during World War II.

At the outbreak of hostilities, radio amateurs received telegrams directing that they surrender their transmitters. The equipment was locked away for the duration of the war.

When the war ended in August 1945, there was considerable effort to get amateur radio re-established.

The government of the day was busy with post-war activities, including soldier resettlement, and amateur radio took a back seat.

However, new regulations for amateur radio were gazetted on 24 November, 1945.

Preparations for the 50th anniversary of this important milestone in amateur radio history are in hand, with research being conducted by Herb Stevens VK3JO.

Herb is researching the events leading up to, and immediately subsequent to the post-war recommencement.

Not a great deal of information and detail is available at present. Who were those radio amateurs to first get back on the air, and which bands did they use?

Herb would like to hear from anyone with information or recollections. His address is QTHR in the 1995 Call Book.

In the meantime, a number of possible ways of celebrating the recommencement have been put forward, including commemorative callsigns or a special prefix, and a nation-wide period of reunion on-air by those immediate post-war radio amateurs.

Ideas should be put to your Division's Council for consideration of both state activities and possible Federal WIA sponsored events.

Divisional news

"That"...court case

The following letter has been received by the "President" from the Divisional solicitor Lewarne & Goldsmith of Parramatta

and I quote ...

Mr. M. Corbin
80 Lalor Road
Quakers Hill 2763

Dear Sir,

Re: The Wireless Institute of Australia
New South Wales Division

We refer to your telephone conversation with the writer earlier today and confirm that your application in the above matter is to be heard at 9.30 a.m. on 21st April 1995.

We further confirm Counsel's advice that you inform all members of the Institute of the time and date by way of a broadcast. Please keep a transcript of the Broadcast so that we can annex it to an Affidavit of Notification which the writer shall prepare before 21st April.

Yours faithfully
Lewarne & Goldsmith

VK2 WICEN News

VK2 WICEN News

All WICEN members should have received the April newsletter by now; it contains administrative paperwork of interest to all members. WICEN is about to be donated a quantity of transceivers suitable for conversion to the 6m band; please indicate your interest in this equipment on the supplied form. Members interested in attending the Goulburn Conference are advised to complete the included form and return it to Morton VK2DEX; it promises to be interesting, with representatives from various emergency services and Federal WIA, and possibly the SMA. Nominations for the position of Deputy State Co-ordinator are now in order, as are nominations for the Management Committee; these nominations must be received by the State Secretary by Friday 28th April. Users of the BBS (which is in the process of moving) are invited to complete a survey; and finally there is a renewal form, which unfinancial members must return by 30th June if they wish to remain a member.

The Hunter WICEN region have a meeting on Monday, presided over by Pauline VK2GTB, and the Hunter Anzac March, commanded by John VK2JRC is on Tuesday. Finally, the Oberon Car Rally is on 29th April, with about 20 people required; please contact Alan VK2YYJ via packet radio at VK2CZR, or at work on (02) 839-1388.

Looking ahead next month, there is the Hawkesbury Bridge to Bridge Speedboat Race on 7th May, for which David VK2KLX is looking for volunteers; the annual Goulburn Training Seminar is on the weekend of 13-14th May, along with the Rathmines Fun Run co-ordinated by Steve VK2KBL; the Wyong Car Rally is on the weekend of 20th-21st

May, co-ordinated by David VK2UDT and Andy VK2XRX; and the Variety Club of Australia Newcastle Bash is on 23rd-26th May, with Maurie VK2CD in charge. Finally, the closing date for the Annual Reports is 31st May.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Blue Mountains on the first Monday of each month at 8.30pm on channel 7175 simplex, Hunter each Wednesday at 7.30pm on channel 6900, Northern Rivers each Wednesday at 8pm around 3610 kHz, Central Coast each Thursday at 8.30pm on channel 7125, and Sydney each Thursday at 9.30pm on channels 7150/8275.

-- Dave VK2KFU, WICEN (NSW) Inc. Publicity Officer

News briefs

NEWS BRIEFS

The Commonwealth Government is making funds available to local government, and other government agencies, to promote the use of renewable energy such as solar, for example in street lighting, parking meters, emergency telephones, and bus shelters. The Government will accept suggestions for other public uses of renewable energy technologies.

Applications for funding should be lodged by 30 April, so if you're employed in local government or a government agency, here's your chance to get more public use of renewable energy.

Send your applications to:

Renewable Energy & Environment Section
Department of Primary Industries and Energy
Phone (06) 272-4798 or (06) 272-3481
Fax (06) 273-1232

According to the Japanese Posts & Telecommunications Ministry, the number of mobile phone users in Japan doubled in the year ending 31 March. Mobile phone users now outnumber Radio Amateurs in Japan by four to one. Has anyone worked out the ratio for Australia?

*****

(This next item has nothing to do with radio, but is an "enlightening" example of how the simplest ideas are often the most effective):

New Scientist reports (via the Sydney Morning Herald) the latest innovation to combat the spread of intraveneous drug use. In order to prevent IV drug users pursuing their habit in restaurant and public lavatories, a cheap, simple (and presumably effective)

measure is to replace the existing lights therein with BLUE lights. Under the blue light, the drug user's veins, which are also blue, become invisible, making it very difficult to apply the needle.

*****

(Also nothing to do with radio, but an amusing instance of high technology going wrong in unexpected circumstances):

The Toronto Globe and Mail reports that a commercial jet carrying 72 pigs and 300 human passengers had to make an emergency landing after its fire alarms were triggered by excessive levels of methane, ammonia and body heat in the cargo hold, where the pigs were traveling.

Apparently, excessive flatulence, urine, droppings and the heat generated by the bodies of the pigs caused the automated fire-extinguishing system to flood the cargo hold with halon, killing 15 of the very valuable hogs. The risks of flying pigs are evident.

--Jose Reynaldo Setti at the University of Waterloo, Canada

*****

NewsBriefs gathers communications and technology news from Australian media and other sources worldwide. Thanks this week go to the Sydney Morning Herald, and The Australian, and the Internet comp.risks forum. If you have an interesting news item, please send it to the Divisional Office.

Fox hunting for birds

FOX HUNTING FOR THE BIRDS?

Attention all those of interested in fox hunting! According to a recent packet message from VK4KAC, you can now test your radio direction-finding skills on migratory birds. The Eastern Seaboard of Australia is a popular summer stay for thousands of different birds that migrate here to escape the northern winter. These birds are often caught and tagged, and some of them have transmitters placed on them so they can be tracked on their migratory movements. There are several travelling north along the Queensland coast at the moment, on their trip back to Siberia and other parts of Europe.

If you would like to try your hand at receiving their transmiss-ions, listen for them on the following frequencies:

150.020. 150.040, 150.060, and 150.080, and

100.00, 120.00, 140.00, and 160.00 MHz.

The transmissions are described by VK4KAC as "a tone of 40 pulses". If you hear any birds in your area please send packet mail with the date, time, the location when you heard the transmissions, to VK4KAC @ VK4KEL, or write to Po Box 357 Nambour QLD 4560.

--VK4KAC and the Queensland Wader Watch Group

Marconi's birthday

Marconi's Birthday

Next Saturday 22nd April 1995 is International Marconi Day celebrating Gugliemo Marconi's birthday.

The Wahroonga Amateur Historical Radio Association in conjunction with other international Marconi Day stations will be commemorating this event working a special event station with the callsign VK2IMD fo twenty four hours commencing at 10 am Easter Standard Time.

Depending on the number of operators on hand, frequencies will be:

voice 3.570 7.070 14.170 21.170 28.570

CW 14.035

Locally the call may be heard on 2m FM on the repeaters. Packet radio will be operating locally and overseas via MACUNI.

A QSL card may be obtained from one 2-way contact. Australian amateurs should send a S.A.S.E. with their QSL card to W.A.H.R.A. PO Box 600 Wahroonga 2076, or via the bureau. Overseas stations may send their cards via the bureau but must send IRCs to cover return postage for direct QSL. A special award is available from the Cornish Amateur Radio Club for logging twelve international Marconi Day stations.

For further information regarding these matters contact Jo Harris VK2KAA on (02) 489 4393; on packet to VK2KAA@VK2AAB.nsw.australia.

This item was submitted by David Ramsay VK2KLX Secretary of the Wahroonga Amateur Radio Association

SUMMARY BY PAT VK2JPA ANARTS BROADCAST OFFICER

Club news: Manly Warringah

CLUB NEWS

Members of the Manly-Waringah Radio Society are advised that the Society's usual lecture night will feature a visit to the Telstra earth station at Oxford Falls. Members should meet at the Telstra premises at 7:30pm.

The Manly-Warringah Radio Society meets every Wednesday evening at 7:30pm, at the Warringah Volunteer Services Centre, Kamber Road, Terry Hills. Visitors are always welcome--just call in on the Terry Hills repeater, on 146.875 MHz for directions.

--Richard VK2SKY, MWRS Publicity Officer

Club news: A.A.P.R.A.

Australian Amateur Packet Radio Association

The AAPRA AGM was held last Sunday. As there was no swing against the present members of the committee, they were re-elected with the exception of Ray VK2FRY who withdrew. To fulfil this vacancy and others, AAPRA cordially invited amateurs interested in packet

to join us.

AAPRA does not discriminate against anyone on the basis of gender, qualification, age, or anything else I can think of. The only requirement is an interest in packet and the ability to attend a meeting at Wahroonga once per month.

Phone number for details : 489 4393.

At a subsequent committee meeting, David VK2KLX was elected President, and Barry, VK2AAB, was elected as Vice-President.

This information comes from Geoff VK2BQ, Publicity Officer

Club news: St George

The St. George Amateur Radio Society's Computer Group will hold its next monthly meeting on Wednesday the 26th of this month of April at the usual venue which is at the premises of RCS Radio Pty. Ltd. located at 651 Forest Rd. Bexley, starting at 7-30pm.

St. george Society members and other interested amateurs are cordially invited to these meetings, normally held on the fourth Wednesday of each month, so that they may share their knowledge and interest in this fascinating adjunct to our hobby.

For any further information please contact Paul VK2UPB, Computer Group Leader on 018-404-162.

from Allan VK2XF Publicity Officer

I have no idea what it is, but Saturday night around 2300 EDT,
4/15, the 40m phone band was completely unusable. I tuned the
band and heard a horrific whooshing noise that was louder than
the foreign broadcasters. I too thought it was something local.
It was better down in the CW band but it was still there.

Hi Rich,
I'm sure I said something like ``NMO *at* NAVCAMS EASTPAC''. It wouldn't
have made sense to call NMO a NAVCAMS since the Coast Guard is certainly
not part of the Navy (we got to continue wearing beards *long* after
you folks were ordered to shave!).

[922]

The following is a QST

The coast guard says goodbye forever to Morse Code, the ARRL
tells its members that the W5YI petition to ban one-way
transmissions on the high frequency bands is a threat to W1AW and
Newsline asks the FCC to extend the commentary cutoff date on this
matter. All this and more on an extended Newsline report number
922 coming your way right now!

(*****
COAST GUARD CW IS RIP

The Coast Guard, after nearly a century of monitoring
telegraph distress calls has turned off its Morse code equipment
forever. At about 0015 UTC on April 1st the U.S. Coast Guard
station in Chesapeake, Virginia tapped out the end of its final
message and then turned off its gear.
In April 1993, the Coast Guard ceased CW operations on medium
wave frequencies of 400-500 kHz. That same June they graduated
their last class of communications specialists trained in the use
Morse code.
In closing down, the Coast Guard has followed the lead of other
services that have abandoned to use Morse Code. The Navy had long
ago given up CW in their communications. Everything is now sent
by voice or digital modes.
The Coast Guard says that one of the primary reasons it decided
to curtail Morse operations is because the use of code by merchant
ships has declined in recent years as it has for the military.
But the managers for shore stations KFS in San Francisco and
WLO in Mobile, Alabama have a different view. They say that the

decline of CW has stopped. At least for smaller ships that cannot afford to retrofit for satellite services. Both stations plan to continue offering CW service to those ships whose owners will not or cannot afford the additional expense of new computerized communications equipment.

(*****
ARRL SAYS MAIA PETITION THREATENS W1AW

It's beginning to sound as if the American Radio Relay League is gearing up to do battle with W5YI Report Newsletter editor Fred Maia and with the FCC over Maia's filing for a rules change. A proposal by Maia that will, if enacted, end all one-way bulletin transmissions on he high frequency bands.
In a message to its members the League says that Maia's petition is a threat to headquarters station W1AW. The league appears to be going on the offensive to try to kill the proposal before it gets to the Notice of Proposed Rule Making stage.
As reported last week, the FCC has assigned file number RM-8626 to the Maia petition. In its release on the ARRL points out that Maia is the publisher of a commercial newsletter, seeming to emphasize the word commercial.
The League goes on to say that the effect of the petition would be to put an end to the long tradition of service by its W1AW bulletin and code practice transmissions, and those of others.

(*****
PACKET FLAMES AT RM-8626

Nor is the ARRL alone in opposing. Several packet groups are already public in their opposition and the packet boards are literally flaming on this issue. There is fear among packet radio advocates that if enacted, the Maia proposal could mean the end of high frequency bulletin board operations. This, because packet operators say that the vast majority of postings to these boards are one-way bulletin type transmissions to the general ham public. That the texts and intent of their bulletins are in no way different than a general interest bulletin transmitted by W1AW.
Maia has told Newsline that his petition is aimed only at stations operating as one-way broadcast like services and that packet and other modes will not be harmed.
But the packet community is refusing to buy Maia's explanation. They say anything that might be interpreted as negatively impacting on their operations will not be tolerated.
Comments on the Maia petition should be sent before May 4th to the Secretary, FCC, Washington, DC 20554. A copy of your filing on the matter should also be sent to Mr. Maia's lawyer, Raymond A. Kowalski in care of Keller and Heckman, 1001 G Street NW, Washington, DC 20001.

(*****
NEWSLINE ASKS EXTENSION

In a related issue, Newsline has filed a petition to the FCC to extend the commentary cutoff date on RM-8626 to May 18th. This to give those taking part in an April 30th Bulletin Services Seminar at the Dayton Hamvention a chance to travel home and prepare comments to the FCC on the issue.
RM-8626 currently carries a May 4th commentary cutoff date. In our filing asking for an additional fourteen days we note the hardship on those attending the session in filing timely comments on the proposed regulatory change with only four days between the meeting and the current commentary cutoff date.
At airtime there has been no word from the Commission as to whether or not the extension we seek will be granted.

(*****
DAYTON FORUM TO DISCUSS RM 8626

Also, Hap Holly, KC9RP who will be moderating the bulletin services forum at the upcoming Dayton Hamvention says that RM-8626 is now the main topic to be discussed. He says he has invited everyone involved in the controversial rules change request to take part. Already its sponsor Fred Maia, W6YI has agreed to speak. The bulletin services forum is scheduled for Sunday morning April 30th at 9:30 am in meeting room 3.

(*****
FIRST CLASS PETITION DENIED

Jim Wells, N5HCT of Tyler, Texas has had his Petition for Rule Making to reestablish the First and Second Class commercial radiotelephone licenses denied by the FCC. The W5YI Report says that the commission turned Wells down on the basis that his request would create two commercial radio licenses for which the agency has no requirements. Also that doing so would result in significant administrative burdens to the FCC.

(*****
RETESTS ORDERED IN OKLAHOMA

This is a Newsline special report.
In a situation very reminiscent of last years situation in California, four amateur licensees in Oklahoma have been ordered by the Federal Communications Commission to be retested on suspect examinations.
The FCC says that the four took test elements from an ARRL volunteer examination team at two sessions in February and March of last year. And once again, just as in California, the ARRL Volunteer Examiner Coordinator, while making a routine check, discovered apparent irregularities at the two sessions. And as in the California cases, the ARRL immediately reported them to the FCC. Then, last December 14th the ARRL VEC suspended the

accreditation of three volunteer examiners who were present at the two test sessions.
Now, the FCC has acted. It has ordered the four to take retests, within 60 days, all exam elements that they passed at the sessions under scrutiny. As is standard procedure, they must retake the exams at sessions coordinated by a volunteer examiner coordinator other than the ARRL VEC, and no volunteer examiner present at the earlier sessions may administer the reexaminations. The FCC says license classes and call signs of the four amateurs will be adjusted according to the results of their re-examinations. Neither the FCC nor the supervising VEC has released the names of the applicants or the volunteer examiners alleged to be involved.

(*****
ARRL WILL NOT BE A COORDINATOR

The ARRL has reaffirmed that it has no interest in being a frequency coordinator. This league says that the FCC has agreed with other commenters who feel that the existing local frequency coordinators are the best qualified to accommodate amateur radio operations in the new 219 to 220 MHz band. As a result, the League says that the ARRL's role is defined as serving only as the national contact point. The League will also maintain a database of all amateur radio operations in the new band.

(*****
CULVER CITY ANTENNA ORDINANCE

The City of Culver City, California unanimously approved the introduction of an ordinance amending various sections of the Culver City Municipal Code relating to non-commercial, non-parabolic (Ham Radio) antennas. After a half-hour discussion on this matter (with several hams speaking and answering questions from the city council members), approval came at approx. 0035 hours PST on Tuesday morning, March 27, 1995 The ordinance will come up for reading next week and, hopefully, will be adopted. The antenna ordinance is based upon Santa Monica's(CA) July 1994 antenna ordinance except for one change. In Santa Monica, repairing a damaged antenna allows it to be repaired to its pre-existing condition. In the draft ordinance, any damages to the antenna must be repaired to meet current code requirements. Another key provision of the proposed ordinance says that an applicant must obtain a building permit prior to the installation of a ground mounted antenna structure or a roof mounted antenna structure for a roof mounted antennas weighing fifty pounds or more. An application for a use permit shall be reviewed on payment of a $15 fee, and an application for a Building Permit shall be reviewed on payment of a $25 fee.

(*****
HAM ELECTROCUTED

Some sad news to report. Another amateur has been killed while erecting an antenna. The Dallas Morning News reported that on March 18th that Ernest Rutledge, KC5CQR, of Keller, Texas, was helping a friend install an antenna in his backyard. Something went wrong during the installation and Rutledge was electrocuted.

(*****
MULTI LINGUAL SPACENEWS

Maurizio Bertolino has announced that he is translating issues of SpaceNews into the Italian language and making them available free of charge on his B-B-S in Italy. This raises the number of languages SpaceNews is available in to five. This includes English, French, Portugese, Spanish, and now, Italian.
For those who are not familiar, Spacenews is a weekly space oriented newsletter dealing primarily with ham radio space related matters. Its written in New Jersey each week by John Magliacane, KD2DB and is distributed over packet radio and on the Internet. Its also the very first ham radio newsletter to be read in space.

(*****
PBS TAPES HAM-SAT SHOW

Ken Ernandes, N2WWD reports that a PBS tape crew spent a very productive day, Sunday March 19th at the QTH of John Gordon, KD2JF preparing material for a forthcoming segment of the program "Signal to Noise", According to Ken, the show is a special on the transition of military systems to commercial use.
During the taping Ken and John made 5 contacts on AO-10. Stations were worked in Italy, Switzerland, Spain and Ohio. Some video footage of satellite tracking software was also recorded as well as nice background footage of KD2JF's OSCAR antennas in motion. Q-S-L cards were shown off, including some for SAREX and MIR contacts as well as two-way OSCAR QSOs.

(*****
CALL FOR PAPERS

For its 1995 AMSAT Annual Meeting and Space Symposium, will return to Orlando, Florida this year. Again for 1995, the Orlando Airport Holiday Inn will be the site for the gathering. Although the meeting is scheduled for October 6, 7 and 8, it is not too soon to start thinking about presenting a paper at this year's Symposium. The Chairman for Papers this year is Bob Walker, N4CU. Please contact him if you can honor us with your knowledge on a subject appropriate to amateur satellites. Bob can be reached on the internet at n4cu@amsat.org.

(*****
AMSAT QSL BUREAU

Bruce Paige, KK5DO sends along a reminder that the address for the AMSAT QSL bureau is the AMSAT QSL Bureau in care of Walt

Rader, WA3DMF 3702 Allison St., Brentwood, MD 20722. Bruce also says that if you are going to send your envelopes, be sure to include postage for the new rates. All stateside cards sent to the bureau are free of charge. All others are 10 cents per card.

(*****
NOAA-14 EXPERIENCES FAILURE

The motor for the Microwave Sounding Unit on the NOAA-14 spacecraft has stopped working, investigation into the failure is in progress. Records show the unit is from a delivery made to Martin Marietta dating back to 1984. Future NOAA spacecraft will not have this same unit--it will be replaced with a different type. NOAA-14 has been in orbit since last December.

(*****
CLUB CALLS HERE

Also on the regulatory scene, word that the first of the new Amateur Radio club station licenses. The first ones appear to have been issued on April 4.
The new club licenses come with systematically issued Group D call signs. Obtaining such a license and call sign is a necessary first step toward later obtaining a vanity call sign for your club.

(*****
DX

In DX, a North Korean station signing P5BK has been reported active by W6 land stations. The station's activity has been on 15 and 20 meters CW between 22:30 and 00:00 UTC and saying to QSL via JA1BK.
And this for ARRL members making DXCC submissions or using the Outgoing QSL Service. There is no longer any need to remove the mailing label from your QST as proof of membership. The League says to simply make a photocopy of the label or of your membership certificate or wallet card or simply jot down your membership number on a separate piece of paper and send it in with your entry.

(*****
JUDGE WANTS HACKER IN JAIL

And finally, a judge says that federal guidelines don't allow for a long enough sentence to punish a computer hacker -- charged in another case with espionage -- for trying to find out F-B-I secrets. So says United States District Court Judge Manual Real in his rejection of a plea bargain agreement between attorneys for convicted hacker Kevin Lee Poulson and federal prosecutors.
In rejecting the plea agreement Judge Real said he was particularly upset that Poulsen tapped into a computer to get the names of undercover businesses operated by the FBI.

If the name Manual Real sounds familiar it is because he is the same federal judge who sentenced former ham Richard Burton -- the ex WB6JAC to jail for operating a ham station without being licensed.

(*****

And for this week, that's all from the Amateur Radio Newsline. You can write to us at Post Office Box 660937 in Arcadia California 91066.

Before we go, this quick note for our listeners in Florida and the south east. Effective immediately, the newsline number in central Florida has been changed. The new number is area code (407) 768-7447. The central Florida Newsline outlet is a service of for the Collins Amateur Radio Club of Melbourne.

> Joe Vincent
>

Tech Plus is the class of license earned after passing Elements 1A (5WPM),
2 (Novice Theory) and 3A (Technician Theory). Since you passed your Tech
exam in 1983, you have met all the above qualifications and, in spite of
what is printed on your license, ***YOU*** are Tech Plus.

Tech Plus has all operating priviledges of the Technician (no-code) above
50 MHz plus all Novice priviledges below 30 MHz. This includes 10M CW
(28.1-28.3) and SSB phone (28.3-28.5).

Since you are in the Dallas area, you might check out W5YI ... they have a
very inexpensive, up-to-date, copy of the rules & regulations that would
make a handsome addition to your shack.

Glad to have you back! Ham radio has changed a bit but I think you'll
enjoy it just the same.

>elses lap! :-(

I was given a mod by a friend recently for the HTX-202. Let's see if I
can remember. It said to remove R55 for extended receive and said to
remove several other resistors for extended X-mit. Anyway, I looked at
the schematic and removing R55 will make it so that you are ALWAYS on
low power. I couldn't find the other resistors the mod mentioned. I
wonder who puts out that kind of mod crap and how many people out there
have been doing these "mods" and then returning their "broken" radios
for "one that works".

1121. Jerry Ziliac, CW Instructor, on national radio show

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-17 00:00:00 UTC
From: lenwink@indirect.com
Message-ID: <lenwink.392.00084CA3@indirect.com>
Source record: 248395

Jerry Ziliac will be the guest this sunday, 4/23/95, on the nationally syndicated Ham Radio & More show on the Talk America Network. The show airs live at 6:00pm EST Sundays on 34 stations and via satellite on spacenet 3, transponder 9, 6.8 audio.
Jerry has been teaching morse code for many many years. He has a complete line of teaching aids available. If you want to learn about increasing your code speed, how to first learn morse code, or some history about CW, then don't miss this show. Listener calls are taken on the toll free call-in number at 1-800-298-8255.
The show now airs at our new station, KRKO, 1380am, Seattle.
73,
Len, KB7LPW

The HTX-212 is NOT a Motorola Yaesu or anything else. It is "custom manufactured for Radio Shack in Korea".

Some kind soul took one apart. Maxon is all over the PCB artwork. It is not a Motorola. It looks to me like Rat Shack worship has taken a huge leap of faith. Not a Motorola Ed no matter how much you want it to be. Not a Yaesu either; you pays your money, you takes your MAXON.

Ne> the Sun computer I'm using right now.

I certainly wish we had some state of the art equipment. The much ballyhooed
National Airspace plan bantered about for the last 29 years is a bust.
The technology employed is ten years behind everything else. My PC
has more processing power than many ATC networks in place. The newest
center technology (known as the host computer) still doesn't have enough
room for all the airport identifiers in the US, much less the world.
The busiest corridors, ie NewYork Common IFR room and the West Coast
cooridors are pressure cookers looking to let off steam. Up until about
3-4 years ago most ATC facilities didn't know what a PC looked like.
NATCA (National Air Traffic Controllers Assc) brought the first PC's into
facilities in many cases. And as of 6 months ago, the governent was
purchasing NEW 2400 modemms. Go figure.

1129. Need advice on 20WPM CW

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-17 00:00:00 UTC
From: ignacio@ix.netcom.com
Message-ID: <3mu889$1k2@ixnews4.ix.netcom.com>
Source record: 248403

I've been practicing to get my Extra ticket exams and
have run into a problem with the 20wpm cw requirement.
I can get almost 100% of transmitted code if I'm at
my PC keyboard and type in the transmitted message.
However, if I try writing the message down, as required
in the exams, I'm not able to write that fast using script or
block letters. Mind you the problem isn't the morse but the
face that my hands can't write the letters that quickly
(such as the letter E which requires four writing strokes).

I was wondering if others who have taken the Extra ticket exam
would offer some advice on how to solve this problem.

Thank you in advance

I have a Yaesu FT-890 I use in my shack and want to operate mobile
with this rig. I have a Toyota X-tra cab pickup with a cover over
the bed. I am considering using an Outbacker antenna but have
not decided how to mount it. The rear bumper is a possiblity but
I think performance would be better if I mounted the antenna
higher like over the cab of the truck. I don't want to drill any
holes or do permanent "damage" to the truck and I'm not sure if
magnetic mounts are strong enough.

I would be greatful for any comments or suggests regarding the
instation of the rig and antenna on my pickup.

The noise has been heard for several days. On Saturday night I managed
to communicate with west coast no problems using 3 el beam aimed west.
When switching to a NE 3 el beam, the noise would increase about 25 dB
indicating the noise is coming from European Community or thereabouts.
Noise was very broadband so could be radar experiment of some sort.

52 simplex is 146.52 MHz simplex. That's why you had some problems at
146.50 MHz. This is considered the national simplex freq for ALL two
meter operations (not just mobile or traveling), and it is not unusal to
hear two fixed stations using it. There are other "official" simplex freqs,
but they are relatively uncommonly used and I don't remember them at the
moment. I "scan" .52 when I'm on the highway, but I try to have some local
repeaters programmed into the radio, because that IS where the action is.

I hope this is the correct group to put this question. I'm not sure if anyone can help but I an trying to find out whether it was at all possible to convert these walkie-talkies to the 70cm band. I brought a MX 360 out of curiosity. It is the UHF model but I can't tell if it is high or low band. I think that this particular one was designed for some special use. The guy who sold it seemed to have a lot of them going for dirt cheap and said that the conversion was possible with little difficulty. Though I must say he has lead me on a bit. When I tried to get any specifics from him he tried to avoid a direct answer. Any help or info would be really appreciated, just e-mail.

Thanks,

1135. Hyperlog and IC781

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-17 00:00:00 UTC
From: ys@isr.harvard.edu
Message-ID: <3mu91d$6ks@decaxp.harvard.edu>
Source record: 248409

I am using Hyperlog version 2.25 for daily logging. My PC is
Everex 386 20 MHz with DOS 5.0, and is connected to ICOM IC781
via CT-17 (CI-V Level Converter) from a serial port (COM 3,
03E8, IRQ 5).

Occasionally, I receive a message "Check Radio" on the Hyperlog screen.
When I change the frequency on IC781, Hyperlog still reads it correctly, so
it is not a critical problem. However, it is rather annoying because
I can not key in anything while this message is blinking on the screen.
Has anyone experienced this problem, or does anyone know what might
be wrong?

I checked COM port I/O address, IRQ level, and baud rate for Hyperlog.
I also checked baud rate and other parameters for IC781 from the
CI-V Condition Screen. I set different baud rates for IC781 and
Hyperlog, but I am still getting the same error message. On my PC,
IRQ 5 is not used by any other device. I suspect that the problem
is on the IC781 side, but I just do not know what else to try!

If anybody has any suggestions, advice, or speculation, please let
me know. Thanks!

Do you have access to a laptop? Or a small portable typewriter?

There is nothing in the rules that I know of that would prohibit you from taking such a device with you for the purposes of copying during the code test.

Joseph Moschella <n9yjz@earth.execpc.com> wrote:

> I have roughly 2 decisions to make about DSP filters for my HF rig. I
>have heard wonderful things about the Timewave 59+, but have read good
>things about the JPS NIR-10.

I have been extremely satisfied with my NIR-10. It seems particularly
well suited for voice modes. I've seen glowing reports of the Timewave
products too, but have never used one.

To further complicate things, check out the ad for the new JPS NIR-12
on page 151 of the May QST if you haven't seen it yet. This appears to be
an enhanced version of the NIR-10; offering pretty much the same functions
but with several advantages:

- All functions can be used simultaneously. This was accomplished
through the use of dual DSP chips.
- The bandwidth is continuously variable from 50 Hz to 3200 Hz, as
opposed to the choice of three settings which the NIR-10 has.
- The NIR function includes an "auto" setting, which supposedly
automatically adjusts the NIR level to an optimum point based on
the measured signal-to-noise ratio of the incoming signal.
- All functions operate in real time.
- For experimenters, internal access to the dual DSPs is provided via
RS-232.

JPS offers the NIR-12 for $350, which is what the NIR-10 had originally
been listed as; so I'd expect to see some good deals on the latter.

Hello and thanks for reading this.
I am moving to Lafayette, LA in about 3 weeks and will be looking for a house. I am wondering how restrictive the neighborhoods are against antennas, as I would like to put up a modest beam. In Houston, I'm currently using an "invisible" long wire from my second story window. It leaves a lot to be desired.

Any input as to neighborhoods to look out for or the like would be appreciated. (I've got about 3 months to look so I'm not in any big hurry.

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet mailing list counterparts and complements. It is intended to serve as a guide for the new reader on what to find where. Questions and comments may be directed to the author, Jay Maynard, K5ZC, by Internet electronic mail at jmaynard@admin5.hsc.uth.tmc.edu. This message was last changed on 31 October 1994 to add the discussion of non-Usenet mailing lists and streamline most of the history discussion, and to change the moderator information for rec.radio.info.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions were held on the mailing list, and sent to the mailboxes of those who had signed up for it. When the Usenet software was created, and net news as we now know it was developed, a newsgroup was created for hams: net.ham-radio. The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became progressively higher. First one by one, and then as part of two reorganizations, what was once one group became many. In the process, developments elsewhere on the net were reflected in the groups as they were created, most notably the change to place all of the ham radio groups in one hierarchy.

The collection of newsgroups continues to grow as more people join the net, and as more topics of discussion gain volume, I expect to see more groups be created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the notable exception being rec.radio.swap. There are also a few mailing lists that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them, and not to the groups that aren't. The whole idea of having different

newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec-radio-info@stat.com. Inquires and other administrivia should be directed to rec-radio-info-request@stat.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups rec.radio.amateur.antenna, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas.

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send email with the word "subscribe" on a line by itself to cq-contest-request@tgv.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to

dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

All of the following mailing lists are sponsored to the Boston Amateur Radio Club, as well as some others of local interest. Thanks to N1IST for the information.

qrp-l: This is the qrp mailing list, previously maintained by Bruce Walker at Think.com. It is for discussions about the design, construction, and use of qrp (low power) radios and related equipment.
arrl-ve-list: This is a one-way list, run by Bart Jahnke of the ARRL VEC, for announcements to VEs and VE teams.
w1aw-list: ARRL bulletins, news, and information
newsline-list: Redistribution of Amateur Radio Newsline
letter-list: Redistribution of the ARRL Letter
fox-list: Fox hunting and Radio Direction Finding
fieldorg-l: ARRL field organization discussions
ham-tech: Technical discussions and questions about Amateur Radio
arrl-exam-list: amateur radio license examinations scheduled in the US and in some foreign areas.

To sign up or inquire about these lists, send mail to listserv@netcom.com with the following in the body (subject is ignored) of the message.
<listname> is the name of the list to subscribe to.
To subscribe: subscribe <listname>
To unsubscribe: unsubscribe <listname>
For more information: help
To post (to the two-way lists), send your message to <listname>@netcom.com

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while

still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

SPECIAL EVENTS STATION.... May 27-28, 1995

Jamestown, NY, honors its best known native, Lucille Ball, Memorial Day weekend, with the Lucille Ball Festivle of New Comedy.

The Chautauqua COunty Amatuer FM Association is a collection of South Western NY and North Western Pennsylvania hams in a public service club. The CCAFMA will honor the first lady of Comedy with a commemoritive station, operating 1200-2100Z for two days of the 5 day festival. The station will operate under the callsigns KB2RLK and N2VQD. Some of the operators are
KB2TFO, KB2UBG, N2XUC, KB2SNO, N2YCW, N3PKI, N2GJI, N2XTX, KS2WQ, AC2D

Operations will be in 70cm, 2, 10, 20, 40 and 80 M. Also Planned is an RTTY Fax schedual on 70cm and 20 M.

Western NY Ham's are encouraged to use the 146.880 (-) repeter for QSO's. In the HF bands, look for us in the center of the bands.

SASE and QSL to CCAFMA Box 81, Jamestown NY 14702-0081 for QSL and Special Certificate. For more details and a full schedual, e-mail mhopkins@epix.net or kb2rlk@kb2obb.wny.ny.us.na

I am in the (fun) process of trying to figure out which 2-meter mobile rig I should purchase for my graduation present from years of night school. The antenna will be a Cushcraft mag mount. Here are the ones I am looking at now:
Icom IC-2000H
Icom IC281H
Standard C1208DA
Yaesu FT2200
Yaesu FT2500M
Since postings on newsgroups like this one were what changed my mind on the Kenwood TM-241A (loose face plate connection), the opinions of fellow hams rule the day! Please gents, any options on the mentioned rigs would be greatly appreciated. Post or e-mail me at KC7GMR@AOL.COM. All replies welcome! Thanks and 73! Rick Rivard, still chilly along the Wasach Front!

ignacio@ix.netcom.com (Ignacio Huerta) asks:

>>Mind you the problem isn't the morse but the face that my hands
>>can't write the letters that quickly (such as the letter E which
>>requires four writing strokes).

>>I was wondering if others who have taken the Extra ticket exam
>>would offer some advice on how to solve this problem.

My advice would be "don't print". Yes, E requires 4 strokes if
you print, but it only requires a quick twiddle if you use script.
My CW copying and my writing ability both run out at 35 wpm, and
it's hard for me to imagine someone without a disability not being
able to write at 20 wpm.

I probably couldn't print or do calligraphy at 20+ wpm, but I don't
print much in real life anyway, I gave that up at least 40 yrs ago.
I'm sure it's much easier to get script up to 20+ wpm than it is to
copy CW at those speeds. It's one word every 3 seconds, right??

Logic tells me that the autopatch should be open to you if you state you are having an emergency. I think the partyline mentality applies here a little: a partyline must be yielded in the event of an emergency.

And while with a partyline you must be using a paying person's phone (who helps pay for that partyline), you could be some stranger off of the street who has an emergency and must use the phone.

>established, well-publicized and has been on basically the same set
>of frequencies for years. If ANYONE is doing what you claim "might
>happen", it is KO4TA and his ilk on 75m.

Excuse me, you have got to be kidding right??? K1man does not deliberately iterfere with an ongoing net, the man does it almost every day and is having a ball doing it. He has made public statements such as " I'll beat you to death with tapes", " You can't stand up against my tapes". and many others.

The Georgia Single Side Band Net races like mad to get there 100 or 150 check-ins out of the way before K1MAN startes his tripe. Furthermore K1MAN published a schedule all right. He published a schedule that he was going to use a frequency that was already very occupied!!!! And got a big kick out of it.

If you are going to post your messages please limit them to something you have knowlege of. You obviously are tremendously misinformed or are deliberately trying to do that to others....

>FL>This matter is more serious than what I think the amateur community is
>FL>taking it.

>Nah. Take a survey. There is just NOT an influx of new bulletin
>transmissions deliberately jamming nets. You are using too much zany
>imagination OM!

>FL>I also do not want people to come on the freq. I have been using for a
>FL>hour and just start broadcasting.

>You don't have that problem though, so we shouldn't make laws to try to
>stop imaginary things that MIGHT happen in the future Floyd, it just
>makes zero sense to me.

With the radio turned off, hold down both of the "up/down" keys (these are the keys on the upper right side of the keyboard) and turn the radio on.

1154. FT530 and 800 MHz

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-17 00:00:00 UTC
From: horak@convex.com
Message-ID: <3mtthu$g65@eugene.convex.com>
Source record: 248428

A friend of mine just received a FT530 as a gift and we modded it this weekend. He can tune the 800 band but it's all noise. We tuned around to various points in the band ;-) including the police trunking data channel and his 530 was deaf. I'd like to find out for him if this radio omits the circuitry for 800 on US models or if there is something special to receive 800. Everything else on the HT works fine. I'm not sure what the date code or serial number is.

Thanks!

1156. Yeasu 530 reset problem

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-17 00:00:00 UTC
From: mikea@lsid.hp.com
Message-ID: <D75s2s.A14@hpcvsnz.cv.hp.com>
Source record: 248474

Both batteries in my 530 died at the same time. Unfortunately I have
also misfiled/misplaced by owners manual.

Can anyone give me the reset combination, that is used to reset
the system. Right now it comes up reading 0.00 in the right hand display,
and the only other feature that seems to work, besides on/off is the
light :-)

Thanks in advance.

The question: can you key up if you've gotten your call from
Gettysburg, but your paper license hasn't arrived yet?

dandersn@ix.netcom.com (Duane Anderson) wrote:

>New applicants can actually call up at 5 days after their test and in
>most cases be told of their call sign and now can go on the air with
>that information!

I've got my call (KE6SYU)...can I use my brand-new radio now? The
rules I was tested on say that I cannot transmit until I receive my
license in the mail. However, I've seen more than one post similar to
the one quoted above.

So, which is it? Is there a new ruling that supercedes the rules in
the test? I'm looking for a definitive answer. Thanks!

MOST IMPORTANTLY, since you passed your Tech exam prior to 21 March
1987, you already have credit for element 3B! So while you are at the
ham store, get a code tape and take the 1B exam and become a General.
No time like the present to upgrade!

: have run into a problem with the 20wpm cw requirement.
...
: However, if I try writing the message down, as required
: in the exams, I'm not able to write that fast using script or
: block letters.

Well, I'm not really an expert, but I can copy 20 wpm, and I'm pretty sure if I worked at it I could go a bit higher. I tried, but I never was a good enough typist to copy on a mill or a computer. I used to copy using block letters. Somewhere along the way I developed a style of disconnected script writing that I use only for copying code. Occasionally I run a whole word in one stroke, when I know from context what the word is going to be in advance, but my copy sheets are usually covered with a very wierd looking writing that looks like some kind of strange penmanship exercise.

I've never heard or read of this, as far as I remember nobody ever taught the technique to me, but it works for me.

The answer is yes. I am a VE, but I was wrong on this one. A good friend was one of the first to take the Tech exam in January when the new system finally got rolling. He called me on the Thursday after the Saturday on which he took the test to tell me his new call. He wanted to go on the air right away, but I told him I thought he couldn't until the paper actually arrived. I checked this with the head of the local VE team the next day and found out I was wrong. The new rules allow you to operate as soon as you appear in the FCC database.

I guess the logic is that if you get stopped by an FCC cop he doesn't need to have to ask you to pull out a piece of paper to prove you are legal, he can find that out with a remote check of the database.

As of December 20, 1994, the FCC rules were changed to allow
people to whom the callsign had been issued, but who had not yet received
their paper license, to transmit on any frequency authorized by their
class of license.

>Me too. I worked him a couple of times when I was operating as
>CU3LF in the Azores. Never did get a card out of that lid.
>He must pay for all his gear with the green stamps he gets.

You might be right, but make sure that you do things the right way. I heard Herik during a recent contest when someone was asking about his not having replied to a card, and he told the person to make sure to send the card to France, without mention of Reunion Island - this is an old trick recommended in several DX books, it avoids a mail route that attracts postal thieves. He also corrected a street address for the guy.

Now, maybe this is all just a blind, and it's true that other FR5 stations seem to get QSLs back OK, but you shouldn't always assume that the DX station is keeping the money. A good friend in Singapore found out that a postal employee was stealing most of his mail with $$ or IRCs in them - this went on for over a year, the guy was caught red-handed but nothing was done to him, and the 9V op had to close the P.O. Box and I now do the cards for him. But I'm still getting second and third requests for cards from people who sent $$ 1-2 years ago that never reached him. It's easy for them to think that he was keeping the $$, when of course he wasn't.

In the circs, it might be sensible for FR5DX to get a QSL manager, but I'm not about to volunteer - he makes too many QSOs...

Here we go again. Remember this: the market is there or they wouldn't
sell it. Perhaps it will be followed by more radios (hope so!).
As far as quality - I can tell you from owning one there's NOTHING
wrong with the quality! I don't know where "on the net" you keep
hearing about people returning their handhelds. I'm very familiar
with the store here locally - they've sold a LOT of both the 2m and
70cm handhelds - and NOT A SINGLE ONE has been returned to them.
Don't know what your problem with RS is, but they certainly aren't
going to leave the ham market because you don't like them!

>you pays your money, you takes your MAXON.

You guys are all missing the point. Who gives a damn where
it's made or who made it? The fact is that it's a good
piece of equipment, it has all (or nearly all) the
"goodies", it's widely available, and it's competitively
priced. Sounds like most of you just simply don't want
to believe that RS can actually come up with some decent
ham gear. I can't believe all of you are that much in
love with Yaesu, Kenwood, and Icom to think that they're
the only ones qualified to market 2m rigs!!!
I'm glad to see RS getting more and more into the ham
market with some decent stuff.

I dont know ehere you 'HRO charges more than others' from.
I bought an FT-900. AES quoted $1223, HRO quoted me $1174.
I'd say that about $50 is worth shopping with HRO, wouldnt you?
Peter, KC1QF

1179. Subject: 20m 40m and marine SSB TX options?

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-18 00:00:00 UTC
From: pve@dg13.cec.BE
Message-ID: <2F9359B8@smtp>
Source record: 248321

Please note that any marine TXing must use type-approved radios (in other words, radios that have been approved for the type of operation). The only one that comes to mind is SGC's marine/ham radio that has the channelised channels and ham frequencies. Street price is about $1500. Call HRO for more info or the company, SGC.

Remember that operation on HF is channelise, in other words they (your correspondent) tell you to go to channel 406, not the frequency.

Although you can get a ham radio set to transmit on marine frequencies, it is illegal. On the other hand if you are in the high seas, who cares? well, it is up to you to decide.

Finally, if you have an HF ham radio in a boat and you DONT have a marine SSB radio, the ham radio must not be able to transmit on marine bands, if checked. In other words, the ham radio takes second place. The same for VHF marine.

Best,
Peter, KC1QF

All,

I see plenty of notices about operating in Europe and questions on this point. If anyone is planning to operate in Europe, note the following:

2 METERS
- Most of Europe is on standard repeater frequencies. These are:
145.600 input - 600KHz
145.625 "
145.650 "
145.675 "
145.700 "
145.725 "
145.750 "
145.775 "

and some spaced every 25KHz, starting from 145.6125, input always 600 KHz below (-) (separated 12.5KHz from the ones above).

- SOME repeaters need 1750Hz (I have no idea why; probably because Europe wants to be different; there is no valid reason for the 1750Hz) - it is in some country's regulations !. Others dont. In Ireland you DONT need 1750Hz; repeaters are carrier accessed (except Dublin, needs 1750Hz tone). In Greece, you dont need 1750Hz, use a CTCSS of 88.5 instead. In Belgium, UK and parts of France, Germany, you need 1750Hz.

- The easiest way to get 1750Hz is to have your computer produce the tone (using BASIC, type: SOUND 1750, 100) and tape the sound on cassette. Play the cassette back using a walkman on the microphone input of your radio. It works fine.

70 CM
- 70 cm is a different story. UK and Ireland use repeaters in 433.000, moving upwards every 25KHz, separation +1.6MHz. Most of continental Europe use 430.025, upwards, input +1.6MHz. There is no standard.

- The tone is the same story as for 2 meters.

HF
HF is pretty similar to the US. However;

- There is no legal requirement to operate anywhere specific in a specific mode. Hams do it voluntarily. This gives freedom to get messages across when conditions are particularly bad, such as using the 30 meter band for voice.

- With some exceptions, no international 3rd party is allowed.

- With some exceptions, power is normally specified as anode input x voltage! (yeah I know this is 1995; I wonder if administrations know that)

- Power ranges from 150W input (most of Europe), to 400 watts output in UK, to 750 watts output in Germany to 1500W output (Israel, Jordan).

- 40 meters is only from 7000 to 7100KHz.

- 20 meters offers SSB from 14.100 to 14.350

- 80 meters is from 3500 - 3800.

- 160 meters has more restrictions than any other band with the exception of Ireland where hams get 1800-2000 (with caution on marine channels). Belgium offers just 8 KHz of space on this band with a maximum of 10 watts (yeah sure; hams only use 10 watts on this band and do dx; I am a martian).

- Due to international regulations governing safety of life and the fact that administrations dont want to be seen cold to emergency setups, some countries, such as Germany, have started allowing phone patch setups for emergency use. Press *9 to get emergency service on your DTMF tone pad.

LICENSING TIP
If you are going to Europe, get a reciprocal license from the first country with a local call sign. This is a little more expensive (in Ireland it is $12/year) and use this license anywhere (it is a CEPT license valid in Europe and parts of the Middle east). YOU DONT NEED TO GET ANY MORE LICENSES THEN.

LICENSING COSTS
If you drive a Mercedes, the prices below will be OK for you! The Most expensive is Belgium. A license here costs $65 / year! Ireland is IRP 8/year (about $12). The rest are in between.

If you need anymore info, let me know.

Best,

Peter, KC1QF/ON9CGV/EI4GV/SV0GV

The 1750Hz is an access tone. It helps to avoid accidental
accessing, if more repearers get within reach of a station
during a mobile QSO. So there is a perfectly valid reason.

> - The easiest way to get 1750Hz is to have your computer produce the tone
>(using BASIC, type: SOUND 1750, 100) and tape the sound on cassette. Play
>the cassette back using a walkman on the microphone input of your radio. It

Surely not the easiest way. The easisest way is wistling. Works fine
on some repeaters, on others you have to hit the tone quite accurately.

> - With some exceptions, power is normally specified as anode input x
>voltage! (yeah I know this is 1995; I wonder if administrations know that)
^^^^^^^^^^^^^^^^^^^

Well all European countries I have come across specify the RF
output power and sometimes in the case of ssb the PEP.

> - 40 meters is only from 7000 to 7100KHz.

The rest is packed with high power AM broadcast stations anyway.

Are you new to this hobby Peter?

It wasn't *that* long ago that channelised repeater access tone was
commonplace in the USA. 1500 hz to 3000 hz in steps of 150 hertz, but with
1800 hz being favourite (favorite?) if memory serves me correctly?

> - The easiest way to get 1750Hz is to have your computer produce the tone

A bit drastic. You can normally whistle 1750 hertz accurately for long enough
to access all my local 2m and 70cm repeaters over here near Heathrow Airport.

See '1750 Hz Hospitality', QST Jan 1995 Page 105 - reading between the lines,
the author (WA6PGA) seemed to want the US to dispense with CTCSS in favour of
our antiquated 1750 hz system, or at least have both running together.

15 quid (about $25) in the UK.

1184. European Repeaters...

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-18 00:00:00 UTC
From: hubu@sbox.tu-graz.ac.at
Message-ID: <3n064e$eoq@freespeech.tu-graz.ac.at>
Source record: 248326

Again here is a request for a list of all European repeaters, at least the 2m repeaters...
So if there is such a list, please E-mail me. If there is not, I'd like to know if there other people ' out there' who would like such a list. Cause if there is at least one in each country, I guess I have a solution to our problem:
One HAM of each country simply posts a list with the repeaters of his home country (it will be a pleasure for me to do so for Austria...), and someone merges the posts to one list. So, let me hear some opinions, 73 from Arnold [OE6APF]

The exams normally don't require you to write the copy. If you could borrow a laptop computer, that may solve your problem.

Try using lower case on Es. an e is much quicker to write than an E , although if you are already in the habit of using all blocks, you may find if tough to change.

Message:
Could someone point me to a site where I can FTP a copy of the W5YI petition? I want to quote it when I write my letters to the FCC on why it should not be passed. I have access to WWW, but only for reading. I am unable to download from the Web. Thanks.

1187. Antenna for 2m HT

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-18 00:00:00 UTC
From: EISTM@ccmail.ceco.com
Message-ID: <9503187982.AA798210298@ccmail.ceco.com>
Source record: 248329

Hello Netters :

I am looking for some good antenna for my HTX 202.
I live in a little bit of congested area (Chicago
suburb) and there are few high rise buldings near by.
(Since I live in a 3rd floor apt, antennas which could
be used in apt buildings would b easy 2 install)

Any body has any suggestions / comments ?

I would very much appreciate if you could directly
reply 2 me.

Thanx a lot

73s
Thiaga Manian (eistm@ccmail.ceco.com)

>It's a shame they don't even remember where the name of the business comes from.

It comes from their former mail order leather goods operation. Tandy knows leather, and swivel knives and embossing tools. You shouldn't expect their minimum wage counter help to know much about electronics or retail sales.

Gary

Gee, I expected better of you, Jim. It's the politician who demands
a new law to solve every problem. You're supposed to be a lawyer, try
litigating under current law rather than calling for another law that
will adversely impact many useful hf services, like W1AW, WA3NAN, and
others. If you think a law is going to stop K1MAN, you are sadly
mistaken. He'll just enlist one stooge to make his transmissions
2 way QSOs, and carry on as before. I can hear it now, he'll start
with "Aaahh, Ok Don Don, here's some more of what I was telling
you about what's going on in amateur radio today [start tape]".

Just because you and your family have squatted on 3975 for
decades doesn't convey ownership rights. IMHO, I think the
proper solution is for the FCC to impose quiet hours on
the amateurs involved, and break this jamming party up.
Your post sure would be useful to any enforcement action by
showing *intent* to jam. And certainly, the written threats
of K1MAN show he's also aware of other stations on frequency.
Under 97.101(d), that makes you both guilty.

If W5YI's petition is accepted, the very first time a station
on 3975 makes announcements to the net in general, there's
going to be a call to the FCC monitoring station complaining
about one way bulletin transmissions. Sauce for the goose.

Gary

Based on W5YI's past endeavours I'd say that he also has a vested interest in seeing this thing fly. Just look at the COLEM program and all the garbage you get in the mail from Fred and you'll understand.
